I wish to thank all those induviduals who either responded to the group or via E-mail to me. I called Ramsey Electronics with my order on tuesday and received my SS-70A on Friday, It works great. Thanks again to all those who took a moment of their time to respond.

A happier scanner man!

If you go by the typical poacher stereotype, they couldn't find a radio transmitter if they were standing at the base of a TV broadcast tower. I don't think you have to worry about poachers taking that bridge into the 21'st century and tracking animals for miles with an antenna just to shoot them.

Check out http://www.policescanner.com it's a Real Audio site that
allows you to hear Dallas Police PD & FD, LAPD, DFW Airport ATC, etc.

The Dallas/Fort Worth ATC can also be hear at the following URL:

http://www.audionet.com/simuflite/

The Chicago O'Hare ATC can be heard at the following URL:

http://www.cyberair.com/audio/chiapp/index.html

Wake County Radio Traffic (located near Raleigh NC)

http://www.middlecreek.org/fairview/audio.html

It's a scanner hooked up to a RA encoder

You can hear the following:

Wake County Dispatch
Wake County "Channel Two"
Cary Dispatch (VHF)
Raleigh Fire
Wake County "RESCOM"

Providence Police Live!

http://199.171.167.7/

I only know about the specific scanners I tested. That excludes
Yupiteru and some others. The sample Radio Shack PRO-2042
scanned mixed memory channels fastest.

I think the scanner I tested with the fastest search
speed (5 kHz steps) was probably a BC3000XLT or BC9000XLT.
For other step sizes (e.g., 12.5 kHz) it would be RELM HS200,
BC9000XLT, or BC3000XLT. I'd have to check my notes to be sure.

For the fastest search, I use a spectrum analyzer.

The freq most used by patrol units to talk car to car is 460.525 (Simplex) (PL 179.9). This is known as "Citywide 8", and also as "Channel 5" (due to it's position in the original HT200 and HT220 portables carried by CPD.

Citywide 1 thru 7 may carry some car to car traffic, but not for long periods of time. Narcotics and most surveilences are on the 800 MHz trunked system, and often are in the clear.

Most High band operations are gone.

460.525 is in use all over the city, and anything can be heard on it. The problem is is that you may not want to be close enough to hear it as it is all portables. CPD rarely uses any mobile radios at all.

Message-ID: <19970315160201.LAA12862@ladder01.news.aol.com>
Source record: 204108

these channels are only skytel's in certain parts of the country where
they own the actual stations. other stations are owned by dial page, bell
atlantic, etc.
But these are not the only air ground frequencies..others are in the 800
mhz range, operated by at&t and gte (the 800 mhz stuff is airliners, 454
mhz is private planes)
the 454 mhz is called agras, and actually run by a co in nebraska!!
skytel owns about 50%of the stations, the rest are other owners.
agras coordinates everything.

Since I am fairly new to the scanning world, and have only one scanner as of yet, I was wondering what people thought of the AOR8000. I have a friend that bought one and he likes it. Also, he says that it has full cell-phone frequency capabilities. I thought this was only possible if you purchased one over-seas? Any comments would be appreciated. I really can't see dishing out 700 bucks and not having blocked frequencies being able to be restored. Thanks.

>issue here is how much does the glass absorb if at all.
>
>
Hi there,
In answer to your question does glass absorb signals, the answer is YES
but only to a tiny degree, your big problem with receiving radio signals
in a car or any vehicle for that matter is the faraday cage that the
metal work presents. Ideally you would have a Quarter wave whip antenna
in the centre of the roof of the vehicle for two reasons :-

1) This is usually the highest point on the vehicle.

2) Being placed centrally on the roof you take advantage of the ground
plane that the metal roof presents.

An external antenna almost always improves signal strength and ranks as
important as having a good antenna in the first place. Choosing the
correct length of whip is the big problem with scanning such a wide
bandwidth. You will probally find if you use a longer antenna even
within a car you will get an increased signal strength of most signals
over most portable scanner antennas, sticking it outside will increase
the signal strength again. A cellular antenna is not ideal for receiving
much below about 400MHz so it really depends on where you tend to scan
the most, below 400MHz an antenna about a foot long is better.

To summarize, glass has very little effect on signal strength and when
monitoring signals above 400 MHz using a cellular antenna outside is
probably about as good as your going to get when mobile.
Hope this helps.

>
>have a discontinued PRO-2035.
>anybody out there have 800/900 mhz unlock mods??
>tks.
>

First of all, you won't find a "clip a wire" or "move a diode" type of mod. Also you do not need to unlock any frequencies in the 900Mhz range. There are several mods available for the Pro-2035, they are very good mods, but not all are 800Mhz mods. If you definately need to find a way to receive blocked out, here are a few ways to go about doing such:

1) Virtual Downconverting.....maybe listed the first, but not the way that I would go about opening up this frequency range.

2) Changing out the CPU for a UK/Aus model. If you do this, you might as well get the UK/AUS model CPU for the Pro-2042. It will use the firmware that the Pro-2042 has (which is better than the 2035), such that it will not dupe the frequencies during AUTO STORE. Javiation will set you up for about $65, but the hardest part is soldering 100 microscopic pins....not for the novice!

3) Change out the CPU/LOGIC BOARD. One of the easiest. Get the UK/AUS CPU/LOGIC BOARD for the Pro-2042 and receive the benefits of better firmware. No soldering in this mod, just screwdriver skills and plug & pray. Javiation will set you up for about $140.

4) Get a UK/AUS model of OS535 board. Will open up the ranges, plus get you computer control.

5) Get the US model of OS535 and get the passwords for either the board or for the software that you plan you use for this.

6) Build/Buy a frequency downconverter. Several places for this....Ramsey, Grove, Scannerworld, Durham (Ramsey)...

For the other mods that are available:
A) S-meter
B) Center-Tune Meter
C) Extended delay
D) Automatic Tape Recorder Switch
E) Data Tone Squelch
F) Extended Memory Channels (16,000+....)
G) Computer Interface Channel Programmer
.....others, but it is early and my minds not working correctly yet.

The answer is no. The 2004 is an old scanner and doesn't have any provision for installing a CTCSS decoder. Newer, and not so new, Uniden scanners do have this provision and it's usually an extra-cost option.

If you're on a budget, the BC560XLT would be an excellent choice for the OPP. You should be able to pick up a good used one for less than 100$CDN. I paid 20$ for mine but it wasn't working. I have one myself, but I am not willing to sell. <G>

Cheers!

MDT (Mobile Data Terminal) is a term used by the Motorola Company.
There are many other brands used out there such as DATA911, Kustom, etc.
The big thing coming now days is the MDC (Mobile Data Computer).
MDT's are nothing more then a dumb terminal linked to the main data base
by a radio modem.
If you are dealing with a department that uses the Motorola system, FORGET
trying to get anything. Motorola uses its own programing and hardware and
even if you had an MDT on the channel you wanted, it would not received
anything.. Motorola's MDT 's are programmed for the system and with the
system...very much like the newer cell phones coming out.
Other systems such as DATA911 and Kustom, use a regular computer based
program and if you have a modem that you can change the speed on and
connect it to a scanner, you may be able to receive the data transmitted.
The need to change to speed is that some systems use odd ball speeds such
as
1100, 1700, 800, etc.

Try these: 123.250 Goodyear Blimp (flight test station)
151.612 Goodyear Blimp (ASCB mode, sports)
151.625 Goodyear Blimp (sports)
151.672 Goodyear Blimp (ASCB mode, sports & entertainment)
465.912 Goodyear Blimp
465.937 " "
465.962 " "

Please note these are from an Akron, Oh database, don't know if they
are used in LA.

I have an Icom R 7000. 25-2000 MHZ scanner. It DOES NOT receive cellular but if you want you can buy a converter from Grove for about $90. I bought it used about 8 months ago so I don't know how old it really is. It only has a few scratches on the case but other than that it looks fine. I'm only selling it because i'm going to college and it's too big for me to take with me and I need the money. $800 and i'll pay shipping. Email me if you are interested.
Thanks, Ken

Relevant to concerend Hillsborough County Florida residents.

OPEN BROADCASTING LIVES IN HILLSBOROUGH!
(SOME RESTRICTIONS MAY APPLY)

In apparent generous contrast to many surrounding South Florida counties, Steve Mitchell of the maintenance support section for Hillsborough County informed this writer that the county will make available receive-only police radios to the public at large, upon request. Though lacking specific guidelines for rejection or acceptance of these requests at this time, or any technical specifications on which talkgroups outside those of the sheriff's office that might be included in public programming, the point is that the HCSO will no longer restrict purchasing and programming privileges to the select media or organized crime watch groups as it had originally contemplated.

During the late afternoon telephone conversation today, Mitchell discussed the HCSO study which concluded that many neighboring law enforcement agencies do not make available such radios to the public. In accepting public requests for radio units, Hillsborough County will nobly pioneer the public purchase policy for our region. Mitchell cited an investigation into the practices of the Seattle Washington Police department, which currently maintains a public-purchase policy. As in Seattle, individual citizens will not have to be affiliated with organized media or specific crime watch groups. However, a letter of justification will have to be filed with the department prior to radio programming. Individuals will also have to purchase the radio hardware themselves, which Mitchell says will be $1600 per unit. The quoted amount is almost half that which was initially quoted by a GE/Ericsson official earlier during this campaign.

Many of the unanswered questions regarding this mild but powerful policy shift will only be answered upon actual and repeated implementation. For the time being, this writer and another lone requestor in Temple Terrace (a crime watch leader who might have qualified for programming under the restrictive terms before the policy change) are currently the only two individuals to approach the HCSO for permission to buy such a radio, according to Mitchell. Even in Seattle, WA, where a public purchase policy has existed all this time, Mitchell reports few interested parties. However, the open broadcast movement hopes to improve and exploit the opportunity far beyond the passive state which may have existed beforehand. As a

personal effort, this writer will monitor the process and promote the consumption of these units by as many interested parties as possible.

While the fact that a justification letter must still be sent to the HCSO seems to suggest that people may still be arbitrarily denied programming by the county, the *specific* removal of media or crime watch status from the approval criteria is a major step in the right direction, and does represent a sincere effort by HCSO to balance the right of access to live patrolcasts with obvious security concerns. While criticism may continue to exist over individual requests in the future, the point is that today I, and likely in all of your cases, a radio can be purchased and a pulse taken of local police (or HCSO) efforts. You can keep abreast of crime activity in your area, and continue to exist, if desired, as the positive element in all crime fighting efforts even if only as an agent of awareness.

Individuals wishing to purchase a radio must send a written request, care of Steve Mitchell, at the address following this report.

As a side note it is worth mentioning the other elements of the friendly conversation with Mitchell. HCSO considered cablecasting police transmissions, a particularly and increasingly favored alternative in the eyes of this activist, but it was found to be too complex a solution for now. Furthermore, officials considered phone-casting transmissions (allowing citizens to dial directly into live patrolcasts using their phones), which Mitchell said was rejected on the basis that it would be too impractical for passive absorbtion. He also cited some apprehension about the formation of so-called "notification" networks based on the purchase of these radios, which is a trendy coordination among community radio enthusiasts to broadcast certain events such as fires or accidents over pagers, faxes, and the internet. Such networks are civilian responses to the closed networks taking over public safety communications in many areas. Despite the concerns which arose in regards to this, Mitchell said there was currently no specific restriction to be set on citizens forming such a network with county programmed radios.

On a conclusive note, Mitchell agreed this was a new and important issue, and one that needs to evolve in the wake of progressive radio technology.

The address to write to for talkgroup programming requests, and further instructional information is:

You got me to drag out my 580 and check out this function. Though it really is just a two frequency scan, it is not a true dual frequency receive function. My TH78A will receive two freqs in the same band at the same time. But after checking it out pretty good, it does reduce the sensitivity of either freq by quite a factor.

Hi, I have heard that down-converters allows you to have full access
to your scanner's capabilities. I was wondering if they made these for

handheld scanners (specifically, the PRO-60). I've tried Grove but
the only one they have is for base models and not handhelds. I was
wondering where I could find one for handhelds and if none exists,
could I use the base models for my scanner?

Thanks

>>...mods for the Uniden BC890XLT...
>>...I have one mod which removes 3 chip resistors close to
>> microprocessor and installing the chip resistor at the 2 pads
>> closest to the battery.

What does that mod claim to do???

It surely is NOT the modification to restore the 800MHz band!

BC890xlt - 800mhz full restore

1. remove all cabinet screws.
2. remove 4 face plate screws and 1 bracket screw at center of main board.
3. carefully depress the outside edges of faceplate shield and tilt down.
4. unplug j4 and j5 and ribbon connectors j501 j502 and j503.
5. remove faceplate and logic board.
6. position board so microprossoe chip is on left and memory battery on right.
7. locate the 3 chip resistors at chips upper right..find the one marked
104 and carefully desolder.
8. install the chip resistor at the 2 empty pads closest to memory
battery.
9. reassemble carefully in reverse order.

Test by entering freq. around 870 mhz.

-end-

IMHO, hang onto the PRO2006. I have one that's a few years old also, and there's nothing out there now that I would trade it in for.

You can get more mileage out of your scanner for less dollars if you make some modifications (resto cellular, add an interface for your computer, etc.). There's all kinds of books, articles and info on how to do this.

Because the cellular wants to continue to hoodwink the public into
believing that your conversation on cellular telephones are private.
They can only do that if they can point to a bogus law that says so.
They would never encrypt since that would cost money and they'd have to
pass that on to the customers.

> The other time some said. "Its not one, BYE."

As far as the parties using the cordless phones are concerned, someone
listening on a scanner is completely undetectable, as the scanner is a
"passive" device in that role.
IOW, there's no way that someone on a cordless phone can tell if a
person with a scanner is listening.

> Another thing is that sometimes I can only hear one party talking. I
> can't hear the other side at all. Why is that?

Good question.
It may have something to do with the actual model of phone involved.

Bill

The only dancing going on here is the two-step that you're performing
because you don't wish to admit that you are in error. You're dancing
around the facts in hopes that nobody will notice that you got egg on your
face.

No one can tell you are monitoring. Listening in, in no way interferes
with the signal af the phones.

Also, if you are only listening to the handset to base freq you will
oftentimes only hear one side of the conversation. Listen to the 46.xx
freqs and you will hear both sides.

5342. PRO-43 Modifications FAQ

Newsgroup: rec.radio.scanner
Date: 1997-03-16 00:00:00 UTC
From: gdallal@world.std.com
Message-ID: <E75oH4.GGB@world.std.com>
Source record: 203951

```
Radio Shack PRO-43 Modifications FAQ
<Last modified December 1, 1996>
<altered sections indicated by * in TOC>

CONTENTS

* 1. Introduction
* 2. Out of the box frequency coverage
3. Which units can be modified for extended frequency
reception?
4. Companies that will modify the PRO-43 for extended
frequency reception
5. The modifications
extended receive 800 MHz (original mod + solderless)
* extended receive 6-1000MHz
keypad beep delete
improved audio
attaching an S-meter
400 memory channels
extended receive (30-68MHz for European model)
* 5. Some fixes
* Unit reset
* Freeing from lockup after all banks deselcted
------------------------------------------------------------
1. Introduction

As long as there is a continuing demand for it, this PRO-43
modifications FAQ will be posted every month or so. In large
part, it is the file PRO43.MOD from pub/hamradio/mods/tandy at
oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (800 MHz:
original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter
(5) extended receive (30-68 MHz for European model)

There is also a mod for 400 memory channels, but, to quote
its author, it is very complicated, should only be attempted
by someone with moderate to advanced electronics experience,
and is not for the faint of heart or the "weekend technician."
A brief description is included at the end of this FAQ. If
the mod were included in its entirety, the size of the FAQ
```

would be increased four-fold.
---
2. Out of the box frequency coverage

30-54 MHz
118-174 MHz
220-512 MHz
806-823.9375 MHz
851-868.9375 MHz
896-999.9875 MHz
---
3. Which units can be modified for extended frequency
(800 MHZ) reception?

Note: In the United States, it is against the law
(Electronics Communications Privacy Act of 1987, public law
99-508, amended 1994 by public law 103-414) to listen to
cellular or cordless telephone communications. However, it is
not illegal to own equipment that can receive or can be
modified to receive such communications, even though it became
illegal as of April 1994 to manufacture or import equipment
that could be easily modified by the user to receive cellular
communications. Equipment manufactured before the cutoff date
can continue to be sold until stocks are exhausted. While
businesses are forbidden from importing cellular capable
scanners for resale, the question has been raised whether an
individual can legally import such equipment not intended for
resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive?
The best information is that units sold in the US and Canada
can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

There have been rumors that the correspondence between serial
number and FCC-ID may not be perfect, that is, there may be
some units judged modifiable by the serial number and
nonmodifiable by the FCC-ID, and vice-versa. Anyone with a
such a unit should send a message to gdallal@world.std.com so
that the information can be incorporated into this FAQ.

Date codes: Inside the battery compartment is a paper label
containing the date of manufacture in the form "month A year".
For example, 5A3 is May, 1993. The cutoff date after which
units could no longer be modifiable is April, 1994 (4A4). So
far, the earliest reported date of manufacture of a
nonmodifiable unit is 3A4 (March, 1994). There have been *no*
reports of a modifiable US 3A4 unit. However, there have been

reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number.

Until the rumors surrounding imperfect correspondence between serial number and FCC-ID can be settled, it is better to check the FCC-ID. But be careful. All units have A's in the FCC-ID. Only nonmodifiable units have an FCC-ID that ends in A.

THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand,

quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mod and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

4. Companies that will modify the PRO-43 for extended frequency reception

If you'd rather not do the modification for extended frequency reception yourself, Cellular Security Group, 106 Western Avenue, Essex, MA 01929 (508/768-7486) will do it for $40, which includes insured UPS return postage. However, CSG will not move the diode to extend the low band to 88 MHz; they only remove the diode to unlock the 800 MHz frequencies. When CSG is mentioned on the net, two types of comments follow: testimonials from satisfied customers and comments from those with the technical skills claiming that the service seems high priced for just removing the diode. But, there have been *no* reports of shoddy work or damaged radios. (They've modified two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will perform the mod for $40 plus shipping. They will move (rather than just remove) the diode in units that can benefit from it, but state that there is no way to tell whether the diode should be moved without looking inside. They claim that the determination can not be made from the serial number, FCC-ID, or date of manufacture. For further details, call Grove at 704/837-7081. In order to get a unit modified, a service order number must be obtained from the same telephone number. Packages without a SO# will be refused.

---

5. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out you should not remove but MOVE the diode. Doing so allows cellular coverage as well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone conversations.

The following procedure requires familiarity with microcircuit soldering and will violate your warranty. Grove Enterprises assumes no liability resulting from its attempt, nor will accept the modified scanner for return under any condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

arm@super.org | armille@afterlife.ncsc.mil

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an

xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit), remove the two screws from the lower circuit board. Looking down at the unit, you will see that the screw on right side of the lower circuit board can be easily removed. Remove the screw on the left side by by sliding the screwdriver between the top circuit board and the metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel (antenna, volume, and squelch knobs) along with the top two circuit boards as one unit. The two circuit boards will be connected to the final circuit board (the one attached to the front section of the scanner) by several wires. Simply set the top panel/circuit boards alongside the front section of the scanner and you can leave these wires connected.

Step 5

The microporcessor is located under the large metal shield on the final board (the front section of the scanner with the display and keypad). If you look under metal shield from the side closest to the bottom of the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to remove it completely (unless you want to use it to restore additional frequencies as explained in other MODs), you can just lift one side so it dosen't make connection and then put a small piece of tape or heat shrink over it, so it won't. Make sure it's not lifted to high or the boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD! Hope this helps those of you who do not own a soldering iron!

PRO-43 Shortwave & Extended Receive
Al Mellon N8KLI

ification is only possible on radios able to be modified to receive the full 800 MHz range.)

Scope and nature of the modification: To allow the PRO-43 to receive frequencies from 6 MHz to 1000 MHz. This is accomplished by setting the PRO-43 to non-standard splinter frequencies, the CPU will then step the radio beyond the normal band edges. To derive the non-standard splinter frequencies

it is necessary to change the diode configuration matrix, and to use the monitor-search function. The hardware modification should take about thirty minutes. The remaining programming / search will take as little as 45 minutes (depending on how interested you are in the signals you encounter during the 806 MHz to 30 MHz search to be run).

I made a few attempts to make deals with various radio mod shops. Most felt the time needed to make key pad entries was too long to make a profit.

< This is a lengthy modification. It can be found in its entirety in /pub3/hamradio/mods/tandy/pro43swl.zip at oak.oakland.edu and at http://204.134.124.1:80/kc5kto/pro43swl.html>

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads

the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

---

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

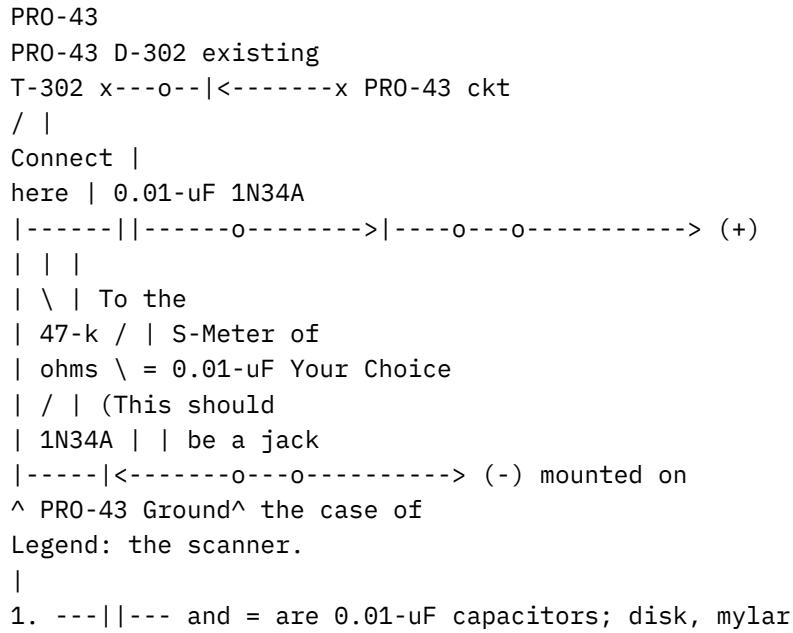
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

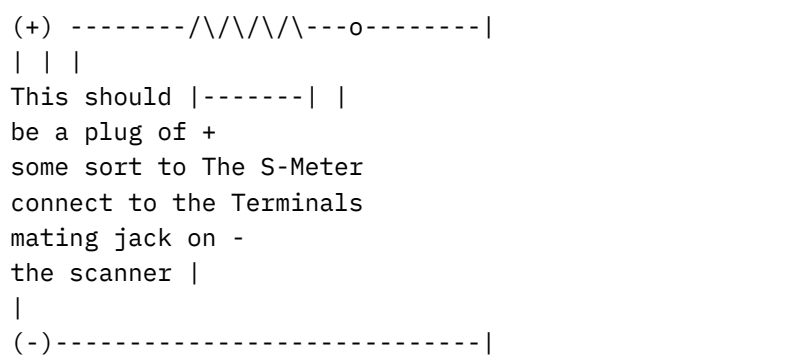
The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



PRO-43
PRO-43 D-302 existing
T-302 x---o--|<-------x PRO-43 ckt
/ |
Connect |
here | 0.01-uF 1N34A
|------||------o-------->|----o---o-----------> (+)
| | |
| \ | To the
| 47-k / | S-Meter of
| ohms \ = 0.01-uF Your Choice
| / | (This should
| 1N34A | | be a jack
|-----|<-------o---o----------> (-) mounted on
^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|
2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode
3. o means a connection, preferably soldered
4. The 47-k resistor is self-explanatory, I hope.
5. -------- and | are wires/conductors.
|
|
6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:



You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my

own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

From: IN%"millingtoj@oldhamlrd-po.oldham.gpsemi.COM"
"John Millington" 17-DEC-1995 04:55:31.71
Subj: RE: pro-43

The European Pro-43 comes with a diode in D1, D3, +D5.
Remove the diode from D5 and solder it in position D2.
The scanner will now cover 30-68Mhz.

Usual disclaimer.

---

6. The fixes

Unit reset (from the owner's manual)

If the keys do not work and the display is random, while
holding down the CLEAR and 0 (zero), turn the power on to
reset the scanner. Note: This clears all the information
Stored in the scanner.

From: IN%"randyrho@nauticom.net" "Randy Rhoades" 14-NOV-1996 00:13:32.24
Subj: Pro-43 Lockup Fix

Several months ago, the unit "locked up". When the radio was turned
on, nothing appeared on the display but the light button worked.
<RS repaired it, snipped>

It happened again.

<RR reports . . . [Before doing this, first try the reset above. GED]>
The problem seems to be in the software. The PRO-43 seems to forget
how to operate if all banks are de-selected. The software prevents
the operator from deselecting all banks but on rare occations this
routine fails. There seems to be no way to recover from this without
surgery. If you know any other way, please let me know.

THE FIX

There are lots of mod articles around describing the disassembly of
the PRO-43 so I'll omit it here. Disassemble the scanner down to
the CPU board and remove the metal shield. CAREFULLY lift pin 3 on
IC 2 so it no longer makes contact with the circuit board trace.
Reconnect the radio module to the CPU board, hold the back cover
in place, and insert the batteries. Turn on the power. The display
will look a little odd, but it will be apparant that the unit is
scanning. Press the number 1 on the keypad until the scan indicator
on the display shows band 1 is operating. Turn off the power and
disassemble the scanner again. Re-solder pin 3, replace the shield,
and reassemble the scanner. It's fixed !

The only trouble with the procedure is that all of your programmed
frequencies are dust. Just reprogram and thank God it works again.

Message-ID: <5ghukm$1m24$4@news.goodnet.com>
Source record: 203964
Cross-posted to: alt.radio.scanner,rec.radio.scanner

i have noticed that when scanning frequencies in the 869-896mhz range, i do find some with a continous buzz saw sound, like on a trunked system...then there are otherfrequencies where I come upon what appears to be telephone conversations. Sometimes the conversation will remain on the same frequency, while other times, a tone burst is heard and the conversation disappears or switches frequencies. sometimes, another conversation will pop up in it's place.

I also have heard phone patches on the 464mhz frequencies, 460mhz police frequencies, 454mhz frequencies, and on some 855-860mhz trunked systems. I think I have heard some in the 935-940mhz aea too!

educate the world..let them know that anything they say on any type of radio phone link can be intercepted by anyone with the proper equipment.

Just to see who's listning, I'd like to talk to someone and mention that there was someone running in the nude on a street corner...would be fun to watch and see who stops by to check the situation out :)

Can anyone share information on Bill Cheek's CE-232 Scanner Board? How well does it work in comparison to the claims? How did the installation go? How easy is the software interface to use?

A friend and I are considering this for use with the PRO-2006 scanner.

Thanks in advance for any information!

I seem to recall that model having an antenna w/ a motorola plug. In my opinion they weren't worth anything new and they don't improve with age. The main problem I see is keeping the plug in place, when the motorola connector on the antenna works loose from the antenna port on the back of the scanner, your reception will take a nose dive. The only thing I know to do in this situation is to curse Motorola for desiging such a piece of junk.... Sorry I can't be of anymore help.

Exactly. what you were thinking was not inline with the post.

Simple explanation.

> i will just leave this as it is and
> allow you your victory...alleged.

No victory, no huzzahs, I don't believe anyone ever considered that
as a goal.

People simply tried to show you something, and you were afraid to
admit they were right.

Have a great evening Bill.

5364. Possible???????????????????

Newsgroup: rec.radio.scanner
Date: 1997-03-16 00:00:00 UTC
From: Doc <root@localhost.com>
Message-ID: <332CA5C8.2BD1@localhost.com>
Source record: 203973

I was recently reading some scanner docs and I came across the this.
I was wondering if it was possible.

Here's another interesting trick: if your listening to someone's cell
call and are within about 30 feet you can hang up their call - First
find their input frequency.. search
824-850 or whatever. add 45 MHz to see if you hear them on the output
along with the phone line audio... then if you add 10.7 to that
frequency (if you have a
radio shack scanner) and punch it in it will generate a low power
carrier on their phone .. because the phone thinks it lost the cell
frequency it will hang up in about 3
seconds.
William

[Here is the Cliff Notes version of this great trick. Print this out and
tack it to your dashboard for those long boring road trips!]
1) Find input frequency
2) Find Output frequency by adding 45 MHz.
3) Add 10.7 (Ace, Icom, Realistic, Regency), 10.8 (Regency, Realistic,
Uniden) or 10.85 (Uniden) MHz to output frequency.
4) wait about 3 seconds on that channel.

5365. pro2006 speed function lost

5368. For Sale: Yupi MVT-7100 handheld scanner

Newsgroup: rec.radio.scanner
Date: 1997-03-16 00:00:00 UTC
From: boscoe@worldnet.att.net
Message-ID: <332b640e.84090@netnews.worldnet.att.net>
Source record: 204012
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

For Sale:

Totally UNBLOCKED (came that way from the factory!) Yupiteru MVT-7100 handheld scanner with the following:

+ 1000 channels
+ Frequency coverage from 530kHz to 1650MHz, including all of the 800

MHz band.
+ AM/FM/WFM/LSB&USB receiving modes
+ Tuning steps as low as 50Hz.
+ Selectable attenuator.
+ lockout on scan and search, etc.
+ Feature loaded!
+ Includes a printout of the Javiation-supplied user guide as well as all original manuals and documentation.
+ power supply

Manufactured by the Japan Radio Corp., received rave reviews around the scanning world. This unit has been used less than 24 actual hours total. No blemishes or scratches.

Would prefer to sell it to someone in the Greenville, SC area so that it can be seen and tested before you purchase.

Radio is in "as-new", fully working condition.

Asking price: $480 US

Respond to boscoe@worldnet.att.net or ses@cheerful.com

5371. MDT experts, advice please

Newsgroup: rec.radio.scanner
Date: 1997-03-16 00:00:00 UTC
From: matt223@mailbag.com
Message-ID: <5gfh5h$ijb@grandcanyon.binc.net>
Source record: 204015

The Fire Department I'm with is considering the purchase of a lap-top to hold site information and go mobile in the "command" vehicle.

Our County is gradually going to MDT's. All Law Enforcement is already on-line, and a few of the larger Fire Departments.

There is no mandate that we follow suit.

My question: Is it a reasonable proposition to use a lap-top as a MDT, in addition to its other capabilities, concurrently? I realize there would have to be a transciever on-board, and that it would probably not be possible to have both "MDT mode" and "lap-top mode" (for lack of better terms) active at the same time.

What I don't know about is if this is already being done elswhere, and if so, what hardware is required.

Thanks for your assistance.

Mark

^^

And *that* is why I am not "heartbroken" that my scanner
cannot receive those frequencies. I previously had a
Bearcat 855XLT. I too, didn't necessarily find listening to
"cellular" conversations all that interesting.

I think the biggest reason for people wanting to modify
their scanners to receive the cellular frequencies is for
the simple reason that Big Brother is telling we the
peons, that we are not "allowed."

I have no experience with these, but if they start on a specific
channel (probably do) it would jump to the first clear channel when
you power up. As I live in a low rent district I can usually find the
neighvours' favourite channel- many can change if they need to.

5381. Help with Pro-43

Newsgroup: rec.radio.scanner
Date: 1997-03-16 00:00:00 UTC
From: neil.bigelow@ns.sympatico.ca
Message-ID: <5gfp6snla1@news1.sympatico.ca>
Source record: 204025

Hello... I am in need for soem information, I have a PRO-43 scanner, and I need to know if it is possible to get the Alligment Procedures for the VVHF (800Mhz End) for this very fine machine, because when I am usning the Search, it seems to be stopping on the correct frequency, but the scaner is OFF frequency in the search, so therefor it is jumping to the next step, but nothing eing there, so it continues with the search!!! But if I Program a particular frequency in a channel, it is fine!! So, hopefully if I run the aligment on that end of the scanner it will rectify the problem!! If a similar problem has ever ocured with this model scanner before to anyone else, i would appreciate a repone VIA E-Mail!! OR if anybody is able to shed some light on this problem, for me or able to provide me with the alligment steps for the top end of the scanner, i would much ap[preciate a responce VIA E-Mail please, as I am unable to get on the NewsGroups everyday to get the message that way.. Thank you everybody again for the use of this newsgroup and I sure do hope that somebody is able to give me some help here..

Neil

5382. Miami,Fl. PD..OUCH

Newsgroup: rec.radio.scanner

Message-ID: <alan-1603970020400001@ppp-mia4-145.bridge.net>
Source record: 204026

First the bad news....Although not personally confirmed,It appears that the Miami, Fl PD will go from Motorola trunking (analog) to using primarily digital text transmissions for most of their dispatching. I overheard this from an unidentified P.O. who claimed to have just had some of this new equipment installed in his patrol vehicle. That would mean that if you do not have a display (screen-monitor) and a receiver capable of decoding/displaying these text messages even the trunktracker will be of little use. Now the good news.......There ain't none.

Source record: 204039

I have both radios....neither works well with the supplied
antennas.(on HF-SW that is). Both improve considerably with a
telescopic whip but for for really good reception a dedicated HF
antenna is essential. Neither radio will perform as well as a set
designed specifically for SW but these are ok.
The Welz will not resolve single sideband communications but the Icom
will....again not as well as a "real" shortwave receiver.
Have a look at your nearest retailer for a longwire kit or one of
those pocket rollup things.....you will need to have a BNC connector
fitted.
If you want an inexpensive SW receiver, check out the Sangean
range...the 909 looks good....but I have not tried it. Mine is an
earlier model with fewer features but I like it.

>Could you find the SW right band to listen them during the day?
>I should like to do this to improve my english comprehension,
>but common medium waves radios get distant stations only by night.

Medium and short wave reception on any extended-coverage scanner is a
BONUS. It should not be the reason someone selects a particular model,
because that is not what these radios are designed to do. The are
designed to receive VHF and UHF transmissions. Because of wideband
receiver design, manufacturers enable reception on lower frequencies; and
some do quite well WITHIN THEIR DESIGN LIMITATIONS. These are:

-wide filtering (poor resistance to adjacent channel interference)
(exceptions: Yupiteru MVT-7200 and -9000)
-poor resistance to overload and intermodulation products
-poor sensitivity with supplied antenna (designed for VHF/UHF).

A shortwave radio, designed as such, costing less than half that of a
wideband scanner, will do MUCH better on all of these.

>Both that radios seems nice to be carried in one's jacket also
>when outdoors, like a small telephone, permitting a good exercise.

You'd need a big pocket for the Icom. It's about the size of a cellular
phone. The Welz is the size of a PAGER.

********* "RARSfest 97" *********

RALEIGH HAMFEST and COMPUTER FAIR

SUNDAY, APRIL 13

NORTH CAROLINA STATE FAIRGROUNDS

3500 attended last year! Giant, all-indoor flea market, plus plenty
of dealers, contests, meetings and forums, prizes, VE Exams, and
the famous "Saturday Night Social."

Location: North Carolina State Fairgrounds, Jim Graham Building.
Follow the Interstate 440 Beltline around Raleigh, to
exit 3 - Hillsboro St., and go west one mile to the
Fairgrounds.

Talk-in directions on the 146.64 Repeater.

Date/Time: SUNDAY, April 13, 1997, 8 am to 4 pm.
(Building opens at noon Saturday and 6 am Sunday for
dealer/vendor setup.)

Admission: Pre-register: $5 (before April 5). Gate: $6.

Flea Market: Table/2 chairs: $10 (5 or more tables: $9 each).
120 Volt AC: $10 per connection.
Drive-In unloading/loading permitted. Bring your
own extention cords and carts. Sorry, no tailgating
in the parking lot. (See address below for
registration.)

Parking: FREE on site!

VE Exams: Exams begin at 11 AM. Bring Picture ID, original
AND photocopy of license and any CSCE's. $6.25.
Contact Vince AA4MY at 919-847-8512 for VE only.

Meetings: ARRL/ARES, NTS, Army and Navy MARS, ATV,
Packet, DX.

-- CONTESTS --

Mobile Enter your mobile station. Separate category for
Contest: VHF/UHF-only mobiles.

Homebrew Enter your homebrew projects.
Contest:

QLF Contest: "QLF" Now try sending with your Left Foot. Yes,
it's an official "left foot" sending contest, with
the largest "straight key" you've ever seen!

QBH Contest: "QBH"??? Now try sending with Both Hips. You'll
have to see, and TRY, this one to believe it. The
biggest set of keyer paddles you've ever seen!
Grass skirts optional, but may affect your chances
of winning (we're not saying which way your chances
may be affected... what shape are your knees in?)

CA$H prizes for 1st, 2nd and 3rd place winners. Not
enough to retire on, but enought to make it worth
your effort. For contest entry information, contact
Rick Merkle KA3PSK at 870-8268, or e-mail him at
ibmrick@aol.com.

General The NC State Fairgrounds hosts a permanent, general-
Flea- merchandise flea-market just outside the hamfest
Market: building. Admission to that flea-market is FREE!

FOR TICKETS For tickets, tables, etc., make checks payable to
AND TABLES "RARSfest." Include your name, call, address,
and S.A.S.E !! Mail to:

Ronnie Reams WA4MJF
SASE REQUIRED! 3509 Rolesville Rd. SASE REQUIRED!
Wendell, NC 27591

Requests received after April 5, or without S.A.S.E.,
will be held at the flea-market vendor door on the west
side of the building.

This year's hamfest is dedicated to the memory of
Rollin Ransom, NF4P (SK).

dies,
^^^^^^^^ ^^^^

The secret is in that 'Nitride' chip and it's not 'core'
memory (being familiar with what's required to feed and
care for 'core' memory from my days in the Defense industry).

If you've ever probed that 'Nitride' chip I think you
will find a voltage of over 100 VDC (yes 100!) that is
required to get the memory feature in that chip to do
it's thing (things have changed a _lot_ since thise days!).

I'm surprised your 101's lasted that long. My 5 V regulator
circuit on the top board died after about 2 years - the
(is it a pass transistor) runs hot anyway - and I replaced
it with one that was chasis mounted.

I had probed around and found band select lines and added
diode switched antenna inputs for the various bands ... _that_
was a while ago ...

The Pro-2036 is the Radio Shack version of the BC890XLT.

HI, I want to know if there is any way someone can notice that some one is listening in on their cordless phone calls (ie: noises, tapping noise) Because one time some one said "Do you hear any hissing sounds?" The other time some said. "Its not one, BYE."

Another thing is that sometimes I can only hear one party talking. I can't hear the other side at all. Why is that?

There are 2 sequences listed in the operating manual:

2+ENTER turns beep off/on
0+CLEAR resets the radio

I found this other sequence which is a test sequence:

1+ENTER test frequency and display test

5411. Mod for BC-8500XLT????

Newsgroup: rec.radio.scanner
Date: 1997-03-16 00:00:00 UTC
From: Paul Racine <racine@ibm.net>
Message-ID: <01bc321c$844ad0e0$51ca2581@willy>
Source record: 204055

Was there ever a listing for a mod for the 8500XLT in Monitoring Times? I am looking for a mod for direct frequency entry of 800 MHz. I realize there is a make-shift mod for the 8500XLT, but that is my last resort...my scanner is dated 1993.

PLEASE POST YOUR REPLY, THANKS.

You seem to know what your talking about, so I'll assume that when you say "FORGET it" you mean MDC, not MDT. Either that or you haven't been reading the MDT posts on the newsgroups lately.

Because the MDT's by Motorla are definitely readable.

Am planning on buying a new scanner sometime in the next 2 to 3 months. Would like any opinions on which one to buy. I now have a Radio Shack Pro 2006, about 5 years old, and would like to get a scanner with PL cababilities. Any suggestions? Oh yea, my price range to buy is no more than $600. Thank you in advance for your suggestions.

You can e-mail me at RSTEEL106@AOL.Com or leave a message here. Again thanks.

I agree that it's not simple, but I wouldn't dismiss the idea of CTCSS decode on a PRO-2004 so quickly. Mine did it. I added a Comspec TS-32P decoder, a cheap frequency counter and a rotary switch via small Tantalum capacitor to the NBFM discriminator output. My PRO-2004 was able to detect, identify and decode CTCSS. The cost of modification parts was far less than that of any CTCSS-capable scanner. In fact, it was cheaper than the add-on board that Uniden sells for its scanners.

My apologies for being "too far advanced for yours and his
grasp"...hell no, I don't apologize no way. Your problem.

Now...I know that you think you are so right and me so wrong
that your agreeing with MR wunnerful is appropro...

Gee...what do I have to do to "make impact on both of your
mind-stems?" Answer: I really don't give a damn.

Here is the scenario: first statement.....
second statement.... which both of you
two have pointed out to my brain-input.

now, stand up and salute the picture of the president guy and
he will forgive you for being so dense....effusively....

i will explain: i referred to the radio shack dancing phones.

go to second statement.

get it. talking about.... here is an ad that shows what
they are "talking about"....get it? If not, GET IT.

here they are dancing answers. Get it. Movement in your
brain and the other lacking-type will commence when you have
completed your hymnal to the First Lady of the Power of the
Unelected.

phones dancing not knowing what they are talking about....

a RS ad... major bucks. major "what?" dancing phones talking

it's like "Farms in Berkeley"....

you have to stretch the mind-stem a bit more that you refuse
to, you and the "other guy"....in this debacle.

just a FYI and a bit of "you really did not listen" to what
the dancing phones are saying....

whooooooooooooossssssssssssh'd you right on by....

bill conduit

I think there's a lot of truth to that. I used to have a Radio Shack scanner that would pick up cell phones (2004?) and sometimes left it on them when I was playing with the computer. I heard a lot of husbands telling their wives they would be late for dinner. I heard wives giving husbands grocery lists. I heard a lot of business related calls. Occasionally I heard something interesting. Like one guy calling his wife to tell her he would be late, and then calling his girlfriend and describing what he was going to do to her in detail that would make Larry Flynt blush. I heard some petty industrial espionage. Most of it was mind-numbingly boring, but the few exciting tidbits kept me coming back for more. If I were to modify either of the two scanners I have now, it would be simply because Big Brother says I can't.

5430. Replacement antenna for handheld?

Newsgroup: rec.radio.scanner
Date: 1997-03-16 00:00:00 UTC
From: playhaus@news.gate.net
Message-ID: <slrn5io9nc.3p.playhaus@news.gate.net>
Source record: 204074

I have a Pro-60, but the rubber duck antenna leaves a little (ok, a lot)
to be desired. I'm looking for a good replacement. I already have a
RS telescoping antenna, but am considering buying an Austin Condor.
Any suggestions? Most of what I want to try to listen to is in the
225-400 MHz range. Would the Condor be any better than the RS
telescoping that I have?

Any help would be appreciated.

If you're on a budget, the BC560XLT would be an excellent choice
for the OPP. You should be able to pick up a good used one for
less than 100$CDN. I paid 20$ for mine but it wasn't working.
I have one myself, but I am not willing to sell. <G>

Thanks Andy
Jo

Thanks; you saved me the trouble.
PS if you ever find some useful tricks or mods (Pro-62) email me.
I'll keep your address and let you test some I may find :-)
Seriously, If I hear anything good, I'll send it along.

You are evidently not very aware of what goes on.

Here in Sourthern MO, I live on the edge of a state forest. We have
LARGE numbers of coon hunters, that use DFing on radio collars on
their dogs.

Picture a 30-50 pickups, running down the back roads, all with yagis
on a roofrack, chasing a signal.

And you don't think any of them poach using the same technology?

Well, take it a bit further. Salem MO, last year, father and son
poacher arrested, newspaper photos with HUNDREDS of racks displayed on
the front lawn of the conservation department that were seized.

Yep, you got it. Also seized was a dfer.

No Joel, what i'd do is duct tape it to the frame of your car after I
put the entrails and other usless parts of the deer in the trunk :)

Careful, there. That may be what the FAA regs say, but many airlines (like Northwest which I flew on yesterday) prohibit the operation of radios at ANY time. I agree, though, that they don't generally care if you carry one onboard.

```
I have for sale a couple of AS-3886-AN Military Discone antennas.
The antenna is 108" tall, folds into a 3 foot canvas bag with shoulder
strap. N connector, rated at 5KW, made by TRW for the TRC-191 system.
Perfect for 6 meters, scanners listeners and military collectors.
I will ship for $200 each including shipping

I also have 102" replacement elements, folds to 36"(3 fold) $10.00 ea.

From: gary.saffer@channel1.com
Message-ID: <40.50155.2433@channel1.com>
Source record: 203788

m>>Does anyone have the Manhattan EMS frequencies, if so would you
m>kindly

m>Manhattan Central and Manhattan South EMS are on a trunked system
m>shared by other administrative EMS units. The freqs are 856.9875,
m>857.9875, 858.9875, 859.9875, 860.9875, 860.7375.

m>Manhattan North is on 855.4875.

From the unofficial FDNY EMS web page, I have Manhattan South as
860.7375. Just for completeness, here is the whole list

Bronx South 477.8375
Bronx North 478.2125
Brooklyn Central 477.8625
Queens 477.9125
Brooklyn North 478.2625
Citywide 478.0125
Manhattan South as noted
Manhattan North 855.4875
Brooklyn South and Staten Island 854.9875

The trunked system is as listed above, minus 860.7375

I got the information on March 3, so it should be pretty much up to
date.

The address, if you are interested is; http//members.aol.com/EMSHighway

The web pages are set up like a Windows program group, very nice. Lots
of information, for both members and non members.

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==========

There is a growing interest in tapping the baseband audio
out of various scanners for decoding of a variety of esoteric
signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and
large, such signals cannot be take from TAPE REC jacks,
headphone jacks, and EXT SPEAKER jacks because of the voice-band
filtering that is done between the signal source and these
output jacks.

Therefore, it is necessary to tap the "baseband audio" directly
at the output of the discriminator chip for your scanner. The
below Table shows a list of scanners, the discriminator chip(s)
used in the scanner, circuit symbols of those chips, and three
pins of general interest on the chips: RF-Input, Scan Control,
and, of course, the baseband audio pin.

Even though your scanner may not be listed below, try to find
its discriminator chip, and chances are it will be listed with
one or more scanners below, the pins of which will be the same
for your unlisted scanner! Corrections and additions to this
list are requested. See my mail and other addresses at the end
of this file.

UNIDEN SCANNERS and Realistics made by Uniden
==========

Uniden does their darndest to make it difficult to
hack their scanners. You guys have some work to
do. Here's the deal: Even though all NFM
discriminator chips have a SCAN CONTROL pin,
Uniden doesn't always use it! Some Uniden
scanners have a separate Squelch circuit with the
SCAN CONTROL pin on the discriminator unused! You
have to find the real Squelch circuit, and then
determine the Logic for that circuit. It's easy,
but differs from one scanner to the next, and I
can't cover them all. I need your help.

See Table 2 below for a good reference. By and
large, those with scanners of Uniden origin have
to tackle the preliminaries in this fashion:

1. Locate the NFM Discriminator chip - you will
find the Audio pin from Table 1. It remains valid.

2. Determine if the SCAN CONTROL pin on that chip
is used. (Follow its trace out on the PCB)

A. If so, then determine the logic order. If
the SCAN CONTROL pin is used, then we can
use it!

B. If the SCAN CONTROL pin is not used,
then locate the real Squelch circuit.
The schematic and block diagrams in
the service manual will be helpful.
Uniden uses chips like NJM2902,
NJM2904 & NJM3403 to generate Squelch
logic. Use your voltmeter to find a
spot where the Squelch logic is 0v and
5 or 8v, depending on the setting of
the Squelch control. Table 2 shows
details for those Uniden-made scanners
with which I am familiar.

TABLE 2

If it beeps, then it works. The difference between slow and fast may
not be all that visible to the eyeball, so use a stop watch and
measure the E.T. on a scan from ch1 - ch400 without the antenna
connected and with the SQUELCH turned all the way up.

The difference should be visible then.

I bought one from Radio Shack. A well made product. My findings for
reception on a scale of 1-10, 10 being best-

VHF-lo- About a 2, very poor.
VHF-hi- 4 to 5, again not very good.
UHF- 6 to 7 although which side of the car you mount it on, can affect
it. This goes for any band.
800MHz- again about a 6 to a 7.

I'd recomend that you try a AM/FM antenna coupler if it's not too much
hassle. I've replaced my antenna with a custom 3/8" 24tpi mount that I
had made from my stock antenna mount at a machine shop for $25. Then I
replaced the stock crummy cable with RG-6. I have a common TV spliter,
one lead going to the car radio the other to the scanner. The car radio
reception got a big improvement, scanner reception is superior compared
to the cell like antenna. Good luck!

I used to live in RB as well (near Rios and Pomerado), and found it to be a terrible place to get RF into (and out of). Get an antenna as high as possible. Just don't let the Architectural Committee see it. ;)
I've since moved back home to Northern Illinois and my copy of "Southern California ScanFan" is sitting in a box in the basement. If you want it I'd be happy to send it to you. Since SD has gone Motorola 800MHz trunked, the new Trunk Tracker would be perfect for you.

Happy Scanning and

5456. ar8000 software blech

Newsgroup: rec.radio.scanner
Date: 1997-03-17 00:00:00 UTC
From: Charles Uibel <cuibel@utah.uswest.net>
Message-ID: <01bc3302$fdaa9f60$48a96ccf@charlesu>
Source record: 203837

I've tried 5 or six of the scanner softare packages and Here Are My Findings:
Rule number 1:
Don't make the software interface more difficult than the radio already is!

Every one of the software packages violates this.

Gripe: You can't import all those frequencies on the Percon disc or from file well. Of the programs that do this, you can't import all the labels for your radio (AR8000). You get a thousand frequencies but you can' t tell what they go to. That's what the POINT IS! Haven't any of these guys ever USED a radio?

They all make you enter the each piece of data BY HAND or you're in for a nightmare!

8k is simple and it does well, but it saves everything to a *.mem (what the heck is that file)
Radio Manager has a neat trick of looking up frequencies while you search, but it crashes at the drop of a hat (I've ruined a ton of hats on that one)
Scancat is a big dos waste. It has a big knob in the middle for scanning that you pretend to tune with your mouse. You have to hit two button just to change direction (What the heck are they thinking?).
Then there is AR8term, which seems like it's cool IF you have Access and IF you don't care about uploading to any particular channel.

Doesn't anyone know how to write a program that just will up/down load mass freqs "cut and paste" style without all the stupid graphic "birdie" pictures?

Thank you and good-night

>>>
>>> a:Grundig Yacht Boy 400
>>> b:Radio Shack DX-390
>>> c:Radio Shack DX-224 (tabletop)
>>>

A portable will not perform as well as a good tabletop. The Radio Shack is probably not a good tabletop. The Yacht Boy 400 is a very good radio with the best sound quality in it's class. If you just want to listen to major broadcasters and strong signals, then it is probably your best choice. If you are interested in a portable that can ferret out tougher signals and can put up with slightly inferior audio, then I would recommend the Sony ICF 7600G. This radio receives SSB signals and has a Synchronous Detection circuit to reduce fading on weaker signals. While it does not have selectable bandwidth, the one it has works very well and the ability of the Synchronous Detection to use either sideband gives you an effective narrow bandwidth setting. I bought the Sony.

Paul,
Make sure you have not reversed the connections somewhere on your antenna. Sounds like you are grounding the center conductor. I have an 8500 with external(in the attic) discone with about 100 feet of coax and don't see any problems listening here in Denver.

Message-ID: <E779I5.55q@nonexistent.com>
Source record: 203845
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello All,

I'm still looking for the ultimate scanner to fit my needs. This time, a new feature is needed: Multiple search ranges. Here is what I need:

1. I need to search (not scan from memory channels) within several predefined ranges (at least two). This for example can happen when within a band there is a heavily occupied segment (NOT single frequency but many) which I want to skip over without having to press a skip button multiple times. Thus, I need several search ranges defined. Each should have a LOWER and UPPER limit, and once the upper limit is reached, the search will commence from the lower limit (i.e. loop searching). I'll call them search bank or memory (I hope this doesn't contradict a previous popular usage for these words...). If I cascade two such search banks, then search range will be a concatenation (cascading) of the two search banks (same for more if available).

In addition the scanner must support:

1. FAST search.
2. Search lockout (i.e possibilty to skip specific frequencies during search).
3. The unit should be handheld (preferred) or a mobile 12V unit.
4. A computer interface would be a nice bonus feature.

regards,
techno

(P.S: please email me directly in addition to posting here, so no responses are missed. Thanks!)

>
> They all make you enter the each piece of data BY HAND or you're in for a
> nightmare!

Ok Mister know it all,

Let's see you spend the time to write a program

can you do that?

and can you take the criticism when people tell you that it sucks?

and finally can you put your money where your MOUTH is?

we shall see

Oh and by the way I'm sorry if you would have to do a little work
in inputting the frequencies.

If everything in the hobby was completely automated it would not
be fun anymore.

and some of the software does now read Percon,ect data without
conversion.
(scancat-windows does thats what I am using)

Remember the 10% rule: you have to be 10% smarter than the equipment
you are trying to operate.

> Kirk

I recently bought a scanner beam and was a bit surprised at the flimsy construction, but now that I've had it up in the air for about a month I'm very happy with it. I have it mounted up 80 ft. in a tree. It's been thru several 50 mph wind storms with no ill effects. I also have a Radio Shack discone at 40 ft. and the scanner beam out performs the discone by a wide margin. I use a A-B antenna switch and signals that are unreadable on the discone are perfectly readable on the beam. The biggest gain was in the low band area, 25-100mhz I don't have a S meter to compare the front to back or front to side, but would guess by the sound of the signals that it is in the 10-20 db range. I'm out in the boonies here, so most of my signals are 10-60 miles away. The scanner beam is no more than a tv antenna that has been recut for the scanner freqs. so take that into account. The coax hookup at the ant. is a F connector, so with my long coax run I had to modify a F-PL 259 connector. I see a lot of gripes about Radio Shack on this ng, but it sure is nice to have a outlet for the odd conector or two at 8 pm on a Friday night! For the price and performance the scanner beam is a good deal for me. Hope that is some help to you. Kent N7AYF

seconds to your destination just because you passed me. Now you're sitting
behind the guy in front of me. Sigh.>>

I gotta agree with you here. Then you have the morons who tailgate you on a two lane highway when you're already doing 15mph over the speed limit. I'm not about to go 25mph over the limit so I can be nabbed by a waiting cop so the guy behind me can get home 2 minutes earlier. Now, on the open highway thats a different matter. People regularly pass me when I'm already doing 80mph. I have no problem moving over to the left lane. In fact I prefer having someone faster in front of me as their the ones likely to trigger any blasts of radar thus setting off my detector.

Welcome to my Radio Page, now providing scanning information on the World Wide Web via the W5GB web server! The emphasis is on the scanning hobby, with information about agencies and scanners (including mods!), frequency lists for the United States and elsewhere, and links to sites with similar information. If you would like to make a comment or contribute some information, all you have to do is email me. I hope you enjoy using this page as much as I enjoy maintaining it!

My Artesia ISP (PVT Networks) and I are trying to troubleshoot my PPP connection problems, so hopefully soon I'll have a relatively clean net connection.

WANTED: Four-channel control head and microphone for a Motorola Motrac two-way mobile radio. A remote-mount cable between the radio and the control head would be nifty, too. If you have such a beast and you want to part with it, please contact me at kc5kto@w5gb.nmsu.edu.

[Scanning FAQs | Scanner Mods and Info | Computer Hardware and Software | Amateur Radio | Other Radio Aspects | Other Scanning Web Sites | Newsgroups and Mailing Lists]

Frequency Lists:

[Federal/Military | Other General | By State | Other Countries]

Scanning FAQs and General Information

This section contains some general information on the scanning hobby, as well as answers to many frequently asked questions.

The following works were written by Bob Parnass (AJ9S), periodically posted to rec.radio.scanner, and are as close to scanner FAQs as there are. They're mighty helpful for the neophyte (but read them anyway!).

* An introduction to scanning

* Tips on how to purchase a used scanner

* Tips on finding new frequencies

* How to improve your scanner's squelch

* Repair tips for Bearcat radios, should yours go kaput

Another good source of information for the beginning scannist can be found in Police Call, sold at Radio Shack and some larger radio shops. In addition to having lists of frequencies for your area, it also has a "Listener's Guide Book," which will get you up to speed pretty quickly. Well worth the expense.

Other answers, and general information, include:

* Barry Mulligan's Frequently Asked Frequencies - the place to look for cellular/cordless, TV, VHF maritime, and other frequencies!

* Where to get FCC license data (written by Bill McFaddin)

* Trunked radio information on Peter Laws' page

* The full text of the Electronic Communications Privacy Act of 1986. This is the federal law that makes it a crime to monitor cellular (and now cordless) telephone conversations in the United States of America.

* Tired of listening to the local PD? Want to see what else there is? Take a look at Rich Barron's Stupid Scanner Tricks web page, and learn how to listen to your microwave oven (among other things)!

* Warren Whitby is compiling a Trunked Radio Systems Users Page, which lists users of trunked radio systems. You can email him with updates or additions.

* If you think trunking spells the end of scanning as we know it, then you obviously don't know about Project 25. Find out about it, and about the organization known as APCO, on the APCO International Web Site.

Scanner Modifications and Information

This sections contains information (modification and otherwise) for various makes and models of scanners, including links to FTP sites, and pages which deal with specific models.

DISCLAIMER: I claim NO responsibility if you screw up your rig with the enclosed information!

The Radio Shack Scanner Modification Page contains modification and other information for a number of Realistic/Radio Shack scanners.

Want to tap your scanner's discriminator output to get a clean signal for digital decoding? Look at Bill Cheek's list of baseband output locations for a slew of scanners.

If you don't know one end of a soldering iron from another, COMMtronics will modify your scanner for you. Look at their Mods Information list to find out what mods they'll do to what scanners.

Here is some info on some particular scanners. If you are looking for information on a Radio Shack/Realistic scanner, try the Radio Shack Scanner Modification Page. I might also add a Uniden Bearcat Scanner Modification Page in the future, if there is sufficient demand.

AR-2700:

* Bill Ezell's AR-2700 Page

* AOR PC-Manager for Windows

AR-8000:

* Victor Healey (KI4JE)'s AR8000 Information Page - the mother lode!

* Brian Foote's AR8000 Appendix A - another site with loads of info, including US, UK, and Japanese bandplans.

* John Hollis has instructions detailing how to build a simple serial interface, as well as how to add the 2.5mm jack.

* AR8000 ToolKit Home Page

* AOR PC-Manager for Windows

* The AR8000 Database (version 3) - manages and uploads/downloads frequencies to your AR8000

BC3000XLT:

* Brian Raines' Uniden BC3000XLT Page

PRO-2006:

* Steve Hancock's Pro-2006 Web Page

Modification FTP Sites

Here are links to FTP sites which include modification information for a lot of makes and models of scanners.

* oak.oakland.edu (scanner/ham)

* kilroy.jpl.nasa.gov (scanner/ham)

* nic.funet.fi (scanner/ham)

* ftp.cdrom.com (scanner/ham)

* hamster.business.uwo.ca (scanner/ham)

* ftp.cs.buffalo.edu (scanner/ham)

* bubba.business.uwo.ca (some ham)

Modification Books

Coming soon!

Computer Accessories

Computers are quickly becoming an essential part of scanning. Everything from tone decoding to frequency database managing to full-blown scanner control is being done with computers. Listed below is information about various decoding programs, as well as scanner-controlling hardware and software.

Software packages I've found include:

* Decode DTMF tones with a SoundBlaster (or compatible) card. (pkzipped)

* Decode POCSAG pages (PD-102, pkzipped)

* Decode POCSAG pages (PD-200, pkzipped)

* Ben Saladino KC5IRJ's Frequency Manager for Windows

* RAC Frequency Manager (Dbase-compatible, pkzipped)

* Don't have pkunzip? Get version 2.04 here!

Scanner-controlling hardware includes:

* COMMtronics' CE-232 board (for PRO2004/5/6)

* Optoelectronics' OS-456 board (for PRO2004/5/6)

* Optoelectronics' OS-535 board (for PRO2035/2042)

Scanner-controlling software includes:

* AR8000 ToolKit Home Page

* AOR PC-Manager for Windows (AR2700/AR8000)

* Steve Hancock's Probe Page

* Ben Saladino KC5IRJ's Radio Manager for Windows (AR2700/8000, OS456/535, CI-V interface)

* ScanCat (AR2500/3000(A)/8000 scanners, OS456/535 boards)

* Scan*Star

* ScannerWear

* WAVE demo (Macintosh)

NOTE: Unless specified, all software are assumed to be MS-DOS executables. However, a good source of Macintosh radio-related software can be found on Chris Smolinski's page.

Amateur Radio

This section is by no means conclusive - there are probably too many amateur-radio-related sites to count. These just struck me as being pretty interesting.

Information on Amateur Radio:

* The American Radio Relay League

* Quarter Century Wireless Association

* Part 97, FCC rules & regs

* Federal Communications Law Journal

* FCC Web Server

* Bill Pasternak WA6ITF's Newsline - timely news about what's happening in the world of Amateur Radio. You can read Newsline, or listen to it with RealAudio!

* Ham Callsign database

Links to Other Interesting Amateur Radio Sites:

* The New Mexico State University ARC (W5GB) is the current host of this page (since I'm acting webmaster). Come take a look at the Green Bananas of NMSU!

* The Mesilla Valley Radio Club is another local club with a Web presence.

* Arctic Amateur Radio Club

* North Carolina State University ARC

* Gainesville Amateur Radio Society

* Gator ARC (U. of Florida)

* University of Florida ARC WB4TCW

* Links to Amateur Radio Club pages

* Other links on www.yahoo.com

* More amateur radio stuff...

* Still more ham radio stuff...

Information on Specific Amateur Radio Activities:

* The QRP-L Resource Page

* SAREX information

* Satellite Tracking info

* Current amateur satellite two-line Keplerian elements

* If the above list is too small, try this set of two-line Keplerian elements (240 satellites)

Other Radio Aspects

Yeah, as much as we scanner nerds hate (or love) to admit, there are a lot of other radio uses besides public service. Here are some links to sites which deal with some of these other aspects of radio. I won't attempt to reinvent the wheel here - quite a few sites have already indexed a lot of radio-related pages - so I'll just list some of the more interesting (IMHO) pages here. For an extensive index, try the Shortwave/Radio Catalog.

O-30 MHz:

* Curious about the CB scene in Phoenix, AZ? Check out Robert C. Neff N7ORY's Local CB Radio Information page to get the scoop.

* Nova's CB Q&A and Modification Page has info about tweaking and modding various CB radios. (These mods will probably void type-acceptance, so it's a information only/use at own risk type of thing...)

* If you're into listening to shortwave radio broadcasts, take a look at Byron Hicks' (KC5QNX) Shortwave Radio Schedule Guide.

* The Worldwide Utility News Club is devoted to sharing info on utility (non-bradcast) transmissions.

UHF:

* Robert C. Neff N7ORY's General Mobile Radio Service Information page has what you want to know about GMRS.

800 MHz and up:

* Dr. Who's Radiophone page is the definitive Internet reference for cellular technology, PCS, and wireless data.

* Midnight Communications sells preassembled cell phone programming setups.

Other Scanning Web Sites

These are other sites which have scanner information. Many of the commercial sites also have links to other sites.

[Manufacturers | Vendors | Publications | General Scanning References | Local Scanning Pages]

Manufacturers:

* COMMtronics

* Optoelectronics

* PerCon

* Radio Control Systems, Inc.

* Radio Devices (also has some links)

* SCAN*STAR Software

* Uniden

Vendors:

* AmSoft (also has amateur radio links)

* Com West (also has frequency lists and links)

* Durham Radio Sales & Service, Inc. (also has scanner and ham links)

* Ham Radio Outlet (also has some links)

* Javiation

* Kiwa Electronics

* Lowe Electronics

* Radio Shack

* ScanWare Associates

* Sound Radio Products

* TH Enterprises - a local (Las Cruces, NM) firm which runs The Solar Center and the Las Cruces Radio Center.

* TRS Consultants (also has some SWL links)

Publications:

* artsci Publishing

* Grove Enterprises

* Popular Communications

* U.S. Scanner News

General Scanning References:

* Shortwave/Radio Catalog (LOTS of links!)

* The CARMA BBS Home Page

* Clay Irving N2VKG's Scanning Reference (New York)

* Dan Stark's NF2G Scannist Pages

* John Mayson KC4VJO's Radio Page - has links to all aspects of radio

* Ron Katz's Ontario Radio Frequency Directory - an excellent source of Ontario frequencies and information.

* The Scanner Club

* John Herndon's Scanner Enthusiast Page - lotsa various info and freq. lists

* Victor Healey KI4JE's AR8000 Information page

* Jim Fordyce's Long Island Area Scanning Resources - covers the entire Northeast!

Regional Scanning Pages:

These (and other) links can also be found in the Frequency Listings by State.

* Dan Rollman KC7ANQ's Southwest Frequency Directory (Arizona)

* Mesa Emergency Group

* Dan Kester WN8T (Tucson)

* Michael Sattler KE6DZF (California)

* Rob Bellville N1NTE (Massachusetts scanner/ham)

* Todd L. Sherman (KB4MNH) (Gainesville, Alachua Co./N. Florida)

* Craig Lindsey (KC5AUG) (Mississippi)

*

* The Intercept Home Page (Washington state)

* repogod's Dallas/Ft. Worth Scanner Page

* Ben Saladino KC5IRJ's Scanning the Dallas/Ft. Worth Area

* The Scanning Band Director Home Page (Ohio - too cool!!)

* Peter Laws' ScannerPage (Arkansas)

* Eddie's Frequency Page (Knoxville, TN area)

* Kevin Rowell (Southern Maine)

* Mike Fink (Southern Florida)

* Odium (Texas)

I also have a short list of scanning-related bulletin boards that you can try out.

Scanning Newsgroups and Mailing Lists

Newsgroups

If you're not already subscribed to any of the following newsgroups, then you're missing out. Take a look at what's currently being discussed on these world-wide forums. (NOTE: If your local ISP doesn't provide some of these newsgroups, you won't be able to read them. Sorry.)

* rec.radio.scanner (mainly US-oriented)

* alt.radio.scanner

* phl.scanner (Philadelphia scanning)

* rec.radio.shortwave

* rec.radio.info

* rec.radio.amateur.misc

Mailing Lists

Here are a few scanning-related mailing lists. The interface is kinda rough right now - hopefully later on I can get some forms cooked up for interactive subscribing.

Join the nationwide SCAN-L mailing list here! Email LISTSERV@UAFSYSB.UARK.EDU and put subscribe SCAN-L [Your Real Name] (where [Your Real Name] is the name your parents gave you!) in the body of the message. You can check out the SCAN-L FAQ for more information.

Federal/Military Frequencies, Etc.

This page has listings for various military installations and government agencies. No guarantees on validity of information, but it's better than nothing.

General Frequencies, Etc.

This page contains information on other miscellaneous radio usage, such as aeronautical (including blimps and the Space Shuttle), railroads, sporting events (including IndyCar and NASCAR), etc. Also included are maritime frequencies, frequency band allocations, and the Internet's original "dot" frequency list!

Frequency Lists by State:

These pages have various frequencies, plus links to other state scanning sites and listserv subscription info. Please email me if you know of or have any frequency lists, sites, listservs, or other information that I don't have, and I'll be more than happy to add it here.

The FCC's Radio Assignment Electronic Data Dissemination Format (RAEDDF) contains various license information extracted from their database.

A list of open amateur radio repeaters by state can be found at ArtSci's Open Amateur Repeaters Page.

Frequencies (and other information) for nearly all US airports can be found on AirNav's Airport Information Page.

If you can't find what you're looking for, search the PerCon Frequency Database.

Content-Disposition: inline; filename="pro51cell.txt"

There is an interesting test mode in the PRO-51 that,
combined with the direct search feature of the scanner, lets
you pick up out-of-band frequencies. You will have full
access to the 66-88 Mhz ranges as well as the cellular base
range of 869-896 Mhz.

Actually, there are several test modes in the PRO-51 (most of
these comments should be true for any Uniden-made Radio Shack

scanner, such as the PRO-46). I'll describe them first and then how to take advantage of one of them to get the restricted frequencies.

There are three data test modes. These modes completely destroy any frequencies you had programmed into your scanner, so it's best to use these techniques before you program your scanner. If you have already programmed it, you'll have to decide if these new capabilities are worth reprogramming.

TEST MODE 0. Clear the scanner.

A well-known method of clearing the scanner to all zeros is to hold down the 2 key, the 9 key, and turn on the scanner. All frequencies will be lost.

TEST MODE 1. Fill channels 1-25 with test frequencies.

Press the 2 key, the 9 key, the L/Out key, and turn on the scanner.

This fills channels 1-25 with these frequencies:

1 30.050
2 40.840
3 49.900
4 138.150
5 162.400
6 173.225
7 406.875
8 453.250
9 511.9125
10 108.500
11 118.800
12 127.175
13 135.500
14 66.450*
15 76.825*
16 87.425*
17 157.800
18 482.3625
19 29.000
20 54.000
21 806.000
22 857.200
23 888.96*
24 911.500
25 954.9125

* indicates not within the PRO-51's normal coverage. More on how to use these in a minute.

TEST MODE 2. Fill channels 1-17 with test frequencies.

Press 2, 9, Manual

Fills channels 1-17 with these frequencies:

30.00, 40.00, 50.00, 140.00, 155.00, 170.00, 410.00, 460.00, 510.00, 54.00, 109.00, 118.00, 127.00, 135.00, 810.00, 860.00, 950.00.

There is also a display diagnotic mode.

TEST MODE 3. Display Test.

Press 2, 9, BAND or 2, 9, MONI.

This put the display in test mode. Every annunciator and every digit element is turned on in a scan from the left side of the display to the right. To keep this test mode continuous, release the buttons before the first scan finishes. This mode does not affect stored memory. Press any key to exit this display mode.

Now, if you've decided to try test mode 1, you will find several out-of-band frequencies stored in your memory channels. Channels 14-16 hold frequencies in the blocked-out 66-88 Mhz range, and channel 23 holds a frequency in the blocked-out cellular base range. Once you have these frequencies stored in a memory channel, the PRO-51's direct search feature will let you search though these ranges. In the cellular band, the scanner searches in the correct 30 Khz steps.

You don't have to keep these frequencies in the channels they were stored by the test mode. You can move them to any channel in the scanner. HereUs how.

First move the frequency to a monitor channel:

While on a channel with one of these frequencies, open squelch completely. Press direct search button, either up or down. The direct search button puts the scanner into search mode and the open squelch holds the frequency. Then press the Monitor button. The frequency is now in the monitor channel indicated in the display.

Now you can move it to any regular memory channel in the scanner:

Enter the channel number
Press PROG
Press MONI
Press the number of the monitor channel if the proper channel is not displayed
Press E(nter)

The frequency is now permanently stored in the memory channel. You can do a direct search from this memory channel

at any time.

5480. Unlock All New Scanners

Newsgroup: rec.radio.scanner
Date: 1997-03-17 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19970317200800.PAA01211@ladder01.news.aol.com>
Source record: 203861

YES! It's true! You can unlock all of the new scanners-
Simply press the "Keypad Lock" button again and the keys will work!
And stop trying to listen to cellular phones, listen to something cool
for a change and then tell us what you find. There's a lot more to this
hobby than eavesdropping on telephone calls.

5481. PRO 51 MODS?

Newsgroup: rec.radio.scanner

5484. Re: Directional corner reflector vertical groundplane antenna info

Newsgroup: rec.radio.scanner
Date: 1997-03-17 00:00:00 UTC
From: jeffl@comix.santa-cruz.ca.us
Message-ID: <5gka3q$t3c@comix.comix.santa-cruz.ca.us>
Source record: 203865
Cross-posted to: rec.radio.amateur.antenna,sci.electronics.design,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Techno (techno@actcom.co.il.NOSPAM) wrote:
In article <E6rJBI.4H@nonexistent.com> you wrote:

: I'm looking for design information and directivity patterns for a
: corner reflector groundplane antenna. This is supposedly a highly
: directional VERTICAL antenna (vertical YAGI'S aren't as directional as
: horizontal ones due to side lobe effects). I want to be able to reject
: strong in-band back as well as side interference in the 900MHz public
: service band. If anyone on this news group has experience or info on
: this subject I would truly appreceate any help offered.

The ARRL antenna manual has a bit on corner reflectors. Be sure
to check out the "trough" style of corner reflector. Your basic
corner relector has about 10dBi gain with zero lobes to the rear.
However, the forward pattern is not a single large lobe due to the
non parabolic reflection characteristics. This is for a reflector
that is a full wavelength high.

You can build a "ground plane" style corner reflector by cutting
the reflector in half (to 1/2 wave high), using a 1/4 wave driven
element sitting on a sheet metal ground plane. There are references
to this style in McGraw Hill "Antenna Engineering" by Jasik 1961.
(This is the ultimate antenna reference manual). The problem here
is that a large part of the signal appears as side lobes in the
VERTICAL plane (toward the sky and above the horizon). I would
not recommend this arrangement unless space is a problem.

You can model corner reflectors with ELNEC, EZNEC or WINNEC antenna
design programs. You will find that simultaneously getting a 50ohm
match and a good pattern is a exercise in compromise. When in
doubt, tolerate the vswr and design for best pattern.

Also, be advised that you can get an exellent cartoid pattern with
a verrrrry deep reverse notch using two identical quarter wave antennas
seperated by 1/4 wave spacing. A 1/4wave electrical 75ohm matching
line from the "forward" antenna. A 3/4wave electrical 75ohm
matching line from the "back" antenna. The two lines are connected
to the feed line with a "T" connector. The two matching lines
bring the impedance up to 100ohms. The T connector parallels
these two to get 50ohms.

Anybody have frequencies for Witchata, KS?

5486. V-Link Communicator Freqs

Newsgroup: rec.radio.scanner
Date: 1997-03-17 00:00:00 UTC
From: Leroy Dickson <KF$EXB@worldnet.att.net>
Message-ID: <332E2816.740@worldnet.att.net>
Source record: 203867

If anyone is curious the freqs for the V-link Communicator, a hand-held cell look-a-like for pre-teens and teens (mostly girls) are as follows.
Channel Freq
1 Calling Freq 916.8750
2 915.8625
3 915.0000
4 914.0875
5 913.3375
6 912.0000
7 910.9125
8 910.2375
9 909.3375
10 908.5000
11 907.6625
12 907.0000
13 ` 906.3375
14 905.6625
15 904.5000
16 903.4865
17 903.0000
18 902.5000

So. slide on by your local school and find out who's hot and who's not. Don't be heart-broken if you discover you're a "complete geek." Little girls don't know what they want yet.

5487. Boise, ID Freq????

No red neck poacher, and I've known a few, has the brains to
track an animal down with this type of equipment. Rest assured
that the dear deer will be left alone now this information has leaked
out. I respect the researchers concerns, but come on.

>can't hear the other side at all. Why is that?

They should not hear anything, since you are really only receiving their
signals, not interfering with them.

To hear both sides of the conversation, tune into the base channels (~46mhz).
The base is much more powerful than the handset. If I can here one side on
the base channel, I have always been able to hear both sides of the
conversation.

Our Sony, which we have had for 10 years and 5 children, picks up
sounds with extreme clarity; but, it seems to be very limited in
broadcast range as I have experimented with my PRO-62. I wish I had had
a scrambled baby monitor--I am paranoid, however. Good Luck.

Howdy,

Just purchased, but have yet to receive, a BC230XLT.

My questions are;

How simmilar is the BC230XLT to it's sister scanners the BC200XLT &
BC220XLT.

Will modifications for the BC200XLT/BC220XLT translate for the BC230XLT
(Mods I'm most interested in are boosted scan speed & Volume control. I
will primarily be using this unit at Nascar/BGN/Indy car races)

Thanks,
dgrove@in.net

Without looking up the features and not being familiar with the three radios you listed I would have to go with the Grundig. I have a small Yacht Boy (not sure of the exact model) and have had better luck with it than I have with most Radio Shack products. Not to mention that I don't care for the lack of intelligent service I get from the local Radio Shack.

mike rice (m26@juno.com) wrote:

: These are the wrong arguments. It is alright to listen
: to portable or cell phone conversations as long as you
: do not report their contents to anyone.

Admittedly, I live in Canada, so I'm not fully up to speed on the legislation of the United States, but I seem to remember reading something somewhere about the ECPA making it illegal to even monitor these calls. Perhaps someone could repost the excellent summary of the legislation here for Mr. Rice's edification.

National borders aside, this isn't the case in Canada either - it's still illegal to monitor. (And either way, I still maintain that phones are perhaps the most boring thing on the airwaves. It was neat for about two weeks, and then I couldn't care less.)

: The notion that
: they will not manufacture equipment to hear them is also
: bogus, at least in the near term. Any $80 Bearcat will
: pick up a portable in the 40 mhz range.

I don't care whether a given piece of equipment can receive them, what I want to see is solid encryption or digital transmission on any wireless communications device. Encryption technology exists today, and it WORKS. It's cheap, effective, and relatively easy to implement. (Has anyone out there used PGPFone?) Granted, if the NSA wants to throw the efforts of its cryptography department at the keys, they're not going to last long but with one-time pads and single use encryption systems, what difference does it make? Securing lines of communications has become almost absurdly simple - speech inversion technology wouldn't prevent serious people from monitoring, but would prevent a large majority of intercepts.

Digital is a less-easy solution, but it's better. It prevents interception *and* maintains a relatively "clean" line. My new digital cordless phone (a Toshiba) has no problems with interference. Digital radio systems provide for the same benefits, with one added bonus: it's easy to install noise filters as well as encryption. A fire department I know of that's switching to a digital trunk in the near future is considering installing a noise filter on its radios - trying to talk over the sound of the engine in some rigs is like trying to scream into a loudspeaker at a rock concert.. kind of futile.

: Until
: all these transmitters switch to data, they are not going to
: stop people from listening.

Which was my point all along. We should be leading the charge to digital or encrypted personal communication devices - secure cellular and cordless telephones.

: heard is even interesting. There are millions of conversations
: out there on the airwaves, but few are of any significance.

Which is why I want to know why so many people are after modifications that will allow their scanners to receive them. I understand the motivation to do something because the government says you can't, but for monitoring purposes.. it's lost on me. I mean, I can think of more effective ways to waste my time.

Hello everyone. I know what image frequency does. For example + or - 21.4 or 21.6 to any frequency that your scanner is not designed to receive. I have tried this for my local police channel (143.1 Durham Police) and it works. It is not quite as loud or clear but it works. My question is that this doesn't seem to work for cb channels. My scanner starts at 30 mhz. Does Image frequency only work for certain mhz. Thankyou.

After a long time there was some Sporadic E reception today herein the Netherlands:
quite some stations from the Ukraine on the East-European FM Broadcast band.
Most interesting was Ukraine TV on channel R1 (audio 56.25 MHZ; while very strong TV signals were visible; logo upper left YT2)
The Ukraine TV station was mixing with 2 other TV stations:
one with a logo like the cipher 2 (upper left), the other was a station with the logo (upper right) DPT 1 (the 1 posed under the P).
Does any body have an idea which (eastern Europe) stations these are?

Another question : on audio TV channel E2 (freq: 53.75 MHZ) around 09.55-09.59 (23 june) UTC I heard an Arabic station, fading in during about 4 minutes: Arabic songs, female announcement.....Arabiyah.....
Anybodey an idea?

Now, around 13.15 UTC TVE Spain has TV signals on chE2 and strong audio on 53.75 MHZ.

> How in the heck do you listen in on a cordless phone? What type of scanner do
>you need? I've never heard of such a thing.
>
Any scanner that can cover the range of 30-50 MHz, or somewhere in the
900 MHz range. Set the scanner to search thru the range at fast speed,
and sooner or later you will find a cordless phone conversation,
providing there is a phone within 1 mile of your scanner. Also, to make
things speedier, narrow the search down to 49.00 MHz to 50.00 MHz, that
will find you several phones in there.

I'm thinking about upgrading my 7100 to the 9000 and I wonder if anyone has one yet and your views on it please.

Thanks,

Neil

If PL tone reception is your major consideration you have three options
1) Buy a radio that decodes them
2) Hook a decoder off the radio
3) Go computer control

For your price range we're probably talking 1 or 2. If you want no fuss then go with 1. If you like to tinker inside the guts of the radio then 2 is for you! Of course you could always add an Opto board to your current 2006 but you'll have to use it with a computer to use PL tones.

Radios today(in your price range) which are CTCSS capable are the BC9000XLT, BC890XLT, and Pro-2045. All three use the same decoder chip I believe, which must be ordered as an option. The only handheld to do PL is the new RELM HS200. I have some more info on the Pro-2045 and HS200 posted on my radio web page at http://www.qsl.net/n2mca/RADIO.HTM if you care to take a look.

The BC9000XLT will run you low to middle $300s, the BC890XLT low to middle $200, the Pro-2045 about $300 and the HS200 around $250.

New radios which are due out in the next few months(hopefully!) are the BC895XLT TrunkTracker and RELM MS200, both of which should have PL capability.

Good luck!

David,
BC220 and BC230 are identical(the BC230 is even stamped as a
BC220 on the bottom of the casing). Totally different from the
BC200XLT.
Have not heard of a scan-speed mod(they're about the fastest
radios out there and you want faster?). And what is this about
"Volume control". I've seen writings about an audio mod for
the SC150.
I myself have no, nor performed any, mods to mine.

Everything I hear about MD seems to be that way.

>BTW, why don't you avoid any problems to begin with and get the heck out
>of the way when someone faster comes up behind you. I assure you, it's
>not a personal attack on your manliness or anything. Funny how some
>people think that whatever speed they choose to drive is the safest speed
>for all on the road. Anyone who dares go faster must be some sicko with a
>death wish.

It's not that, it's just that I don't see the point in passing me just to go another 20 feet in front of me and sit behind the next guy because the beltway is so clogged. It's pretty obvious that you're not going to gain more than 30 seconds to your destination just because you passed me. Now you're sitting behind the guy in front of me. Sigh.

If I'm on an open highway and I see someone coming up from behind me like a bat out of hell and I'm in the passing lane, I make an effort to get out of the way. If I have to downshift into 3rd and push my 1.8L engine to the redline, I'll do it. But I really don't see the point in snarled traffic during rush hour. Everyone is doing the same speed and nobody gets anywhere over anyone else. What's the point in pissing everyone else off by crawling up their ass and flashing your lights just to get 20 feet in front of them and be stuck again?

Tyler

Oh yea, I absolutely adore the people who do that and then don't even have the power in their car to actually pass me when I'm doing the same speed. If you're going to piss me off by flashing your lights behind me in a crowded road and I finally find an opening to let "your highness" around me, and he doesn't have any muscle under the hood, I might be tempted to slam him into the divider just for spite.

This is WAY off topic.

I've been trying to stay away from the Ramsey kit because people have said that kit uses a little higher inversion frequency than is needed. Thus it is said to shift the frequencies of the peoples voices up a hundred khz or so. I tried building the one from the Jan 88 Radio Electronics article, but it sounds HORRIBLE. I can understand a little of what is said by one party, but the rest is just hash. I haven't checked for wiring errors yet though.

Does anyone know if I would have better luck taking the audio from the descriminator output of the scanner instead of the headphone jack?

Tyler

Attention to newbies and scanner-heads...

I have recently added a new antenna page for reference purposes.
Right now, just the antennas for handheld/portables are listed.
I hope to have a comparison for about 20 handheld antennas posted
in about two weeks.

Check out http://www.qsl.net/n2mca/ANTENNA.HTM

For all you newbies lurking out there, I have added some more
"stuff" to my Getting Started page which includes a new page
which lists excerpts from a Monitoring Times article titled
The 15 Biggest Mistakes to Avoid in Buying a Scanner. Check
it out at http://www.qsl.net/n2mca/MISTAKES.HTM and let me
know what you think!

I have had one up for about 5 years now and really like it. I use it in combination with a 2006. It is very directional loosing weaker signals coming in from the side and especially the rear. I live just north of the Twin Cities, MN and point it in that direction and get good signal reception from the southern Twin Cities metro area. I also have the antenna up pretty high to maximixe the LOS. I have also found the Scanner Beam to be quite durable. I has lasted through five Minnesota winters. I do take it down once per year and clean any oxidation off of it and to check the connections.

Techno wrote:

Hello all readers of this newsgroup,

I'm looking for someone who knows the Uniden BC-3000XLT or better
yet,
has it. I'm looking for the meaning of the Frequency Transfer option

mentioned on Uniden's web page. They don't seem to have an email
address for tech questions mentioned there. Can someone help?

Actually, what I'm looking for is a scanner with FAST search
capabilities AND computer interface or at least possibility of
reading
it's current frequency. Ideas, anyone?

The transfer option lets you take a freq from one channel and move it
to another one. This is usefull if you are searching a range of freqs
and stored them in one bank and want to move ones you want to keep to a
different channel bank. When you move a freq from say channel 100 to
channel 200 the scanner will then stay at 200.

If you are talking about kiddie walkie talkies, they are around 49 MHz, but as for the big boys it depends on who is using them. Police, business, Ham, etc. Those frequencies vary greatly from service to service and also within the services.

Ed Wright emw at teleport dot com wrote:
>
> What are good freqs for FM on 6 meters ?

Depends on what part of the country you're in.

Most parts of the US (esp east) most 'machines'
will be found from 53.01 and up in 20 KHz steps with
inputs 1 MHz lower.

Washington State has a 1.7 MHz repeater split and
California has a 1/2 MHz split.

Our 'club' operates 1 MHz and 1/2 MHz machines
north of Dallas.

Freq are 52.71 MHz (Allen) and 52.73 MHz (McKinney)

There is a wider coverage sys in Lewisville on 53.35 MHz.

Simplex is 52.525 (an oddball) and gets really
busy when (and if) the band opens. Made many a contact
on simplex in years past across the country that way.

Jim

af181@freenet.durham.org (Paul Gray) wrote:

>Hello everyone. I know what image frequency does. For example + or - 21.4
>or 21.6 to any frequency that your scanner is not designed to receive.

This is rather simplistic and innacurate. An image is the mirror frequency of the intended received frequency, and is spaced by double the IF value (Intermediate frequency, where most receiver gain and selectivity is acheived) ON THE OTHER SIDE of the LOCAL OSCILLATOR. So if a popular IF freqeuncy for many scanners is 10.7MHz, then that's why you mentioned 21.4MHz. Now it's exact location (below or above the normal receive frequency depends on the design of the receiver: specifically, whether the LO (LOCAL OSCILATOR) is ABOVE or BELOW the received frequency (mostly it's above). The image is the result of insifficient selectivity in the RF stage. The superhetrodyne receiver converts (shifts or hetrodynes) the received frequeny to the IF frequency where it is amplified and more selectivity (adjacent channel) is added. The Hetrodyne process involves mixing the local oscilator signal with the received signal (in the mixer stage), where sum and difference frequencies are created, and only the difference frequency goes through the IF stage (because the sum is as high as the input frequency since the IF is a low frequency). No to the point: The frequency on the other side of the LO is also converted to the IF frequency and gets amplified too (sometimes it is even masks the wanted signal if it's a stronger signal). In some cases, such as cellular reception, people are happy...:-)

Hope this cleared up things a bit (I hope it didn't confuse you even more...:-).

>I have tried this for my local police channel (143.1 Durham Police) and it
>works. It is not quite as loud or clear but it works. My question is that
>this doesn't seem to work for cb channels. My scanner starts at 30 mhz.
>Does Image frequency only work for certain mhz. Thankyou.

In this case, assuming a LO above the intended received frequency, you would receive 30+21.4 = 51.4MHz, not 25MHz CB signals.

Happy scanning!

regards,
techno

(P.S: please email me directly in addition to posting here, so no responses are missed. Thanks!)

Actually the last I heard the Fla rule was that the scanner could not be
"installed" in a car without a ham license or media credentials. Running
the scanner on batteries met the legal definition of "not installed" in the
vehicle and was acceptable.

I have read much of Cheek's material. Clearly, he has done his homework
and has spent a great deal of time and effort researching the subject,
to say nothing of all the scanners that gave their life in his testing
lab.

In spite of this, he left me with the feeling that I am a little waif
that could not possibly survive without his benevolent guidance. This
guy obviously likes himself, and never overlooks a chance remind the
reader that he knows best. My advice would be to look in the index of
articles and buy only the back issues that pertain to your scanner.

No biggie. Just my opinion.

Charlie

5560. B. Cheek's squelch beta Mod, anybody do it?

Wrong I have set up pochers in my area with receiving equipt. (motorola
handhelds) and 2 meter/70 cm beams to track these transmitters.
Also when they'v had problems with surplus night vision equiptment. I aided in
their repair. These people are in it for real. I personally think that
stalking game is more of a sport than sitting in a blind. The pochers I'v
talked to "say" they don't shoot the tagged animals if possiable because they
help them find the heard...

> address for tech questions mentioned there. Can someone help?

According to the BC3000XLT manual... "This procedure lets you transfer
a stored frequency to a channel in another bank." In short, if you have
freq. 154.890 in bank 1 channel 1, you can transfer it to any other
bank / channel combination by using the 'snd' button on the keypad.
Sorry it isn't something more interesting!

It's much more likely that the phone will hop over to another channel
before
the call drops. Also, this won't work if the scanner in question uses
high-
side injection on the first mixer. It also won't work if the scanner
is well
shielded.

In other words, it's a lot of aggro' for a rather dubious amusement!

Cheers!

> sells for its scanners.

I think the price differential between the Uniden CTCSS decoder and
a generic one is very slight. The problem with the PRO2004,5,6 is
that once you set it to a given CTCSS tone it's stuck there. Now,
if you were monitoring the OPP only, this would not be a problem.
However, if you were monitoring everything else (Fire, Ministry of
Health etc) it would be a dead loss. I don't know about most people,
but I set my scan banks to different areas and scan all the pertinant
stuff in each.

The only way to make a PRO200(4?),5,6 sit up and beg is to install
the Opto' PCB. Anything less is simply a dissappointing hack.

The same is true of those Uniden HR2600 radios. Without replacing
the CPU, the radio is very limited.

Besides, the reciever on 800MHz on the PRO2004 isn't that wonderful -
certainly not by today's standards.

Cheers!

Here in Minnesota the State Patrol uses aircraft to catch speeders...but
you can figure out whats going on if you see a small Cessna or Piper
flying low by the freeway... I also listen to them running this on my
scanner and can usually figure what part of the area they are running
this..But they do also use radar.

Doesn't directly answer your questions, but...

As far as I am aware there are no BC230XLT's (or 220XLT's) that have the
frequencies used by US analogue cellular "intact" or "enabled". I could be
wrong though.

The UBC-220XLT (available in Europe) does have the full 800MHz coverage
however the lower VHF portion is 66-88MHz rather than 29-54MHz. It should
also be noted that programmable increment steps are not a feature
on the 230/220XLT's and the default step size in the 800MHz is 12.5KHz.

Hope its of some help.

Chances are that they will be protected by the people that they are covering up for. Did you really believe that these people had the brain power to be able to do this? They couldn't even remember how it happened without their attorney reminding them at the press conference. An attorney provided by the DNC no doubt.
Sounds like someone that sits in one spot with a video camera recording everything in sight for a month and when they get something good they say that they just happened to be in the right place at the right time.

Uniden typically carries a US/Canadian model(cell-blocked) as well
as a European model(not blocked). The US/Can version would be the
BC230XLT while the European version would be the UBC230XLT.

There are a couple overseas places you can get the UBCs from but
you will take your own risk getting it into the country. In other
words, if US Customs decides to confiscate it, it is within their
"right" and you'll have paid for a radio that you'll never get.

5579. Q: Seeking scanner control program that records audio

Newsgroup: rec.radio.scanner
Date: 1997-03-18 00:00:00 UTC
From: jdc@cci.com
Message-ID: <E7930A.DE7@sunsrvr6.cci.com>
Source record: 203746

I'm looking for scanner control software that can search for new freqencies (already available), store the newly-found frequencies (available) and store the scanner audio output along with the frequency (not available).

Many scanners have a search-and-store feature, but all you have after a day's scanning is a bunch of frequencies. You never know what's on them unless something comes on while you happen to be there.

Is there anything out there that can store digitized audio using a soundcard along with the frequency it came in on?

Source record: 203747

Rich,
You should also take a look at the Radio Shack Pro-2042 made by GRE.
The 9000 is a very nice radio and gives a good feature set for a good
price. Most people like the alpha-numeric feature and CTCSS option.
However my 2042 gets lots more use than my 9000. I think it comes
down to personal preferences in the little details...not always that
easy to explain. I like the TUNE feature of the 2042 and it has
better selectivity than the 9000. Find the 2042 display to be easier
on the eyes(contrast) too. 9000 does have better bank/channel
management(25 chan/bank opposed to 100 chan/bank). 2042 has several
useful features for deleting locked out frequencies, moving all
frequencies "down" to fill in empty channela and sort by ascending
and descending order, etc. Keypad is a pain to use on the 2042.
Just for the heck of it, I'll mention the new Pro-2045 which is
a nice radio(made by Uniden). Check my web pages for some more info
on it.
Best of luck!

I was wondering if someone who has done this before could answer the
following questions.

#1.) Once you have downloaded the data file from
(http://www.fcc.gov/wtb/databases.html) and unzipped the file which
program do you use to view the data?

#2.) I have tried ScanWares FCC FRS program with no luck. I can read the
data files they provide at their site
(http://www.wvsc.wvnet.edu:80/~fcc/); However when I try the FCC data I
get nothing.
Whats the problem?

#3.) I have used EXCEL. However this cannot be the best way to view this data.

Hi all readers of this newsgroup,
Is it possible:
1. to make computer interface to BC-3000XLT?
2. to modify BC-3000XLT to receive cell mod?
Yours
Kiz Victor

I am looking to purchase a new scanner and I am looking for suggestions. I currently own a Radio Shack Pro-41. Though I am not pleased with the scanner as a whole, it did spark my intrest in monitoring various utilities, police, fire, etc. What would you suggest for a scanner that covers the 800 Mhz range and falls between $400-$500 (new). I was surpised that I could not find any web pages devoted to this subject (if there are some please post, if not, I may have found a void for someone to fill).

Thanks in advance...

Bill

As a former subscriber to Cheek's WSR, I did not find the newsletter to be
at all worthwhile. There were some good nuggets of information but there
was also a lot of personal opinions about scanning and what I found were
dubious recommendations about computer setups and such. The production
quality was poor as well. If anyone is interested in subscribing, my
advice is to request a sample copy first.

Yeah, at 3 to 8 times the price, too. The Radio Shack counter is excellent, the best unit on the market for the price, and, it takes AA batteries. Old-Tech, but cool.

|Or could I build this type of thing myself?

I've been using a homemade one for years; it's better than the telescoping whip antenna that the PRO-2004 came with years ago, especially on the 46/49-mhz bands. Bob Grove's magazine _Monitoring_Times_ published the dimensions eons ago; basically, you just get a length of coax and strip most of the coax shielding, leaving a short length coax shield at the bottom. I doubt if the actual lengths are that critical for a wideband receiver like a scanner though...

Thanks from me for posting your spam advertisement in rec.radio.scanner!
It helps me to identify companies that I shouldn't do business with! In my
opinion reputable companies do not engage in such tactics. There has been
long and continued discussion about whether companies should post their
crass commercial messages here and the general consensus is that they
should not.

>the net ASAP, the proper order of things is: SECURITY, ACCURACY, SPEED
>in that order. Information which isn't accurate is useless, as you
>have so aptly proven here, and your efforts were nothing but a
>complete waste of time

Lets see:

Security - I doubt that the robbers were watching the internet to find compromising information during the robbery.

I didn't give out the fact that almost any centerfire rifle bullet will penetrate cops, or these robbers 'armor'. I leave this up to the 'official' news orgs.

Nor did I give out other information, that I know the police and others would not like made public, but the gangs (who do have people on the internet) would love to have.

Accuracy - I reported full auto weapons, which they were. Not like some bimbo reporter decrying semi-auto weapons, while the screen is showing brass ejecting from a full auto machine gun at about 700 rounds per minute.

I also reported an H & K rifle, which was NOT on the news. Only cries of AK47 ...AK47... Big difference, both in penetration, rate of fire, etc.

The LAPD was bring up their HRT - Hostage Rescue team even after the other two baddies were down. Why, because they thought they had atleast two more robbers in the bank.

Ask the homeowner whose fence and shed were bulldozed by the Police APC.

Speed -
I got mine onto the net while it was still going down. How soon did you read about it in your National Enquirer?

This is the kind of reporting that gets
>publications like the Enquirer in so much trouble....

But they have no excuse. Theirs is always AFTER the fact, with the benefit of hindsight.

>And what "real data" would you be referring to here? Even the locale
>in your subject line is wrong, or is that just some of the "real data
>about the affair" that is being kept secret?

The L.A.P.D responded to this event, not some N Hollywood outfit - because there is none. NH is surrounded by LA, and most people in the country don't know or care that it is. By saying L.A. it gives a much clearer message to most.

The real information not made public, concerns their weapons and other details of the crime. For example, where did the weapons come from? Were they true , from the factory, fullauto weapons, or were they modified by the robbers? This is critical to the investigation, but either way it's politically incorrect to give out the truth regarding firearms.

If you are one of those people who believe the media, then I suggest you stick to it. Because scanners allow the people to find out what is really going on.

Don't tell me! I bet you believed the official news regarding the LA riots too..

H Higgins

The CUB is 4 times better than the RS piece of shit and only cost $149!
And you don't have to do a sorry ass mod to get the junk to hold a
frequency.
You must like random frequencies a lot....cause thats about all you get
with it.

Yopu can always tell when someone has never owned a good freq
counter....cause if you had one of both you would take the RS unit back
for your money....I did!

Message-ID: <19970318015000.UAA20547@ladder01.news.aol.com>
Source record: 203796

If it is CB freq's you need I got them. Tell me what you need.

Channel 7 27.0350
Channel 7a 27.0450
From Channel 25 to Channel 99
it's 27.255
27.265
27.525
27.550
27.650
Channel 104 is 28.045
Channel 19 is 27.185

Those are some basics, I need to check my rci2950 for the others, 1-17 are tricky, but if you would like I will do it for you.

Was looking for this a while ago and couldn't get an answer so i thought
i'd pass
it along in case someone else needed it...

Hi

A copy of your e-mail to Lowe Electronics (UK) was faxed to me as here
in the UK we are the appointed AOR distributor. From your header of
EST (-0500hrs) I guess you are located in the USA. Our appointed
distributor
in the USA is EDCO:

EDCO, 325 Mill Street, Vienna, VA 22180, USA
Tel: 703 938 8105
Fax: 703 938 6911
e-mail edco@vni.net
WEB http://elecdist.com

A full service manual for the AR8000 is available. Here in the UK price
is
GBP 20.00 plus GBP 5.00 P&P to the USA by air. Most credit cards are
fine for payment.

The discriminator output (NFM) is found on the I.F. board (centre PCB),
TK10489 U1) pin 11 (ground is on pin 19).

Regards, Richard

From: craze@fia.net
Message-ID: <332e31e5.53362984@news.alt.net>
Source record: 203808

I have a question about a scanner (BC230XLT) the web site I found it
on said "Cellular Enabled for oustside the USA".
By this do they mean:
1) they have more than one "model" of this model?
2) they are selling a scanner that is cellular capapble, and if you
live "outside the USA its ok to use this option, but not
otherwise"? ;-}
or
3)they will not sell it to anyone in US?
I checked their order page, and it didnt give a clue, and Im a little
hesitant to call their voice order line and ask this question.

Thanks for your time.

Boy is my wife gonna be pissed if I get a answer I'd like to get
(doubtfull though) and have to spend $200 more on another scanner
after just spending the same amount on a PRO-60, less than 48 hours
ago.
thats what I get for not finding this newsgroup and searching the web
first though.

I've fallen upon this conclusion: When you're scanning in REALLY close proximity of the base, you can cause a minor hum in the handset of the phone. My wife was on the phone once, and I had kicked on the scanner when she was on, and it caused a hum, so she knew I hit her channel due to the hum.

Also, if you're only getting one side of the convo, try scanning the base unit. Usually, the handset transmit is weaker than the base. I programmed all the handset channels in one bank & all the bases onto another, and things seemed clearer with the Bases...

Just remember not to laugh too loud when you hear your upstairs neighbor having phone sex on a cordless.. ;)

You probably have a simplex scanner. You can either get another simplex scanner and keep both on whenever you want to listen to cordless calls so you can hear both sides, or upgrade to a duplex scanner. I think Radio Shack has a number of units that have both simplex and duplex modes. Stop by and ask one of the clerks, I'm sure they'll be able to help.

Hehehe, I laughed my ass off man. =)

I believe this is the same thing that was advertised a few years ago
as "Used Extensively in Desert Storm". Monitoring Times did a short
bit on it, and they contacted the military and asked what they used it
for. It was used to protect people from getting poked in the eye by
thin antennas, and did nothing at all for signal enhancement, nor was
it ever intended to. I think you should save your money.

Yup, whenever you're listening to a cordless phone frequency, all scanners automatically switch to 2-way mode and becomes a duplex transciever. This is a little-known and rarely documented feature that was mandated by the Communications Act of 1964, supposedly to allow communications in a National Emergency (like atomic war). Any background noise in your environment will be heard by the people on the phone.

>Another thing is that sometimes I can only hear one party talking. I
>can't hear the other side at all. Why is that?

You probably have a simplex scanner. 5644. Re: MDT experts, advice please

Newsgroup: rec.radio.scanner
Date: 1997-03-18 00:00:00 UTC
From: mdanielak@mindspring.com
Message-ID: <332e7bc6.61043150@news.mindspring.com>
Source record: 203824

The operation of the laptop's wireless communications software and other software is not nearly as important as the physical differences between a laptop and a ruggedized MDT.

Why choose a laptop? Large storage capacity, fast processors, color displays, and they are less expensive.

Why choose a ruggedized MDT?

The LCD displays and hard drives of the average laptop are not designed to operate in the temperature extremes that many public safety workers operate in. Displays get damaged or respond very sluggishly when things get cold. When they get hot, they loose contrast. Some start to loose contrast about 104 F degrees. Others, are O.K. until about 120 F. Damage can occur at higher temps (150 F or so depending on the unit) that are within the range of what a vehicle parked in the sun can reach.

Hard drives are meant to operate very fast with close tolerances. Getting them to work over a very wide temp range is tricky.

Also, hard disks don't like shock and vibration and there is a lot of specsmanship going on in the industry. For example, I called the manufacturer of a hard drive to ask them about their claim that their drive can withstand 70G's of shock while operating. I said, "by operating, do you mean I can be actually using the disk and reading and writing data while the drive withstands the shock?" The answer was "by operating, we mean that the unit is powered on". My next question was " so how much shock can it take while its really being used?" The answer "about 1.7 or 1.8 G's". So I guess they assumed that all of their users had special software that would sense when the vehicle was in motion and prevent disk access until the vehicle stopped and assumed that their users didn't want any access to anything on the hard drive while the vehicle was in motion.

You have to evaluate your intended application and decide for yourself what is appropriate. If you're municipality has chosen the right mobile data system, you should have the option of using either kind of device at the same time on the network. The large storage requirements of site information may mean that those devices are used only on-site and MDT's are used for remote database look-ups, dispatchs, and messaging.

I hope this helps.

Mike

How much did she charge?

Sorry, I couldn't resist that one. It looks like she's not doing anything judging from her resistivity to give a special council to the DNC FUN raising con.

Yes, just clip jumper L201 (this will void your warranty though so you may prefer to wait). Even if you don't listen to cellular calls, do this as a matter of principle against CTIA lobbying of congress to write utterly stupid laws.

P.S. - I have checked around and many of the PRO-2026 units sitting on Radio Shack's shelves as displays are modifiable. Please scoop them up and modify them.

5673. Help! Interference from computer

Newsgroup: rec.radio.scanner
Date: 1997-03-19 00:00:00 UTC
From: playhaus@news.gate.net
Message-ID: <slrn5j0ucd.t.playhaus@news.gate.net>
Source record: 203503

Let me start by saying that I got a PRO-60 when they were on sale, and I love it.

Now for the question. My PRO-60 doesn't like my computer at all. I can't even use the scanner in the same room as my computer because of all the interference. It's driving me crazy since I don't have this problem with any of my other scanners. The freqs that the scanner seems to constantly stop on are 272.0, 286.4, and 349.x. A great deal of the interference seems to come from my monitor, and turning it off has no effect. :(

Is there anything I can do about this interference from my computer, short of doing my scanning in another room?

Help!

>Happy scanning,
>Andy Entrekin

I had the same problem living in a remote part of CT. I built my
own antenna and now I get ten times the calls as with the stock rubber
ducky. The plans came from a book that RS publishes called
"Antennas: Selection, Installation and Projects". The last chapter has
plans for many antennas including scanner freq. I built mine with #12
uninsulated copper wire, a SO-239 Jack, and some nuts and bolts. Cost
me about $5 total. I put some small hooks in the ceiling, 1 in each room
so that I can attach my 10ft RG-8M coax and attach it to my
PRO-60. This way I can sit in any room and hang the antenna above my
listening post. Construction is simple and requires only a soldering
iron. The book is well worth the $6.99. This summer I plan on buying
an outdoor antenna for the roof, but for now this antenna is great.

The best bet with listening to a scanner on board an airplane is to ask the pilot. If he says its OK, then you're golden. One flight I took in the northwestern states, the pilot let me have it on the whole time. He said he shouldn't let me have it on during takeoff & landing, but it had been his experience that he hadn't had any problems. Always ask the pilot, and you might get lucky.

I expect that you already know the serious answer Blake, but I'll pass it on for those who may not.

A "special product," more commonly called an "SP" is a non-standard Motorola product. This could be anything from "Touch Code" and multi-PL in the MX to Mickey Mouse engraved on the cover of an MX for our friends at Lake Buena Vista. Or the MX radio, delete radio RF deck that we shipped to "Charlie's Angels." With most features in software these days, radio SPs are not seen very often.

Can anyone tell me what the newsgroup for Asutralia is called?
I thought it was aus.radio.scanner but I think that might be wrong.
Please email me at sevenews@iaccess.com.au. Please don't reply here.
Thanks People!!!

David

Well, if you can find a good used pro 2006, this should be your first choice.

The pro - 2005 is good starting material.

A good used pro 2004 is a real good machine. But it will require just a bit more work to bring it up to speed.

Then, there is the new pro 2035. It doesn`t inherently have cell, but with a computer interface, cell becomes available. Pretty good scanner, overall.

This probably due to the stock antenna, which is deaf below the 400 band.
Put a real duckie on it and you'll see it picks up a lot more.

>7. I'm probably just stupid, but I can't seem to figure out how to get both
>sided of a cell conversation. I get one side on the WS1000 (and on my

>ask me

You are listening to cellular base stations that are suppressing the
sidetone. There is no practical way to remedy this using a scanner alone.

Source record: 203587
Cross-posted to: alt.law-enforcement,alt.radio.scanner,rec.radio.scanner

In wake of the Hillsborough County Sheriff's office in South Florida to adopt a public purchase policy for citizens interested in buying police radios as compensation for the agency going to a trunked system, I have scheduled a chat session to discuss and analyze the decision. Pro and Anti open broadcasting pundits are invited to join.

To participate you will need any general IRC client and the server address for AnotherNet. Here are the three current server addresses in which to set in your IRC configuration. If one server is busy, try another:

neato.ca.us.another.net
sunrise.ca.us.another.net
together.vt.us.another.net

Mirc, the most commmon and popular IRC client among savy netters, can be found at the following URL: http://www.mirc.co.uk. However, there are others which can be found on the web and should work.

The #OpenBroadcast channel is registered and therefore active 24 hours a day, even though it may be empty. I am the registered owner of the channel and will do my best to schedule other chat sessions and advise you of them. In the meantime you are free to hang out in the room and talk to whomever. :)

As I say, the FIRST scheduled chat session is set for Saturday, March 29 (two weeks), at 8:00 p.m. I'm hoping at least a handful of you will show up. :) I think it would be great to finally get together and compare thoughts and ideas on all of this in an electronic conference. It should, above all else, be fun!

My handle will be OpenActivist, see you there!

Dave

5697. Best Segment of VHF-HI for police monitoring?

Newsgroup: rec.radio.scanner
Date: 1997-03-19 00:00:00 UTC
From: john.ackermann@daytonOH.ncr.com
Message-ID: <john.ackermann.733.000F564A@daytonOH.ncr.com>
Source record: 203588

My mobile ham rig has a band-scan feature that I've found to be fun while out on the road -- I set it to scan 15kHz steps from, say, 153 to 156MHz to listen to the various police frequencies as I tool along the interstate.

But I've never been sure what's the most productive segment to listen to. The radio doesn't scan particularly fast, so I want to limit the range as much as is reasonable, while still capturing most of the high band police activity. Anyone have any thoughts on what freq range will capture the large majority of the US high band police activity? (I know I'd have to scan pretty wide to get it all -- we have a local PD on 158.88, but nearly all others locally are on 154 or 155 -- or moving to trunking, dadgum it.)

Thanks,

Posted at the Open Broadcasting Website As "The Perfectly Integrated Society" by David Pinero

Afterthoughts on the Hillsborough County Public Purchase Policy
==========

Last Friday, March 14, Steve Mitchell of the Hillsborough County Sheriff's Office made a generous offer to sell this author a police radio in which to enable continued monitoring of the sheriff at work. The offer was made as part of an adoption of Seattle Washington's public purchase policy. It was also made in part by my apparent and vocal discourse over losing the pleasure so once afforded by a simple police scanner, my recommendation to follow the Seattle model, and...what else?

What else indeed. It is no secret among followers of this debate that even when the day came when I might be given the opportunity to purchase such a radio, I wouldn't. I couldn't. The first quoted price of $3,000 by a hasty GE rep eager to get me off the phone and basically bury my ass under a dirt pile of irrelevancy, was astronomical. And for me, Mitchell's quote of $1600 is still out of reach. This is not to say that it's a bad price. Many die-hard hobbyists spend considerably more than that on their shacks and will think nothing about spending that kind of bread on a radio capable of picking up local sheriff patrolcasts. And, though not right away, I do foresee taking advantage of this opportunity at some point. For what you get, $1600 is not bad. You get guaranteed coverage of criminal activity in your area; untrunked signals, and de-digitized communiqu&#65533;. Just like the boys and gals on the beat. Just think: With the same stuff as the police, you'll never have to think about what confounded gear they'll come up next to thwart a listener like you. You'll have what they have. Unless they look to thwarting themselves, they can't thwart you. What a wonderful feeling of assurance.

And this is what Mitchell was offering me. It was great to hear, and I continue to praise them mightily for moving forward with such a generous policy. But during the course of the conversation in which this offer was being made, it seemed apparent to me that I was not getting what I really wanted, which was basically a good attitude. Sure I was being handed a verbal ticket to leave my apartment right away to go pick up my little radio...so's I could keep on scanning, and shut up. No doubt. But I got the feeling...well...that it was killing them. Further questions raised more doubts.

Do you have any written guidelines? "No."

Will programming include fire and medical talkgroups? "I don't have authority for those."

Do you have an e-mail address? "No, but let me give you my phone number." I took this phone number down again regardless of the fact that I was returning his phone call with it. Sometimes we do stupid things for no reason.

Let's face it. It was killing the guy pure and simple. And it's probably killing the department. I was happy when a friendly Mitchell explained how they had taken a good look at surrounding communities to see what they were doing. I was unhappy when he said, almost musically, most don't allow the public to listen in.

Yeah, I know...

I know they don't. And that's the problem. In urging Hillsborough County to move forward with some form of open broadcasting, it was not my intention for them to bemoan how they'd have to offer it while others do not, solely because they were unlucky enough to wind up catering to a crackpot armed with a web page. My intention was, and is, to encourage them to lead and pioneer a new public service component thoroughly referred to as open broadcasting. And for this to work, to *make them see what I see*.

Ah, but what exactly -do- I see? Do I see the hoards of organized criminals snickering over their police scanners in one hand and blow torches working the safe with the other? Yes, I see that. Do I see media hounds loudly wondering why X deputy referred to a citizen as a "nigger"? Yeah, I see that. Do I see some lonely guy running out to the scene of bank alarm to "stop the crook" in the spirit of cop wannabism. I see that, too. Luckily I also see said crooks behind bars (do they really think the cops would fall for something like that more than once?); I see a cop with a bad case of the cynics being humiliated and hopefully cast from the force to work in fast food; and I see a dead cop wannabe who's story of spontaneous heroism teaches everyone else a lesson: Let the *real* cops handle it. In short, sure, I see the cost.

But as a clerk making do with a simple wage and a simple techno lifestyle, I am free to see more. I see, what I've often referred to among friends as "the perfectly integrated society". And as part of such an unreachable utopia, I see the interaction between citizen and police as a single process. There is no sender or receiver, only a unified thought. Whether that thought be of a man dressed in red shoes and a T-shirt running down Main Street after robbing a liquor shop, or of a string of holdups at local convenience stores, it is a thought that occurs to anyone who cares. A social thought.

It is uncontrolled, and real. A felon flees not from a few lone cops into a secure criminal nest, but into a pocket of awareness about what has happened, and who he his. In such a world, his nest becomes

his web, and I see him tangled and stuck to it. I see the certainty of capture dramatically increased.

Does making available a few police radios to the public help in this somewhat grandiose vision of the future? You bet it does - that's why the HCSO is to be praised. But what if we added a good attitude to the mix? What then? What if the conversation with Mitchell had gone more like this:

Do you have any written guidelines? "Yes we do. We compiled all aspects of our study and combined them with input from a local community task force. This information was useful in printing up thousands of community brochures which will be made available at all of our community police stations. We want every citizen to know exactly where they have to go to get a radio, exactly what they'll be listening to, and what to do safely with that information."

Wow. That's great. Will medical and fire frequencies be included? "Our committee discussed that, and of course they'll be included. We want to make sure that everything except the secure channels are made available to the public. How else could this work, right? I'm the man overseeing this project and I'll personally see to it that all possible channels are included in the programming. Furthermore, we're even including a special 'community bollo' talkgroup in which to broadcast community crime information immediately to the public. Our only fear is that we're leaving something out."

That's fantastic. Do you have an e-mail address? "Sure I do. Would head of a highly sophisticated communications operation not have an e-mail address in this day and age? (laughs) It's mitchell@hcso.org. By the way, are you single Mr. Pinero? I'd like to have you over for dinner and let you meet my daughter...."

Oh, okay, I'm going a little far here, but you get the idea.

Attitude. That will make or break the open broadcast movement. And while the HCSO nimbly hands me the opportunity to buy such a radio while stipulating that others make written requests in writing for a similar offer, one has to wonder: Wasn't this *really* their informal policy all along? Had I been the high-falootin' Mr. Important from Important Council who made that call to GE Ericsson a month ago, would I have *really* been denied a radio? Hmmmm....

Whatever. There are signs that I am wrong. Mitchell introduced something innovative that I hadn't even thought of which seems to suggest that some real mental experimentation took place. He spoke of -phonecasting- patrolcasts. That is, allowing the public to dial up and listen in to the police calls over their telephones. Imagine: 1-800-HCSO-COP. Not bad, Mitchell, not bad at all. Just impractical (as they all concluded).

But it is still a seed. Proof that the gist of the open broadcast message fluttered to the Martian soil and mixed with the sparse artic

ice to form a single molecule. Proof that perhaps life is possible on the otherwise barbaric surface of warriors. And, if we allow ourselves to think boldly, perhaps this life is the very beginning of that crazy utopia referred to earlier as the "perfectly integrated society". We'll see.

Dave

$141obo, buyer pays shipping. No COD's, please.

--GCT

"The World's Smallest Mobile Scanning System from Uniden Bearcat."

* Highway Patrol alert with strength meter
* Highway patrol coverage
* Local police coverage
* Pre-programmed scanner covers all 50 states plus Canada
* 9 level strength meter
* Instant weather
* Built-in speaker
* External speaker jack
* Channel lockout
* Memory backup
* Hold Key
* Windshield mountable

The BearTracker is a sophisticated highway alarm system that responds to radio waves emitted from special secondary transmitters installed on most highway patrol vehicles across the U.S. The BCT-10 alarm system informs you both visually and audibly when activity is detected. It also determines signal strength to inform you of the presence and distance of highway patrol vehicles even if they're not using radar!
Features

2 Digit/State LED Display with Pre-Programmed Frequencies -The BCT-10 comes equipped with 866 pre-programmed frequencies which includes all 50 states and Canadian provinces. Just set the BCT-10 for your state and go, the scanner does the rest.

LED Numerical Signal Strength Meter -This lighting fast technology gives you an accurate indication of strength and distance of radio transmissions.

Multiple Coverage -Helps protect you against all forms of speed measurement including Radar, VASCAR, Airplane, Clocking and Laser.

Instant Weather -Automatically scans all NOAA weather channels and two Canadian Coast Guard channels.

Channel Lockout -This feature allows you to skip channels you don't want to hear.

High Gain 360 Rubber Antenna -The BCT-10 uses a highly sensitive antenna to receive radio signals. Adjustable for any mounting situation.

Built-in Speaker -Allows you to monitor law enforcement two-way radio transmissions.

External Speaker Jack -An external speaker jack allow you to add-on a external speaker.

Built-in Scan Delay -An automatic 2 second delay that allows time for reply on the same channel before resuming to scan.

Mute -While warning alarm is sounding, press mute to mute the warning alarms for the duration of warning (until warning LED turns off.) The mute is automatically reset when warning LED turns off.

Memory Backup -The BCT-10 comes with a permamant memory back-up system that remembers your state selection, frequency selections and deletions when you power off the unit.

Hold Key -When the scanning stops on an active frequency, press this key to stay on that frequency. The warning function is disabled in the hold mode. Press this key again to go back to scanning.

Accessories -The BCT-10 includes a "Quick-Clip Release" dual suction windshield mount, visor mounting bracket, cigarette lighter adaptor plug, hard-wired power cord and DC power cord.

Source record: 203600

I'd like to know if the new Uniden BC235XLT Trunking capable scanner has any propensity to cellular overload on 800 Mhz frequencies? I'm told that it is simply a 220XLT with trunking capabilities; dual conversion, as opposed to triple conversion - does anyone have one, and have they experienced cell/paging overload near cell sites or cell phones in use?

5710. DTMF & CTCSS Decoder - SOFTWARE

Newsgroup: rec.radio.scanner
Date: 1997-03-19 00:00:00 UTC
From: rickch19@sgi.net
Message-ID: <5gpa3m$64g$1@taurus.bv.sgi.net>
Source record: 203601
Cross-posted to: alt.radio.scanner,rec.radio.scanner,phl.scanner

The following appeared in alt.comp.shareware, and may be of interest
to scanner users.

Date: Wed, 12 Mar 1997 22:03:44 EST
From: emil@interlog.com (Emil LAURENTIU)
To: MS-News@Simtel.Net
Cc: emil@interlog.com
Subject: dtmff100.zip - DTMF/CTCSS decoder/encoder for SB (uses FFT)
Keywords: simtel,msdos
Summary: Reposted by Keith Petersen
Message-Id: <970312220344.w8sdz@Simtel.Net>

I have uploaded to Simtel.Net:

http://www.simtel.net/pub/simtelnet/msdos/hamradio/dtmff100.zip
ftp://ftp.simtel.net/pub/simtelnet/msdos/hamradio/dtmff100.zip
56832 bytes

dtmff100.zip DTMF/CTCSS decoder/encoder for SB (uses FFT)

DTMF_FFT v1.00 is a DTMF (Dual Tone Multi-Frequency) & CTCSS
(Continuous
Tone Coded Squelch System) generator and decoder. It is also a
spectrum
analyzer program for DOS.

The CTCSS frequencies are generated with less than 0.1Hz error. DTMF
numbers are decoded up to 20 numbers/sec. Visualizing the signal
spectrum (in real time using FFT) helps adjusting the optimum
threshold
level. CTCSS input should be stable for at least 1/2 sec for
decoding.
An AdLib compatible sound card is used as an input/output source.

Minimum requirements: 386, VGA, SoundBlaster

This program is "Cardware". Sources available only on request _after_
receiving a postcard. Uploaded by the author. Freely distributable.

Emil LAURENTIU

Until we get these articles, is it a H/W mod, a keypad trick or
something else?
What's virtual downconversion? Is it easy to implement?

Thank's.

Message-ID: <3330B84F.68AF@worldnet.att.net>
Source record: 203616

First of all I have a couple of questions for you.

1. Are you using an outside antenna? (This cuts down tremendously on my computer noise.

2. What speed is your computer? The higher the frequency your computer runs at the more interference you will get at VHF and UHF.

If turning your monitor off doesn't fix the problem then it is most definitely not the monitor,since MOST monitors don't emmit any RF when they are off. I would suggest unplugging your whole system piece by piece to see what is causing your interference. The only other thing I can suggest is that you use a preselector to attenuate any signals that you do not want to recieve.
Anyway I hope this helps in your diagnostics of the problem. Contact me on the group or by e-mail if you have any more questions, and I will try to help.

Happy Scanning!!!

Cross-posted to: rec.radio.swap,rec.radio.scanner

For Sale:

ICOM R-1 full coverage scanner (no breaks, including cellular, from 10kHz thru 1300 MHz). Radio is in very good condition except for paint flaking off the back panel. There are no scratches or blemishes on the face or display. Price also includes BP-90 six AA battery pack, AC adapter/charger, original antenna and instruction manual.

Features of the R-1 include:
> Uninterrupted coverage from 10KHz-1300 MHz, including military and cellular
> Automatic search-and-store capability
> Built in clock with power-on timer and sleep timer
> Signal strength indicator
> AM, FM and FM-wide modes
> Programmable search range
> Selectable steps of .5, 5, 8, 9, 10, 12.5, 15, 20, 30 and 50 kHz

Retail price of an R-1 is $529.95 and the BP-90 is $28, making the package, not including tax and shipping, worth $557.95 (Amateur Radio Catalog, Winter '96/97 edition, page 11). My asking price is $300.00 US.

Either radio will be shipped free anywhere in the Continental US via UPS. For questions or to arrange purchase, send e-mail to jdc@cci.com or call 716-654-2487 (work) or 716-381-3102 (home before 9 PM EST).

Hey, maybe you can help me. I have a beam also, but I have found
that the upper freqs have just dropped out. To date, I have cleaned the
connections, but with this high dollar satellite cable I have, I hate to
cut off the ends which are nice factory types. I fear however, that
water has been absorbed into the foam of the cable. This may account
for the loss of the upper end and overall lower signal level. What do
you know from your experiences?

Thanks,
David.

I would like to object to the 'redneck' poacher comment. The biggest problem in poaching is not the 'redneck' who poaches an animal for his personal use but a 'professinal' poacher who sells the meat and head for a profit. Don't underestimate anybody who is doing anything for money. If there is money to be made you will always find very intilligent and resourcefull persons involved.

Can we all say ILLEGAL!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
Isn't it against the law to divulge information you get from listening to scanners, especially at the time it is happening. Even the press will supress certain tactical movements during an incident to protect law enforcement and the public at large. This sort of thing is the sole reason for so many systems going to a spread spectrum transmition system which is very expensive to monitor, and is also the reason for many proposals to outlaw scanners. Please don't give them any more political ammunition than they already think they have.

You don't need that if you purchase a duplexing transverter. This is
a device that goes into the feedline to keep the transmitting
frequency from interfering with the receive frequency. Without it,
you'll have a lot of cross-modulation interference and phase
distortion. You may have to have the RS guy order it, since they
don't usually carry it in stock in the smaller stores.

Might want to think about the PRO-60. I have one. Love it!! I looked
at the PRO-62, but for a tad more I could have extended coverage such as
Millitary Air (great for airshows), as well as user selectable mode (AM,
WFM, FM) It all depends on what your listening interests are. By the
way, the pricedoesn't sound to bad.

5760. A little constructive criticism from the consumers

Newsgroup: rec.radio.scanner
Date: 1997-03-19 00:00:00 UTC
From: Charles Uibel <cuibel@utah.uswest.net>
Message-ID: <01bc3448$47662f20$67a96ccf@charlesu>
Source record: 203651

How about a little constructive criticism from the consumers.

A worthwhile discussion on this newsgroup is scanning software. Can you do a little creative thinking about this technology?

Yeah, I'd like to write a program. It starts by thinking about what's there and how it can be improved.

How about this:
Open a spread sheet with 20,000 Percon frequencies. Pick a police frequency. Right-click on it and select "filter by". You get all the police frequencies. Click on county and select "filter by" again. You now have all the police frequencies in the county. Right-click again and select "Upload to radio band A".

Boom- your done. No bird-buttons or spinning gizmo-wheels

Just a few clicks and you're through. But the labels need to be imported as well.

With 1000 channels on the AR8000, It's OK to know what you're listening to.

Did AOR put a little birdie picture on their radio? Why muck it up?

Get the freqs in and out without all the cute duckie-buttons and gif-dials.

Thanks and good night,
Mister Know-It-All (It's hyphenated you know)

PS: You defend scancat because you forked out a bunch of money (I hope).

*** Meant to post this on 3/15 but newsfeed has been down ***

Attended the TICO Warbirds Airshow Saturday in Titusville, FL (3/15/97)

Following freqs in use:

Air Boss - 132.85
Air Boss backup - 126.10
Titusville Tower - 118.90
Titusville Ground ops (before & after show) - 121.85

Security & show ops (local ham club volunteers) - 145.55

Also got the chance to walk through one of the 2 (N42RF) NOAA
WP3 "Orion" Hurricane Hunters. These are well equipped planes
with plenty of "barf" bags which one of the pilots told me
get used often when VIP's come aboard.

http://www.noaa.gov/nchome/lockheed.html

I jotted down the HF freqs from the spotters seat.

A. 3.4070 khZ
B. 5.5620 KHz
C. 5.6100 KHz
D. 6.6730 KHz
E. 8.8760 KHz
F. 10.0150 KHz
G. 13.2670 KHz
H. 17.9010 KHz
I. 21.9370 KHz

Other local freqs of note:

154.3850 - Brevard County Fire North Alert

Brevard County Trunked Systems (GE EDACS) - North

866.2125 866.2625 866.5000 866.7625 866.8250 868.1625 868.4125
868.5125 868.6875 868.7375

For some reason they have never done the "UBC" 230XLT package with
the extra battery pack etc. Just the UBC-220XLT with the single nicad pack.

All the best

Source record: 203663

The Freq X'fer of the BC3000XLT takes the Freq you have programed in one bank or channel and transfer it to another channel or bank. No big deal execpt you do not have to erase the channel to put in another just to keep all you channels in line. As far as fast scaning it does have to scan rates. It a good scanner and does cover the 800MHZ to 1.3 GigHZ. It does not do a good job of the 800MHZ trunk problem which is what I hoped it would. Uniden is coming out with a new model next month that will fix this. Look for the model BC235. They said that the BC3000XL will be replaced late this year or early next with the 3500

Jeff,

Well there was a program that was distributed here on usenet that reads MDT terminals. Actually it works only for the MDC-4800 transmission protocol. It does not decode the MDI MDT's, which is another popular system used by law enforcement.

I can verify that the MDTSTUFF program (an enhanced version of the original program) actually works quite well. I can receive the fire station printers, which use the MDC-4800 protocol for a large city near me. It's not perfect, but it was free. There is an FTP site to download MDTSTUFF (source and executable) and a few others including the Motorola Control Channel and Mobitex programs. Here it is:

ftp://ftp.netcom.com/pub/so/source/

I would also suggest using www.dejanews.com to find many discussions related to these MDT programs.

There are many requirements in order for the program to work correctly. You need a fast enough computer, access to COM-1 on the back of your PC, it must be run in DOS exclusively, the opamp interface must be correct, and a your scanner needs a discriminator modification. And a strong signal is preffered. The weaker the signal, the more noise introduced and the bit error rate increases.

Anyway, there is a solution for the Motorola MDC-4800 and Mobitex MDTs. I havn't found anything yet for the MDI MDT's (Are you listening Arron????)

>> AmSoft's new CD described...

>Thanks from me for posting your spam advertisement in
>rec.radio.scanner! It helps me to identify companies that I shouldn't
>do business with! In my opinion reputable companies do not engage in
>such tactics.

The problem is, though, that this particular company and CD-ROM is a valuable product - one that MANY different groups of us wish to hear about.

True - commercial posts do not belong in groups not designated as accepting blatant commercial posts...but AmSoft and Walnut Creek (the QRZ! CD-ROM people) have exciting, time-sensitive data products for us.

>>There has been long and continued discussion about
>>whether companies should post their crass commercial messages here and
>>the general consensus is that they should not.

Please try to re-think at least this one "commercial" post...or one possibly from QRZ! - simply because they are great values for the money and, in a way, they are providing a SERVICE to us who NEED that data and have CD-ROM readers. The "flying horseman" CD is relatively worthless, so you can trash any post from them....<g>

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital). |
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

>
>I find that silly. What are they going to hear the LO? I know thats
>there rules however it's just silly!

Geeze, It seems like every other month somebody asks this question.
Here goes:

FAR 91.21: PORTABLE ELECTRONIC DEVICES

(a) Except as provided in paragraph (b) of this section, no person may operate, nor may any operator or pilot in command of an aircraft allow the operation of, any portable electronic device on any of the following U.S.-registered civil aircraft:
(1) Aircraft operated by a holder of an air carrier operating certificate or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.

(b)Paragraph (a) of this section does not apply to--
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.

(c) In the case of an aircraft operator by a holder of an air carrier operating certificate or an operating certificate, the determination

required by paragraph (b) (5) of this section shall be made by that operator of the of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot-in-command or other operator of the aircraft.

Basically what all this says is that you will need permission from the airline authorities to use your scanner in flight on board a commercial airliner. In other words, if the airline conveys that authority to the captain, you may use the scanner at his/her discretion. On the other hand, some airlines leave this authority to some manager --not even the captain can allow you to turn on your scanner. In either case, however, airline captains are certainly within their rights to demand that you to turn off your scanner at any time while the aircraft is in motion.

On the other hand, if you're flying a small airplane like mine, you may use what ever you want at the discretion of the pilot in command.

FYI, aircraft navigation instrument technology mostly dates back to the 40's and 50's. It hasn't changed much since (they still use AM for VHF communications and LF beacons for instrument approaches!). Only last year or so did the FAA allow aviators to use GPS receivers for instrument approaches. What this means is that aircraft navigation is VERY sensitive to extraneous radiation from things like the microprocessor and the Local Oscillator of your radio. Just read the NASA Callback Spring 1996 issue if you don't think it can happen.

The FAA has taken a reasonable stance and said that unless you've asked the pilot and/or airline for permission, it's prohibited. Why risk lives while attempting to thread your way through a bunch of thunderstorms, just so that someone can have an amusing experience with a scanner?

5787. Frequencies for Port of Richmond (VA) and another question :)

Newsgroup: rec.radio.scanner
Date: 1997-03-19 00:00:00 UTC
From: hingram@amel.tds.net
Message-ID: <5gn5gs$2o8@news2.tds.net>
Source record: 203698

I live in Amelia County, Virginia and I am looking for frequencies used at the Port Of Richmond in Richmond,VA. Also, from my location in Amelia (VA) what VHF Maritime frequencies would I be able to hear on BC200XLT connected to external antenna? I did pick up VHF Channel 22A (157.100 MHz) one night and it was clear -nevertheless I could have heard it more better with an outside antenna.

In the Percon database how would I search for VHF Marine freqs in Virginia -namely Port of Richmond and the East Coast/ Chesapeake Bay Area.

Thank you :)

5799. My WS1000 Review

Newsgroup: rec.radio.scanner
Date: 1997-03-19 00:00:00 UTC
From: "Steven G. Evavold" <sEvavold@Interaccess.com>
Message-ID: <01bb1540$f7172500$c503d0cf@pantera>
Source record: 203710

I got my WS1000 today and for anyone who cares, here are my first impressions:

1. I had it sent from Javiation http://www.demon.co.uk/javiation/ and got it very quickly via regular mail (avoiding possible customs problems with overnight services). Cost was (will be) around 500.00 or so (they need to convert lbs to $)

2. VERY small and light. About the size of a cassette tape.

3. Many nice features, but you better have all your fingers because setting things requires the use of two or more digits at a time

4. Don't loose the manual, without it there is no way in hell you'll ever be able to program it.

5. It's not that powerful. My cheap ass SC150 (the best cheap ass scanner you can buy) pulls in tons more stuff that the WS1000 including some cell frequencies.....speaking of cell....

6. Cell coverage is full, in fact this thing can continuously scan from 500khz to 1300mhz.

7. I'm probably just stupid, but I can't seem to figure out how to get both sided of a cell conversation. I get one side on the WS1000 (and on my SC150) and the conversations get cut off when they change cells. Maybe that's how cell monitoring is, if so - it's a big big waste of time if you ask me

8. SUMMARY - I like the WS1000, but if you are buying your first scanner don't buy this one. If you only own one scanner, this is not the one to own. This is a great second (or third) scanner. It's a great scanner for walking around town or taking into places where a big scanner my not be welcome (Museums, stores, airplanes, church etc.). You'll want to preset as much as you can, set the key lock, and pocket it. It's very difficult to operate and takes a good amount of concentration. Is it worth the $500.00 ? It is to me for the following features (In order of importance): Size; Scanning Features; Band Coverage.

Looking to buy a new DAT deck, and my need for money is forcing me to sell my AR8000 :(. Here is the deal:

AR8000 Scanner,
4 NIKAD Batteries
Rubber Duckey Antenna that comes standard with the unit
Extended atenna that was purchased at Radio Shack
Power Adapter
Manual
Box it came in

(and has been modified for cellular by the fine folks at Grove Enterprises)

.....all for $425 or best offer.

* Also will throw in the book: "Scanners and Secret Frequencies"

*it is in very good condition, and is only missing the car adapter that was lost by the person I purchased it from.

Mail me if you are interested :)

If the web page you mentioned is from Ace Communications, the bc 230xlt
that they sale can only receive cellular via image frequencies. The normal
cell range has been deleted.

GRE manufactured boatloads of the 1986 vintage PRO-2021 for Radio Shack.
They were available in the USA for at least 4 years. Took Radio Shack
quite a while to sell off the overstock and Radio Shack dumped
the PRO-2021s cheaply near the end.

The PRO-2021 doesn't cover any of the 800 MHz band and people bought
the PRO-2022 replacement instead because the newer model included
800 MHz.

The squelch in the PRO-2021s I've used had too much hysteresis, a
condition easily fixed by changing one resistor (see the squelch
FAQ article).

Specifically, what part of your PRO-2021 is broken?

I was looking around at a bunch of mail order stores for scanners and was
wondering what were the "good" brands in the scanner market.
I previously owned a BC 230XLT and wasn't too impressed with its reception.
But, it didn't do too bad.

I'm looking for one around $200. If you could give me any suggestions
and/or www pages, I'd appreciate it.

Thanks.

Source record: 203724
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello, everyone!

In the near furture, I was considering purchasing one of the Beartracker units for my vehicle. I know there are two models out there, but I would like to know the major differences between them. Unfortunately, I have been unable to physically see the boxes/advertisements on these units, because most of the radio shops in my area do not carry them in stock, or sell out of them too quickly. I've noticed the BCT-7 (?) has an LED on it. I believe this is for signal strength? Again, I plead for any information.

Also, I did read a discussion about the cellular look-alike antennae out there, and was wondering if there are any nice low-profile units that receive well in the police bands. Currently, I am using my BC-200xlt in my car, and it doesn't quite cut it when it comes to the stock rubber-ducky antenna. If you know if any FAQ's or web pages that outline the different antennae, please forward the URL to me. Any info is greatly appreciated.

BTW: I'm not really a do-it-yourselfer. Unfortunately, me and the soldering iron do not get along well, so pre-made is really the only avenue I have to go with...

Thanks again!

I picked up one of the pro-62's on clearance - its a great little scanner for the price! You might also want to concider some uniden units. For around $250. you can get the uniden scanner (pretty much a pro-62), 2 battery packs, cig lighter adapter, AC/DC adapter. A pretty good deal, seeing how all of those extras you have to buy with the Pro-62.

From: Chris <chrismm@bga.com>
Message-ID: <3331EBA4.4AA1@bga.com>
Source record: 203436

Yes, there IS a way to get a US Pro 26 to receive cellular. Go here and look for the CPU chip for the Pro 26 model 20-506. This is the UK version of the Pro 26, and it gets full cellular.

http://www.demon.co.uk/javiation/home.html

Or, if your US '26 is still returnable, do so and order from this same URL the Pro 26 model 20-506 for about $400 US dollars. This may be the most economical way to go, as the US '26 costs about $350, and the UK CPU chip goes for I guess about $60-$80 US dollars.

Strong signals,

Chris in Austin TX

While reading article <33314150.50C6@bottom.com>, I noticed that
Len <email.address@bottom.com> said the following:
>Has anyone tried this phone? I'm wondering how bad the 'echo' is and if
>the range is any better than the 100 channel Escort Courier phones?

If you mean the 9510, it is the one and ONLY 900 MHz digital cordless that
gets the sidetone CORRECT. Yep, no echo.

Range is also as claimed, I maxed out just short of a mile. Note, however, that
you WILL suffer from occasional audio dropouts before that point.

There are a few engineering problems Lucent is working on and may have fixed in
the latest units; my advice if you are looking at one is to buy it from a store
that has a good return policy just in case you get one of the earlier units or
don't like the phone for another reason...

I have two Motorola Pageboy II pagers with desktop chargers that I recently purchased. I purchased these units & apparently didn't realize what I had bought. I have since found out that I have no use for pagers..... So if you are interested in them, please make me a reasonable offer. I would consider some sort of a trade for scanner equipment.

I have a 40 Channel handheld CB (Radio Shack model TRC-225) that i no longer use and would like to either sell or trade. The CB is in good condition although I no longer have the box or owners manual. Pretty simple to use, good unit to have for traveling. Asking $70.00 or trade for scanner equipment.

I just bought the 97 Edition today.. and I agree with the Radio Shack rep that sold it to me.. there's not much new in it.. At least for my area.. which is version 8 (Arizona, Utah, California, etc)

Any way.. it's only 12.95.. If its not worth it, you're not out too much money.

For Sale:

ICOM R-1 full coverage scanner (no breaks, including cellular, from 10kHz thru 1300 MHz). Radio is in very good condition except for paint flaking off the back panel. There are no scratches or blemishes on the face or display. Price also includes BP-90 six AA battery pack, AC adapter/charger, original antenna and instruction manual.

Features of the R-1 include:
> Uninterrupted coverage from 10KHz-1300 MHz, including military and cellular
> Automatic search-and-store capability
> Built in clock with power-on timer and sleep timer
> Signal strength indicator
> AM, FM and FM-wide modes
> Programmable search range
> Selectable steps of .5, 5, 8, 9, 10, 12.5, 15, 20, 30 and 50 kHz

Retail price of an R-1 is $529.95 and the BP-90 is $28, making the package, not including tax and shipping, worth $557.95 (Amateur Radio Catalog, Winter '96/97 edition, page 11). My asking price is $300.00 US.

Either radio will be shipped free anywhere in the Continental US via UPS. For questions or to arrange purchase, send e-mail to jdc@cci.com or call 716-654-2487 (work) or 716-381-3102 (home before 9 PM EST).

5847. 900 mhz video and audio transmitter

Newsgroup: rec.radio.scanner
Date: 1997-03-20 00:00:00 UTC
From: Chris Chapman <clchapman@kih.net>
Message-ID: <01bc34e0$6da3c7e0$627369ce@station.kih.net>
Source record: 203458

I recently purchased an 900 mhz video and audio transmitter and receiver for about $6 a piece at a "salvage" place. Just the simple kind of thing where you can transmit from your VCR to another TV. I was wondering if anyone had any idea what frequency I might find the audio on. I took the cover off but it doesn't have any kind of info inside, and it doesn't seem to have a name brand on it. All I can find is V-26305 on the front bottom right hand corner along with TNC 22852 and FCC ID:DT9TX-008AV on the bottom. It also has an AB switch on the back so I assume you can change the freqs it transmits on. Does anyone know what audio freqs it might use, or can anybody at least narrow the range down from somewhere in 900?

Thanks

PBSO souuth county units use Channel 4, 154.785. South county units are "Charlie" units and cover the area from Lake Worth Road south to the Palm Beach/Broward County border.

Also listen on Channel 5 (154.650) the countywide tactical. PBSO units throughout the county use this.

> At the same time that it happens the display show three dashes
>in the place of every digit....

Javier,

I do not know specifically about the Icom IC970.

However, many radios are designed to clear the display,
flash (blink on and off) the digits, or set them to "-"
to indicate that the phase locked loop synthesizer is unlocked.

This can be caused by a few different defects, including
power supply problems, component failure or component aging. Sometimes
a synthesizer realignment is all that is required.

By the way, I have repaired many high-end ICOM radios, including
one IC275H, several R7000s, and a few R7100s. In all three models,
the main reference crystal changed frequency as it aged,
requiring realignment after the radios were several months old.

In one case, the crystal was too far off frequency and had
to be replaced. In another radio, the crystal failed completely.
I don't know if your IC970 has a crystal aging problem.

Message-ID: <19970320052500.AAA14491@ladder01.news.aol.com>
Source record: 203525

During the recent cell phone privacy hearings in Washington D.C., reference was made to a fellow in Chicago who has developed a digital compatible receiver. Unfortunately, it costs $35,000. The point was made during the hearing that it will only be a matter of time before this technology is available at a more consumer-friendly price.
These comments were made as part of the cell industry's reasoning as to why implementing digital technology won't protect their customers from us "electronic stalkers" and our scanners. I'm not commenting only the validity of the claim, only passing along the information, and the context in which it was presented.

Richard LeBreton (lebreton@cyberbeach.net) wrote:
: I found that using the Industrial Alkalines from Energizer seem to make it
: last a little longer. These are not the usual alkalines you can get from
: you department store or Radio Shack for that matter.

: You guys are right. The Pro-60 seems to drain the batteries more that
: other scanners I've had.

2 suggestions:
1.rechargable cells will limit the expense.
2.if money is no object, you can buy lithum 1.5 volt AA cells which should work fine in a Pro-60, and will give extended life.

5871. Privacy technology in cell phones found flawed

Newsgroup: rec.radio.scanner
Date: 1997-03-20 00:00:00 UTC
From: fourphun@bellsouth.net
Message-ID: <MPG.d9afcc919512a669896c8@news.atl.bellsouth.net>
Source record: 203536
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Privacy technology in cell phones found flawed is a news item that I read this morning.

For details....
http://www.nando.net/newsroom/ntn/info/031997/info3_4608.html
In part that artiles says....
"WASHINGTON (Mar 19, 1997 10:31 p.m. EST) - A researcher said Wednesday that the newest breed of cellular telephones is less secure than previously thought.

Researchers have uncovered a flaw used in the technology designed to ensure a caller's privacy over advanced digital cellular phones. The results are expected to be announced Thursday.

The problem allows a sophisticated eavesdropper to figure out the number a caller dials on a cellular handset -- be it the phone number itself; a personal identification number, or PIN number, used to access a bank account or activate a calling card; or a credit card number."

also ...

"These are not the first problems uncovered with the new digital phones. Researchers already have uncovered flaws in the safeguards meant to ensure that what a caller says over the phone is not heard by others."

<G> Very interesting!

If you would have read the many posts related to MDT, EDACS, and MOBITEX, you would know that that day is already here.

But I doubt anyone will want to claim any money for it.

OTOH, a simple crystal radio, built for the areo band, can be very
useful, as it takes no power, does not radiate ANYTHING, and you
are sitting within feet of the transmitter. Aircraft comms in the
VHF band are AM.

5875. Re: bincancel:20 large binaries:AR986:@@NCM

Newsgroup: rec.radio.scanner
Date: 1997-03-20 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-986.a@redpoll.mrfs.oh.us>
Source record: 203540
Cross-posted to: alt.retromod,comp.sys.unisys,news.admin.net-abuse.misc,rec.autos.antique,rec.autos.marketplace,rec.radio.scanner,rec.sport.pro-wrestling

Large binary posts do not belong in unmoderated discussion groups.

Please read this entire message, the Bincancel FAQ, and the complete
report (see below) before following up to or responding to this article.

As a service to, and with the cooperation of, other news administrators,
I run a program that searches for, and issues advisory cancels for,
large binaries in the akr, biz, comp, humanities, misc, news, nz, rec,
sci, soc, and talk hierarchies.

I have issued 20 cancels for large binary files (average size 48710.5
characters - total size 974,210 characters) posted to 6 different
unmoderated discussion groups in the comp, news, and rec hierarchies
as follows:
7 rec.autos.antique
6 rec.autos.marketplace
4 rec.radio.scanner
1 rec.sport.pro-wrestling
1 news.admin.net-abuse.misc
1 comp.sys.unisys

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.usenet.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.bulletins. The
full report can also be found in news.lists.filters and alt.retromod.
Look for AR986 in the subject, or, if your reader supports it,
use <URL:news:ARMM-Report-986@redpoll.mrfs.oh.us>.

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated groups in the akr, biz, comp, humanities,
misc, news, rec, nz, sci, soc, and talk hierarchies
(except for comp.binaries.apple2, comp.bugs.2bsd, and
rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

For more information about binary cancels, see the bincancel FAQ,
<URL:http://www.southcom.com.au/~geniac/binfaq.txt>.

Please direct public feedback to news.admin.net-abuse.usenet and private
feedback to red@redpoll.mrfs.oh.us. In the interests of preventing
cross-posted flame wars, please honor the followup-to header and do
not cross-post your reply to multiple groups. Thank you for your

cooperation.

Best wishes,
Dick

>and modify them.

Don't clip it out unsolder it and save it It is actually a choke. I
taped to inside of case. While inside find c186 1000uf cap.
On a lot of units right out of the box this caps + side of circuit
board trace was never soldered thru.. Make this connection and you
will now have memory retention when pwr is lost.

Lessee.. Rat shack: $99. 0 memories. No hold button (i.e. if I key for 10 seconds, you see my freq. for 10 seconds.). No vibrate, few options.
Opto Cub: Hold option, will vibrate (I think) can change the gate, etc.
Opto Scout: $400. 400 memories, stores 225 hits per memory, etc.
If oyu can, hold out for the scout. I did. Now I'm getting the explorer!

Lorin,

My old monitor created a lot of interference (it was a Panasonic). When I replaced it with a Viewsonic in 1990, things improved.

Leroy has offered some good suggestions, but I'd like to add that your case should be tightly screwed together. When I operate my 486-33 with the cover off, which seems to be about half the time, my scanner is useless, but with the cover on, things are bearable.

There are several catalogs that sell sports equipment that have radar guns that cost $99-$199. I can't remember the names of the catalogs right now, but when I find them I'll get back to you. These radar guns clock speeds up to 99 mph. I'm sure that;s all uou will need, if you needed one that can clock faster speeds, sign that kid up for the majors now. If that price if out of your price range, maybe you could contact a major or minor league team near you that might be willing to donate an old one that they have left over from when they bought a new one or if they are really nice, maybe they will buy your team one of the less expensive models.

Absolutely it is better than nothing (although RCMA initially said
our subscriptions would probably be fulfilled by a different mag, & that
never happened), but I'm sure I'm not the only one who was a subscriber
(member) & reader of the RCMA journal, but deliberately NOT Monitoring
Times.

As of yesterday, I hadn't received such notice from the former RCMA.

Hi Alan,

Well that would be very impractical. Sounds like the unidentified PO did not know the consequences of MDT dispatching. How would the beat patrols, bike patrols, mounted patrols, and officers outside of their vehicles (using portables) hear the dispatches? Furthermore, for one man patrol vehicles, the officer would have to constantly glance down at the MDT's screen for a dispatch message. Sounds dangerous to me. The only vehicles I can see utilizing this method of dispatch is 2-man patrol units with one officer at the MDT keyboard.

It is more likely that the MDT displays will provide the patrol cars additional information about a dispatch and a method to perform MV and NCIC lookups. I seriously doubt that voice dispatching will be eliminated.

I also believe the trunk tracker will be alive and well in Miami, unless the system goes digital voice.

I've never had problems taking my ht HAM radios & scanners as carry-on
luggage. I carrying them inside a couple of camera bags with my
cameras and camcorder...and break-down and stuff in my mag-mount,
power supply cords and power-amp (for the HT) into the same bags.
It's all ready to go for the rental car at my destination. Never been
asked to open the bags by "security". (I bet I'm a site to see
walking thru the terminal, with a couple of antenna rods sticking up
thru my bag).

I don't think it's a good idea to send it thru with my luggage...I
don't want to risk them breaking with the baggage handlers tossing the
bags around.

The "flaw" being that a fixed encription method was used since using a rotating encription algorhythm is illegal. The amusuing reason for it being illegal is that no one - including the government - would be able to crack it, crimping their ability to listen in on "criminals and terrorists".

I recently had the great fortune of obtaining a Regency HX-650 6 channel handheld scanner. I am sure this little crystal controlled receiver must be at least 15 years old. I would like to get any information I can on this scanner, e.g., when it was manufactured/sold, and what the price was when it sold new. Was it popular? were there many made? How many are still around?

I would also like to obtain an owners manual for this scanner, even if only a photocopy.

Does anyone else own and use the HX-650?

Start of sentence should be capital letter. "maybe" in the context you used
it should be two words, as in "may be".

: but then i guess that's the wonder of you

Start of sentence should be capital letter. "i" should be "I" when reffering
to yourself. Should have full stop at end of sentence.

It's a wonder you are able to actually post.

Barry

Yes, I have a Regency HX-650 and it works well.

From the FAQ "BUYING A USED SCANNER RADIO:"

[...]

HX650/H604: 6 channel crystal portable. Likely made by
Sanyo. Same as Fannon and Bearcat Thin Scan units, (except
that Bearcat has 10.8 MHz IF frequency, and is harder to get
crystals for), but scans faster. Small size and common
crystals (available at Radio Shack), make this 1st choice
for bare bones portable scanner.

> Thanks,
> David.Try any of the following

Clean the elements with steel wool
Replace the matching transformer
try exposing a small section that is outside and check for moisture
Clip off the outside end only and check for moisture.
If you have any woodworking friends that may have a moisture meter, the
probes on those are sharp enough to poke small holes in the cable to
check for moisture.
Continunity test your cable both center and outside.

Anybody else have any ideas?

I beleive that the general coverage receiver is fairly self contained
and therefore should not share any common synthesizer components with
the 70CM or 2 meter receivers. All modules share a common reference
oscillator though and perhaps a weak oscillator could be to blame. The
coax leads for the ref oscillator all plug into a common assembly just
behind the front panel. I would check there first and then pay
attention to the logic board which selects the module and loads the
synthesizer.
I would also recommend checking other common circuitry such as the
power supplies. Does this occur only when the affected module is the
main receiver??

By the way does any one have schematics for any of the plug in modules
including the general coverage receiver??? I am trying to learn more
about the interfaces to those modules.

Yeppers. Your signal is dimisnishing... mostly in the low bands. You may want to purchase a Radio Shack 7db gain mobile mag-mount cell antenna (obo $30). This works REAL good in cell and 800 and works good in low band too.

It works ! :-)
I am now listening (it was yesterday afternoon) BBC on 6.193.
R-10 uses it's little antenna and, after going around this room
looking for the better place, i putted it here on my side,
near the computer printer and the TV antenna.
It likes very much the "ferrite effect" done by... myself, but I can't
keep it forever in my hands.
I have also a piece of wire on the balcony, but on this frequency
it seems to prefere to stay near the TV antenna cable.
You are true, it is not born for short waves. Surely a bigger radio
could give much more better performances, more stations, more little
signals, and a better sound quality. While a more little one could
offer better portability without compelling to wear...
too big pockets :-)
But I need a particular compromise between all this features,
with portability, radio performances and a little sound loudness.
I like to listen radioamatours on short waves, many years ago I
could learn a good telegraphy in this way, and now I like listening it
at times.
With this radio I can now listen also 144 and 432 radioamatour's
bands.
R-10 listens to some CW ham emissions on 7 Mhz, and yesterday evening
it was very amusing searching and founding some radioamatours in cw
and LSB transmitting on 3.5 radioamatour's band.
The resolution of 0,1 Khz permits sometimes to well center
(little?) emissions.
Now at 13.08 local time BBC is ok (S5 R5 !) on 12.905.
I am very glad of this little radio offering a bit of everything.
Between the faults of this few days of use I remark the short
appearance of channel name, the impossibility of mixing channel banks,
the exit from scanning anything else you do but regulating squelch,
volume and dial-direction changing (if I touch another button it exit
scanning), and "last but not least" it ignores scan delay time.
It starts again after 5 sec or 10 sec (depending on set regulation)
even if somebody is speaking,
and do a good job only when set on Pause.
Maybe I must learn a lot about it's use.
Thankyou very much for your answers, I am completely new to this kind
of radios. Thankyou, and happy listenings !

More on this in today's news...

SAN FRANCISCO (Mar 20, 1997 9:25 p.m. EST) -- A few minutes
work on a computer can break the codes that are supposed to
protect new digital cellular phone technology from
eavesdroppers, a team of researchers said Thursday.

The cellular phone industry claimed the impact on users
would be "virtually none," since engineers were working to
strengthen the encryption and since a separate code that
scrambles voices was not broken.

The Cellular Telecommunications Industry Association also
denied that its codes could be broken so easily.

"It involves very sophisticated knowledge," an association
statement said. "The announced attack requires multiple
minutes -- up to hours -- of high speed computer processing
to break the coded message."........

Of course there is more but you must go to this URL to read
it...

For those of you that want to know when your scanner or radio equipment got there or just want to know the status on it, check out this page;
http://www.geocities.com/RodeoDrive/4090/trackit.htm
Here you can find out the status and even see who signed for it, if the signature is required.
Bookmark it so the next time you need it.....you know where to find it.

When I'm out walking with my handheld and high gain low band antenna I
can pick up baby monitors and cordless phones for blocks. I guess I
could zoom in if I took the time, but I do believe their range is
often underestimated.

Source record: 203353

I have a Pro-2006 which I've had a couple of years now, and am looking into buying the OS 456. But, as usual, I have a couple of questions:

1) Info from Opto and Grove indicates software not included, should this be purchased with it, or is there shareware out there to do it, at least for a while.

2) I have a Scout - Model 4.0 - Version 3.0. Am I going to be able to reaction tune the 2006 with this, and if so, what about the cable. The scout didn't come with one.

Also, if the version of the Scout I have will tune it, will it only be able to do this when
connected to the computer.

Sorry for all the questions, and thanks ahead of time for any help.

Hello everyone,

I am writing to enquire about a modification for the PRO 26. I had read that it may be possible to increase the number of channels from 200 to something bizzare, like 56,400. This was to be accomplished through the modification of the radio's EPROM.
Is this mod possible? Let me know, here or direct.

So, how does one go about getting their Permanent File from the FBI?
Does one just email them with the request?

You could turn your browser to the following URL:

http://www.demon.co.uk/javiation/home.html

Contained within is information regarding two upgrades for the PRO 26.
One is a CPU upgrade costing about $65 US dollars. The other is a logic
board upgrade, including the CPU, costing how much I don't really know,
perhaps about $150 US dollars.
These upgrades effectively convert a US '26 into a UK '26. It may very
well prove more cost effective to import a UK '26 proper from the above
URL. I did so about 4 weeks ago with no problems nor regrets.

32.New York - For commercial vehicles over 18,000lbs RADAR-detectors are illegal. federal law.]
33.North Carolina - Not regulated.
34.North Dakota - Not regulated.
35.Ohio - Not regulated.
36.Oklahoma - RADAR *jamming* devices illegal; RADAR-Detectors okay.
37.Oregon - Not regulated.
38.Pennsylvania - Not regulated.
39.Rhode Island - Not regulated.
40.South Carolina - Not regulated.
41.South Dakota - Not regulated.
42.Tennessee - Not regulated.
43.Texas - Not regulated.
44.Utah - Not regulated.
45.Vermont - Not regulated.
46.Virginia - WARNING! - Get off at the border rest stops when travelling through Virginia and REMOVE your radar detector to the TRUNK...NOT to the glove compartment; and NOT under the seat. This means removing the RADAR-detector from the power supply, NOT simply turning it off. And yes, that *includes* licensed ham radio operators. You apparently get no special priviledges in this state for being a licensed ham. This is not an idle warning. I've had quite a number of users complain about their RADAR-detectors being confiscated by the state police EVEN *WITH* THEIR DETECTORS DISCONNECTED FROM THE POWER SUPPLY AND PLACED INTO THE GLOVE COMPARTMENT; EVEN WITH IT TURNED OFF; EVEN WITH IT UNDER THE SEAT, DISCONNECTED, AND TURNED OFF. Virginia is a VERY nasty (and if I might add my own personal opinion ... unconstitutional) place for unsuspecting motorists with RADAR-detectors. They use VG-2 and RADAR-Detector-Detectors (RDDs) at range, and what appears to be a closed-electronic-circuit-detecting wand within your vehicle after they stop you. If you are caught with a RADAR-detector, it/they will be confiscated for "proof of violation," and you will be issued a ticket and will have to pay a fine of $30.00. To get it back, it is up to you to make the arrangements after the court hearing and to pay the shipping and handling if you are from out of state. (No, they are not allowed to keep it after the court has it's say, and they must relinquish the device back to you upon demand after the court decision on your case, regardless.) If you do not reclaim the device, it will be eventually destroyed. You have been forewarned. For more information about your rights, see The R.A.D.A.R. Home Page - Legal Section.
47.Washington - Not regulated.
48.West Virginia - Not regulated.
49.Wisconsin - Not regulated.

50.Wyoming - Not regulated.

NOTE: RADAR Detectors are illegal period in ALL states for all "commercial" vehicles! Here is the Federal Law.

The Grove antenna is a great antenna, but guess what? It's nothing more than a TV antenna turned vertical! YES! Go to Radio Shack and buy one of their TV antenna, turn it vertical, and presto... a quality, high gain (9.5dB) directional antenna. I use one myself. Feed your scanner with RG/6 cable and you'll be just fine. You can also buy the appropriate adapter while at Radio Shack. As for me, I mounted an F connector jack directly to my main scanner because adapters always induce loss.

A TV antenna is nothing more than a Log Periodic antenna, which by design, is broadband, but directional.

I like Grove, but hate to waste money on needless gadgets.

5950. Re: Huge shootout in Los Angeles

Newsgroup: rec.radio.scanner

Glad you enjoyed your visit to beautiful downtown Los Angeles. And just think, those of us that listen daily get to hear this stuff all the time. My personal favorite is to listen to the news while something is going on and laugh at the news media and their lack of information and speculation. The shootout as an example, when the mayor showed up the media all exclaimed that "... the mayor has just arrived..." Funny, he and the chief of police had been their for nearly an hour! Callsign Executive-1.

Welcome to L.A.!!!

5951. Realistic PRO-2036 Scanning radio reciver for sale (UK)

Newsgroup: rec.radio.scanner
Date: 1997-03-21 00:00:00 UTC
From: Frank Charlton <frank@tachyon.demon.co.uk>
Message-ID: <01bc35fa$b57a0460$a258989e@tachyon.demon.co.uk>
Source record: 203383
Cross-posted to: alt.forsale,alt.radio.scanner,alt.radio.scanner.uk,misc.forsale.non-computer,netcom.uk.forsale,rec.radio.scanner

For Sale in the UK:

Realistic PRO-2036 home base scanning radio receiver, in excellent condition, boxed with all manuals, power supply and external telescopic antenna. Coverage as follows:

29 - 54 MHz FM
108 - 136.995 MHz AM Airband
137 - 174 MHz FM
216 - 512 MHz FM
806 - 823.9875 FM
849.0125 - 868.9875 MHz FM
894.0125 - 956 MHz FM

Features as follows:

Channels : 200 (20 each in 10 fully programmable banks)
Auto Store - finds and automatically stores frequencies.
Auto Sort - sorts programmed frequencies in channels within a bank for maximum scan speed.
CTCSS - uses Continous Tone Coded Squelch System (CTCSS) where supported.
2-second channel scan delay, can be disabled.
Memory Backup - keeps channel frequencies stored in memory for up to 5 years during power loss.
Channel Lock-Out.
10 Priority Channels - You can set the scanner to check one channel in each bank every 2 seconds regardless of what else is being scanned.
Limit Search - Lets you search for new frequencies between your pre-defined limits.
Large Backlit LCD Display with adjustable lighting level.

External Connections : Standard BNC antenna connector on rear, headphone and line-level output on front for connection to tapedeck, etc.

This is a nice homebase receiver, and has given me a lot of pleasure. The unit is fully working, has never been opened, repaired or modified in any way whatsoever, and is in pristine condition with manuals, box, PSU, antenna and a couple of paperback scanning books.

Original cost £230 - offers please to de18@dial.pipex.com and NOT the email address at the head of this posting, as this account won't be active for much longer. No sensible offer refused and may consider direct swap for PC bits (decent IDE HD is one thing I'm after).

Regards,
Frank.

Dmk (aries@ix.netcom.com) wrote:
: I just read Grove's catalog and was wondering if anyone has tried it
: and how it performed.Thanks.

I have a WinRadio and love it. It's very easy to set up and has performance similar to the AOR AR3000A. It scans at up to 50 channels per second, covers 500kHz to 1300Mhz in all modes (AM, WFM, NFM, SSB/CW) and receives the FM broadcast band in stereo.

I use the radio mainly for VHF/UHF and find it simple to operate and it can be used both in Windows or Dos. It even comes with information to write your own software if you chose to do so but the original software is well written. The radio is 100% controlled by the computer including volume level and squelch. The squelch is a signal level type like ICOM uses (nice feature).

>here.

I would also be interested in getting more than the sound bite that CBS threw out in their news broadcast. It's as if they are targeting the technically stupid audience. Whoops! What am I thinking??? Most people can't successfully change the batteries in a flashlight. Sorry to go pessimistic, but it's the truth. However, I'd be really interested in the technical ins and outs of how the code was broken.

HIHI,

Writing from NYC, I'm looking to get some feedback on a few 900MHz I'm considering:

--Uniden EX945 (digital)
--Escort 9600 (w/ spread spectrum)
--AT&T 9120 (digital)

I'm prety indifferent as to price between the three (i'm seeing them all at ~$150). My main concern is clarity of sound (esp. here in Manhattan) and general "usability". If you have any relevant experience, good or bad, with any of the brands or models mentioned, I'd love to hear about it. . . Also, if you know of a competitively priced model (and where to get it) of equal or better quality, that would be useful as well.

** REDUCED ** $795 your choice......

I have 2 Icom R7000 receivers for sale. They cover 25-1000 and 1025-2000 MHz, including FULL 800 Mhz. Both are in excellent condition, and include the original boxes and manual. The first unit I bought new, and it also has the optional 12 VDC kit and the optional speech board, and the discriminator output has been added. The second one does not have those options. I've been asking $875 and $825 for them plus shipping.
Thanks.

5963. New Aircraft Tracking Software for Windows

Newsgroup: rec.radio.scanner
Date: 1997-03-21 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.91.970321172847.15333D-100000@alfa.ist.utl.pt>
Source record: 203395

That's it!

The new aircraft tracking Software for Windows has arrived.

After read this presentation message please don't forget to visit AirNav URL
where you have more detailed information of the program and some
Screen-Shots.
You can also download a DEMO version of AirNav with two tracking samples.

AirNav URL
http://www.geocities.com/SiliconValley/Lakes/9420

AirNav E-mail
airnav@geocities.com

With AirNav you can understand all the flight control organization under
world air traffic
control centers: just enter flight data to the program via MANUAL MODE
(in a understandable
table representing flight waypoints and times) or TERMINAL MODE (where a
command
interpreter will decode all information given and store it into memory)
and the program will track the
flight on a map that can be done by you using one of the three map
generation commands provided.

Tracks up to 50 aircraft at the same time
160 000 position digitalized world map
Possibility of draw your own area map
Includes an editable and searchable database with over 8500 VOR/NDB
16000 aircraft editable database with selcal, registration, company and
aircraft type info
Easy-to-understand communication command interpreter
Manual and terminal data insertion modes
Estimates next enroute waypoints ETA's

More than 50 error messages make the program easy-to-use but
don't forget that for any possible
question you only have to E-mail me to airnav@geocities.com.
It's also provided a help file with over 60 topics where you can
learn and understand the usage of the program.

For more information visit AirNav URL at
http://www.geocities.com/SiliconValley/Lakes/9420

Actually, they only found a flaw in the encoding, and are able to
decode the dtmf digits dialed, NOT the voice. Even this requires
several minutes of calculations with complex computers and equipment.

The story is also on the web somewhere, I saw it on t.v. and on the
web.

Excuse me Mr CrAcKeD, (or is it mR cRaCkEd, I forget.)

Ponder these please:

#1 This is absolutely the wrong group for this disagreement.

#2 I know several people who've turned thier brains into tapioca by
doing too much pot. "Burnouts" you call them. And that's just pot.

#3 Name calling is dumb.

#4 I live in Los Angeles. The War on Drugs is a pointless losing battle
and dangerous as hell, sure. But it's better than 20% of our city stoned
all day, every day. Trust me LA's weird enough as it is.

#5 DARE may not work well but it's a good try.

MattD.

Here are two ways to remedy that problem. First off you could go to the support.tandy.com and get to the scanner section. The keypad RSU part # is 10789808, the operator will call it a keytop. Call 1-800-THE SHACK and order it with a credit card. It will cost $5.91 plus S/H. The other way is to go to your discount automotive parts store and get a bottle of "Loc-tite Rear Window Defogger Repair Kit". This is a very small bottle of a conductive resin that you can paint the rubber pads of the keytop. This bottle will cost you about $9. DO NOT clean the black conductive material over the copper keypad traces with rubbing alcohol or finger-nail polish remover. You might just wipe the keypad clean with a soft paper towel. It is easier/cheaper to go with the replacement part from RS unless you think that you want the Loc-tite on hand for work on remote controls, etc.

Note: I do not work for or receive reimbursement from Radio Shack or any discount auto parts stores.

What types of mods? There are several mods available for the Pro-2042. There is a memory mod (16,000 channels), center-tuning mod, Data squelch mod, SCA mod, S-meter mod, LED mods, digital s-meter mod, and a few others. You can get a few computer interfaces to auto-program those channels or beef up your scanning ability and scan rates. Oh, you might have meant ways to get cellular frequencies!!! There are about 4-5 ways to go about doing that.

The 'Dreaded Mod Sheet' tells me that cutting the trace between pin 80
on IC1849 and L201 kills the beep.

Pin 80 is the first pin on the left side of the chip, counting up from
the diagonal notch in the lower left corner.

Fire Rescue Offers Citizen&#65533;s Fire Academy
Palm Beach County Fire-Rescue will be commencing its first Citizen&#65533;s Fire Academy in March/April 1997.
The Citizen&#65533;s Fire Academy provides County residents with the opportunity to accompany rescue workers as an observer after first learning what the job of a firefighter/paramedic is all about. Additionally, participants are given the opportunity to take part in home safety surveys, fire extinguisher training, Cardio-Pulmonary Resuscitation, first aid instruction, and ultimately feel the experience and the heat of a controlled live structure fire demonstration.
The Academy is open to residents 18 and over. The class is tentatively scheduled to meet one evening per week for 9 weeks.
For applications or for further information, please contact Battalion Chief Steve Jerauld at the Palm Beach County Fire-Rescue Training and Safety Division located at 50 South Military Trail, Suite 200A, West Palm Beach, FL 33415 or call (561) 233-0010.

I have one and I like it. I think it gets bashed by people who spend
bunches of cash, but I think It works fine. I especially like the ability
to organize freqs into banks of ten. Compared to my WS1000 It's very easy
to operate.

Forget about cell mods, it just aint going to happen. But funny enough, I
pick up cell conversations all the time via imaging.

BTW - get the black one, I have the yellow one and frankly I feel a little
foolish taking out in public ;~)

Universal Radio sell a decoder for around $300, and Opto sell one for
about $200 (I don't think you can scan and decode at the same time though)
but the cheapest way is to buy a book for around $20 (depending on where
you live).
Good luck
Jo

I love the way some people make demands. They can't take the time to politely ask for something (much less in a complete sentence) then expect someone else to take their time and meet their demands. And what is worse is that they expect you to E-Mail them directly because they can't bother to check the news groups for responses.

Sorry, but this message just hit the wrong nerve.

Its usually a bunch of bull with the newer scanners...they dont generate enough RF to cause a problem. Just keep the thing hidden from the flight crew's view (use earpeice) and if any signal can actually penetrate the plane you'll hear it.

Abstract: Try an extension speaker. If that doesn't work, expect to
spend extra for a "good" amplified speaker.

Long ramble follows. ;-)

You may want a simple extension speaker instead. I've used Radio Shack's
cheap extension speaker on mobile and hand held ham equipment. They all
sound nice and clear with plenty of volume. Of course the speaker's in a
box three times the volume of my HT so that helps.

The only problem I've run across is the ingenuity of radio manufacturers.
The mobiles are easy, one 3.5 mm mono speaker jack for my single band radio
and 2 for my dual bander. HT's are where they get creative. A Kenwood I
borrowed used a 2.5 mm plug, my Icom IC-2SRA combines the speaker and
mike in the same plug but behaves OK with a mono speaker pluged in, the
Yeasu FT-50R has a FOUR conductor 3.5 mm plug for speaker, mike, and clone.
Check the instructions for your scanner.

My only experience with amplified speakers was bad. I tried using cheap
amplified speakers on a walkman. They buzzed so bad I exchanged them
(with money back!) for some cheap extension speakers, much better.

Your mileage will vary.

Hi Dave,

Yes you can replace the 3/32" jack but it will require a bit of work on
your part.
I ordered several of the 1/8" jacks used on RadioShack's PRO-43. They
come in handy for a variety of projects and are worth having around. The
item number according to the service manual is: J301, Jack, earphone.

The invoice from RS calls it a J-1304, Jack, 3.5MM phone. The cost in
'94 was $1.78 each, most likely a bit higher now. Call the Shack at
1-800-442-2425,
8-5PM, M-F

You'll have to remove the entire plastic top off the 200XLT and enlarge
the hole for the jack with a small file. Then you must unsolder the
3/32" jack from the board, not easy to do. Then you have to redrill the
existing 1/8 jack mounting hole in the metal plate (chassis) of the
scanner. The new jack pins will not fit properly, as I recall, into the
circuit board so you will have to enlarge holes to reposition the new
jack, then rewire things.

As long as you know what you're doing it's worth all the effort and it
will require "EFFORT". I sealed everything in place with hot-melt glue
to prevent the jack from moving at all (don't use epoxy or super glue,
in case you need to remove it). Lot's of luck, you're going to need it.

As for the 200's audio, it's great as is. The RadioShack lapel speaker I
use is quite good. I use it on both the PRO-43 which needs an external
speaker or headphones in a noisy environment, and my 200XLT. Never had
any problems with it.

Did you choose the correct 3/32 to 1/8 adapter? Using one meant for
stereo may not work or could cause a lose of volume.

Regards,
LGS

Hi, a fairly simple technique that we first developed a couple of years ago that has become known as the "Virtual Downconverter" can be applied to a number of scanners as a way of eliminating the programming blockage in part of the 800 MHz band. In simple terms, this procedure merely "hotwires" ON the 800 MHz band within a scanner when it's receiver is tuned to an enirely different band. This enables reception on the blocked 800 Mhz freqs at normal sensitivity. Although the exact hardware changes and the programming varies between different scanners, this technique can be applied to a number of scanner models, those of both dual and triple conversion designs. A crude version of this mod was recently demonstrated before a Congressional subcommittie using a PRO26.
Have fun

6005. BC200xlt lapel spkr volume

Newsgroup: rec.radio.scanner
Date: 1997-03-21 00:00:00 UTC
From: Dave Bryndal <dbryndal@ashland.edu>
Message-ID: <858925931.15290@dejanews.com>
Source record: 203472

I have a BC200xlt scanner. I got it new (but dusty) from a local Wal-Mart about 3 weeks ago. So far it has been the answer of all my questions. Rugged, large channel capacity, modifiable, & big. However I have noticed two things that really annoy me and ask for help.
First, why did they put a 3/32 jack for external audio?!? Having an adapter is like having a "break me here" lever on the scanner.
Second the audio is incredibly weak as comapared to the internel speaker. To test this I used a Motorola speaker mic, and a radio shack lapel speaker. Both returned unreasonable results compared to the 200xlt's internal speaker and other various HT's and Uniden scanners that I own.

My question is, has anyone else had this problem? Is there a way around it? A modification perhaps? I suppose I could add/remove the 3/32 switched jack and install a 1/8 one and run it in line with the speaker audio but I am wary of poking around that much as it is NEW toy.
Anyone on the same train as I? Your comments please.

I am looking for some technical information about the Pro-60 and its CPU. Especially how it differs from the European model. If there is a trick like shoring out a pin or two on the CPU to get cellular coverage I would like to find that out.

If the above is not possible I would like to know more about these GRE converters and if there are any available. Is there a company in Canada that might be making such converters still?

I am looking for ANY kind of information like this!!

6008. Digital Cellular Code Cracked Says CBS

Newsgroup: rec.radio.scanner
Date: 1997-03-21 00:00:00 UTC
From: m26@juno.com
Message-ID: <333249c9.1160235@news.ld.centuryinter.net>
Source record: 203475

It was on the Thursday CBS news with Dan Rather. Someone has cracked an all-digital cellular phone network that was supposed to be totally secure. The story was short on detail, expecially technical detail. Some guy standing next to a computer told the CBS reporter that it takes him only a few minutes to break the code now. The answer was not the one asked for by the Reporter. He wanted to know how long it took to break the code in the first place. The story is a little suspicious. It provides almost no evidence to show the code has actually been cracked and the single guy interviewed about cracking the code evaded the stupid question he was asked. Does anyone know what has really happened here. I suspect CBS lifted the story out of a newspaper as they often do. The CBS story suggested you could both get the phone's identity in order to clone a chip, and listen to the digitally processed phone conversation as well.

Nice to know you feel that way. It would a nice gesture to post
a
"Warning, your life may be in danger if you fly with me"

sign on your back so that your fellow passengers have an
option. I like to know when I'm flying with an idiot.

IMNSHO, you ***might*** be right about your own scanner. You haven't
told us what measurements you've made or given us any indication that
you even know emissions on what frequencies could cause interference,
or that you have the credentials and testing equipment fo make such an
all encompassing statement.

But how do you know whether somebody else's scanner won't cause
problems? Where do you think "birdies" come from? If your
own radio generates signals that interfere with it's operation, how
do you know how sensitive airline navigation equipment is to outside
interference?

And I fail to understand what kind of transmissions can be heard
while landing or taking off that can't be heard from 10,000 feet or 0
feet without simultaneously jeapardizing the lives of a hundred
people?

I fully recognize and salute your right to listen to whatever you
want. I even recognize your right to terminate your own life; but I
deplore your callous disregard for the safety of others

Ah.... the "Police Call" Radio Shack sells *is* the one published by Gene
Hughes. Unless of course his commentaries, and the fact his name is
mentioned as the publisher is some sort of trick.

You sure it wasn't an analog 900MHz phone? You shouldn't be able to
"clearly" hear a digital phone on your scanner, unless you have a
decoder on the scanner. Some of the "digital" phones I have been
seeing lately are analog phones with a digital answering machine built
in!

Hi, i used to be able to get into the undernet by simply typing /serverus.undernet.org now I cannot get that to work. Can you post a list ofundernet servers? Would be appreciated. Also, what about the other nets?I primarily use the dalnet, but there is the EFnet as well. Maybe do thesame in all three? I would be willing to collaborate on a #scannerschannel on the dalnet. Maybe even do one that encompasses radios andmonitoring in general. What do you think?? Of course I would help where I can.

Jack,
The Sportcat is a nice radio. But unless you live in the
"sticks", I would get something with a few more channels. No
need to limit yourself if you don't have to.
Save/spend a little more and buy at least a BC220XLT or
BC230XLT. Last I saw you could get these for $200 - $215.
And there are no "mods" to add cellular on any modern
radio. If this is what you want then you should buy an older
used model or import from abroad.
Good luck!

Superb. A systematic evaluation of this kind has been long overdue.

Sent it to MT and Pop Comm ... then again, they might lose some
advertisers. :-)

I'm disappointed you didn't include the GRE All-Band (Radio Shack PRO-34)
which is my standard reference "dual-band design" duckie. I suspect,
though, that it would perform (as per Jeff Goldman's account to me of his
unofficial "duckie shoot-out" at Lentini Communications a while back) that
it would perform like most of the dual-banders.

Also, the ICOM FA-B01RE (std equipment for the R-10) while small, does
better on VHF-Hi than other micro-sized antennas like the R-1's stock
duckie, the DB32 "Miracle Baby", and the stock duckie for the Standard
AX-400 ("Welz" WS-1000). In fact, as soon as replacement parts for the
R-10 become available I'm thinking of ordering one to keep on the AX-400.

The CPU's (there are two types) are made by GRE, the same company that
makes the converters. I have asked Bill Cheek if it is possible to
switch the CPU's but he has not gotten back to me yet. I bought a GRE
SuperConverter II over the summer and it has worked great so far. These
converters were last made in 1994 but you may still be able to get one.
I bought mine from Scanner World USA....stop at their web page to see if
they have any left, if so it will be around $84. Hope this helps!

>system)

You didn't unhook ALL of the antennas... in some situations, the speaker
cable may act as an antenna too, and it sounds like that is the culprit
in your situation (IE: even when the volume is turned down.)

>does anyone have any suggestions on something to try. other than moving!
>please no smart answers this is a seriuos question.

In most cases, the <super speaker wire> is bullshit... but in your situation,
it might be appropriate... NOT that "monster cable" or the like, but rather,
a cable pair with shield SEPARATE from the two center conductors.

Before wasting your money on the cable, only to find out that the speaker
wires are not the point of intrusion, first run a test for a few days, or
however long it may take to be sure that during the test, you have been
bombarded by the same signals which have interfered previously... but during
the test, you must have all your speakers near the amplifier, and connected
with SHORT lengths of wire (somewhere in the range of 3 foot lengths).

It's not conducive to sensuround during the days you conduct the experiment,
but if you still get the interference with those short lengths, then you
have probably saved yourself a good deal of money by ruling out the new
cable solution.

IF you suffer no more interference (or a major lessening in interference)
during the test, then you might want to replace your long speaker cables
with shielded wire. Use the two center conductors as you would the
regular speaker wire... and then connect the shields to a chasis ground
point on your amplifier. DO NOT CONNECT the shield at the speaker ends.

The Wal -Mart type stores sell this 20 dollar gizmo that is made for
portable CD players, but it works great for scanners. You plug the gizmo
onto the lighter for power, and plug the headphone output into the gizmo.
It then broadcasts on FM radio at a certain feq you pick. Then you tune it
in with your car radio.
Since traffic is moving, and since it doesn't broadcast very far, it
doesn't interfere with cars around you.

Hi All:

I am looking to purchase a new scanner. I do not want to spend a fortune, but money is not a major issue. I have a Radio Shack PRO-51 hand held, and I mostly listen to NYC Air Traffic Control.

My question is: I'd like to purchase a scanner that has more power and can pick up ATC better than what im getting. Im in the NYC area and I can pick up ATC but not so great. What scanner will give me better performance?

THanks in advance,

No problem!

If you are using a power supply for your Scanner and intend to use it
to supply your Power Speaker too, make sure it's rated for at least
two amps or so. At two amps the supply should be as happy as pie.

There is also a amplifier called "The Blaster" used in/for many hand
held Ham radios that my be helpfull IF you have the space... you
could velcro a small box to enclose your Blaster.

I don't see why ther should be a problem. A handheld scanner's audio would sound alot better amplified and played through a larger quality speaker.

I bought a pair of amplified speakers, and they sounded great, but they automatically went into a stand-by mode when no signal was being received. When a signal did come across it took a split second for them to power up again so I often missed the first word.

I returned those for a little Optimus unpowered speaker and I use it with my 3000XLT and it works just fine - plenty of audio output.

> Who the hell do they think they are?!!

Actually I'm afraid it isn't about entertainment. Open broadcasting should not be maintained simply because it excites the lives of homebodies. There are many reasons involving public benefit, awareness and scrutiny. All of these are outlined at my website if one clicks on "trunking issue".

As for who the hell the Hillsborough County Sheriff's Office "think they are", they are rightfully the head law enforcement agency, and the only office capable of making the actual decision to support or reject open broadcasting in our region. I am happy to say that they have compromised on the issue. It may still be difficult for for average people with the average level of interest in listening into to police as they work, to buy a police radio. But if they want to, they can. And it is the HCSO that is to be credited with making this decision when many other counties in Florida strictly forbid purchase of these units by members of the public other than select media or crimewatch groups.

Dave

Hi,

Thank's for responding to my posting.

>The ARRL antenna manual has a bit on corner reflectors. Be sure
>to check out the "trough" style of corner reflector. Your basic
>corner relector has about 10dBi gain with zero lobes to the rear.
>However, the forward pattern is not a single large lobe due to the
>non parabolic reflection characteristics. This is for a reflector
>that is a full wavelength high.

Yes, it makes sense. Maybe I should design a parabolic reflector, not
a corner one (but of course it's more difficult).

>
>You can build a "ground plane" style corner reflector by cutting
>the reflector in half (to 1/2 wave high), using a 1/4 wave driven
>element sitting on a sheet metal ground plane. There are references
>to this style in McGraw Hill "Antenna Engineering" by Jasik 1961.

I'll try too locate the book. Is it possible for you (if not too
difficult) to scan the relevant page/diagrams and email it (I normally
use a fax machine as a scanner into my PC, then email the image). If
that's too difficult, maybe citing the equations could help.

>(This is the ultimate antenna reference manual). The problem here
>is that a large part of the signal appears as side lobes in the
>*VERTICAL* plane (toward the sky and above the horizon). I would
>not recommend this arrangement unless space is a problem.

Well, I need it for reception ONLY, so I might not care (I'm not
wasting transmit energy into the sky if that is what you were
concerned about). I just need to reject interference from the back
(easy with any yagi) and sides (more difficult).

>You can model corner reflectors with ELNEC, EZNEC or WINNEC antenna
>design programs. You will find that simultaneously getting a 50ohm
>match and a good pattern is a exercise in compromise. When in
>doubt, tolerate the vswr and design for best pattern.

Again, this is for receiving only. Does it matter then?
Where can I get those simulation programs?

>Also, be advised that you can get an exellent cartoid pattern with
>a verrrrry deep reverse notch using two identical quarter wave antennas
>seperated by 1/4 wave spacing. A 1/4wave electrical 75ohm matching

If it occurs in all recieve modes, it sounds like your receiver is not
properly aligned.

If it only occurs in FM-wide mode, it sounds like that bandpass filter is
far too assymetric and should be replaced as defective.

Either way - send it back.

Nice idea, but doesn't it affect the range that the 800MHz band is
down converted to (i.e don't you have to give up that range, or at
least is a switch provided to defeat it when necessary)?

>A crude version of this mod was
>recently demonstrated before a Congressional subcommittie using a PRO26.

Unlucky for the scannerists...

> Have fun

I have both of them,the 2004 is better in some areas.The 9000 has a problem of "capture effect",more exactly,a lack of it.When the bands are open,and there are 2 transmitters keyed up the 9000 loses it and makes a terrible noise,almost like a severly distorted AM hetrodyne.It's very annoying.The 9000 is slightly more immune to intermod,but not by much.The 9000 also has an annoying weak signal hiss that grates on nerves if you keep the squelch really low. If I had to choose between them,I'd have to say I'd take the 9000,more for the features and speed,not for performance.If your 2004 is getting deaf,you might want to peak it up according to the procedure in Cheek's book.It made a huge difference in mine,one of the adjustments was off about an eighth of a turn,and it really woke up!

As a note in passing...I saw a brief article on some testing
that Bob Grove did in a back issue of Monitoring Times. They
measured connector losses and found them to range from 0dB
to 0.3db for even an "average connector. Those of the gold-
plated type had almost no loss on the whole if I remember
correctly. It is more likely that there is a bigger
attenuation issue in the co-ax cable than in connectors.

Fcc database search results for Ram Mobil Data USA

938.325, .3375, .35, .3625, .375, .5125, .5250, .5375, .55, .5625, .575,
.5875, .6, .625

939.2625, .275, .2875, .3, .3125, .325, .3375, .35, .3625, .375, .3875, .7625,
.775, .7875, .800, .8125, .8250, .8375, .85, .8625, .875, .8875

I did a manual search of the database so I may have missed some.

These are for all aeas of the U.S.. You may/will hear other services,
voice/data on some of these freqs.

When you hear RAM it will sound like chuff,chuff, chuff,.............., then a
data burst.
I use a .bat with the following switches.

mobitex /v:0 /cfs:1 /rn:1 /bs:1 /bi:1 /com:1 /ca:1

Not much data comes across but the program does work.

I've been playing around with the new version of Probe 3.0. There are several improvements.

One that I like in particular is "hyperbanks." You can assign a bank or banks to any of the function keys, along with a 40-character description. Hit the appropriate function key, and you automatically start monitoring the bank or banks that you defined. It's like having 10 scanners available with a single keystroke.

Some of the other new features include visual alarms to spotlight active frequencies (you have both visual and audible alarms when certain frequencies become active); priority and smart scanning can be used simultaneously; and the automatic frequency marking that notes when a frequency goes active and then allows you to move the frequency from one bank to another or to delete it.

There are several other new features, but these probably are the most significant. I'll report back when I'm done playing around.

Still a DOS-based program, however.

I'm sorry, but I don't know the specifics on pricing for upgrades, availability and such. You'll have to contact datafiles@aol.com for that stuff.

I'm not so sure about that. I got a digital 900 mhz phone at a hamfest
recently and can hear it very clearly with my scanner. It's not spread
spectrum. I think the "digital" label on the phones is just a buzzword. If
you really want privacy, make sure it is spread spectrum.

any info and help appreciated!

i have an rca dolby pro logic surround sound home theatre system, it not even a year old. my problem is as follows:

i live about 25 yards from a very busy raod, with quit a bit of truck traffic. when trucks and cars drive buy and they are speaking on their CB's it bleads across my home theatre reciver. it is so loud it seems like the speakers are going to blow. no matter what the volume is on the reciever, even with the volume off the cb still comes over the speakers.

i unhooked the reciever's am fm antenna, and it is not hooked up to the cable either. (i know in some areas am-fm is part of the local cable system)

does anyone have any suggestions on something to try. other than moving! please no smart answers this is a seriuos question.

please email me at msimm@sunlink.net with any info.

thank you in advance,
mark

Sorry Jason!

WRONG Police Call! Get the one (by the same name) published by GENE HUGHES!

MANY times better than the R.S. book... get it at Henry Radio, Juns' Electronics, TomTronics (Harbor City, CA) and many other locations.

Thumb thru it and you will see a much better approach to indexing and order. Outstanding refrence for Southern California living! It's just a few dollars more but WELL worth it.

>>
>>So, what's the best way to find the tones used on your local PD/FD/
>>Hiway Patrol frequencies? Buy another $300 gadget, I guess?

Here is what I did to find what tone is used on a particular freq. First of all the tones (38 of them) should be listed in your scanner manual. Follow the instructions to input the tone on the freq. and put the same freq. in 38 channels on your scanner with the 38 different tones. Scan and when it stops,you have found the tone. Delete the other 37 channels and you have it. Takes a little work, but dosen't cost anything.
If you do not have the tones to use, e-mail me and I will give them to you.

Do you have a preamp or mixer that goes to your audio amp? if so, it
sounds to me as though its getting in through there. you could try some
bypass caps to ground. .01 and .1 Mfd between the ground and shield on
the cables that feed your amp. NOT ON the speaker outputs.

MIXER/PREAMP

OK, I'm back.
Come to my RadioShack and you'll not deal with unintelligent people. The DX-390 is your best choice without a doubt. It happens to be manufactured by Sangean and is a superb SW/MW/LW receiver although I would like to have more presets. The DX-392 is an option, but the built-in cassette takes up space on the front that the DX-390 uses for it's much larger speaker.
BTW, I must apologize for my intelligible prose; I know it is inappropriate for this newsgroup. P.S. I've said it before, and I'll say it again, "You've got questions. We've got answers."

playhaus@news.gate.net (Lorin Winchester) wrote:
[snip]
>Is there anything I can do about this interference from my computer,
>short of doing my scanning in another room?

Yes - although I do not have time to go through all sapects of nois reduction techniques, one that is oft overlooked, and is most probably the point of where MOST of the interference gets out from the computer.

A majority of computer hash escapes out from the AC INLET cable! It acts as an antenna, radiating the crud.

I put a filtered AC input socket on the computer and this reduced the crud by over 75% percieved reduction. (not measured with any scientific instrument other than my ears!)

The filtered socket is made in Switzerland by SCHAFFNER pt number FN321-3/05. In the United Kingdom, it can be obtained from Radio Spares, p/n 238-817

Further reductions were made by fitting Ferrite rings/tubes on every cable in and out from the computer. Put then as close to the computer as possible.

Most monitors already has a ferrite tube fitted to the video cable (that's the lump fitted near thehplug thet goes into the computer)

Seperating the radio AND it's antenna from the computer as much as possible will also help.

Another thing that could help reduce interferance is to ensure a goog ground bonding between the computer case and it's frame. Take the cover off the computer and scrape the paint from the inside of the case where it touches the frame in as many places as feasable.

Scrape the paint away from under the retaining screws OR fit the "ragged" lock washers under the screws so that the washers cut through the paint, thereby giving a ground bonding.

It all helps to cut the crap!!!

Happy scanning.

>you sure can. Thats the best way to beat an underpowerd audio
>section....

Another way is to add an ordinary extension speaker.

Consider the physical size of the built in speaker at best 1 - 1.5 inch with a very shallow cone. Often rated at only 0.2 watts.

This may be adiquate in a quiet environment, but the moment you turn up the power, distortion sets in.

DO NOT BE TEMPTED to drive the speaker into distortion mode! Permanant damage WILL be done to the speaker.

The speaker is nothing more than a small electric motor that pumps the cone in and out to create preasure waves in the air. If you overdrive this tiny motor, the "voice coil" will "bottom" in its slot in the magnet - this bottoming [at upto 3000 times a second (speech)] will cause a burr to be created on the bottom rim of the voice coil.

In turn, this burr will then scrape the inside of the slot in the magnet causing further distortion.

At all costs, DO NOT drive the speaker into distortion mode!

Adding an external speaker say 3 x 5 inches (available from any CB or Radio Shack / Tandy store) will improve matters. It meand that you can turn up the wick and pump MORE air about. BUT the audio amplifier will eventuall reach it's own limit.

I run an AR8000 in the car with a small extension speaker and have no need for another amplifier - without the extension speaker, I can hardly hear the radio when I am at speed!

Happy scanning

6095. UBC9000XLT FROM JAVIATION - PLEASE HELP

Newsgroup: rec.radio.scanner
Date: 1997-03-22 00:00:00 UTC
From: ubc9000xlt@aol.com
Message-ID: <19970322024300.VAA17165@ladder01.news.aol.com>
Source record: 203365

Hi,

I ordered a UBC9000XLT from Javiation (that UK group) and I would like to know if anyone has heard any stories on it, good or bad. It is exactly like the BC9000XLT from Uniden, except it has FULL coverage!! (Cell. Coverage)
Please give me some information and tips on this item. Also, if anyone knows, how long does it take to receive these items? .....I live in Houston, Texas and was just wondering when I am going to receive it. One last question I have..... Does anyone know what is a good antenna for this scanner? I prefer to buy a Radio Shack antenna with full frequency coverage on the antenna. Also, please tell me what cable I should buy.... I need like 75 feet of cable.
Well, Thanks Everyone. I would appreciate if you sent replies to my personal email address!!!!!

Amsat-NA is in need of donations to help complete and launch the Phase 3D satellite. Last report says we need to raise over $150,000. Launch date is only a few months away so we haven't much time. You're fooling yourselves if you believe that the money will magically appear come launch day or that someone else will donate the needed funds. I don't want to see Amsat bankrupt itself in the name of Phase 3D.

If 150 of us will call Martha at (301) 589-6062 and each donate $1,000 then we can be assured Phase 3D will be riding on the ESA rocket and not a cement weight.(cement looks good on the ground, not in space)

If 300 of us will call Martha at (301) 589-6062 and each donate $500 then we'll be able to enjoy the sounds from Phase 3D's transponders as it passes high over head.(I can almost hear it now)

If 600 of us would just call Martha at (301) 589-6062 and each donate $250 then we would have an excellent tool to use for recuiting new members into the greatest organization amateur radio has ever known: AMSAT.

If you have made a pledge to donate to the Phase 3D project and have not keep it, Martha is impatiently waiting to hear from you at (301) 589-6062.

If you have never donated to Phase 3D, you can put an end to that retched feeling of guilt in your guts by sending a donation to Martha at 850 Sligo Ave., Suite 600, Silver Spring, MD. 20910-4703

If you have never heard of Phase 3D, check out: http://www.amsat.org then call Martha at (301) 589-6062 and donate.

Did I mention that Martha likes to sign up new members too? If you're reading this and are not an Amsat member... Shame Shame Shame. Call Martha and sign up today, you'll sleep better for it.

If you live some place other than North America, send your Phase 3D donation to your local Amsat Organization(They all need project funds).

Source record: 203127

Help !?!,

I just bought a used Radio Shack Pro-39 and upon removing the back, I noticed that a coil appears to be squished over to the left. Could someone with access to a Pro-39 please remove the back on theirs and look at it for me? It is located at the top and labeled 'L302'. To the left of it is another (larger) coil label 'L301'. Are both coils mounted perpendicular to the board or is the smaller 'L302' coil 'pushed' over towards the larger coil? My guess is that it got squished but I don't want to move it if it's 'tuned' in that position.

Also, my scanner is missing two (of the four) screws that hold the back on. I've check local hardware stores with no luck. Anyone know of a convenient place to find some odd-ball screws like these?

So far, seems like a nice scanner for cheap...

Thanks for any help!

Return your PRO-26 to place of purchase or send
to Uniden for repair. It is definitely defective.
A 20 mA drain is far too much. The one I tested drew
only 10 uA. That's 2,000 times less current than your PRO-26 uses.

Try my home page -- click on index -- then scanner frequencies -- there
is a data base link there.

Does anyone out there know if our politicized justice department is anywhere near bringing charges against the Martins their violations of the ECPA? Furthermore, what about the Congressman who were involved in helping to disseminate the Gingrich conversation?

6119. PRO 51 CELL MOD!!!!!!!!!!!!!!

Newsgroup: rec.radio.scanner
Date: 1997-03-23 00:00:00 UTC
From: Edward Cox <i2567@netnitco.net>
Message-ID: <3335962B.4319@netnitco.net>
Source record: 203139
Cross-posted to: rec.radio.scanner,rec.radio.swap,alt.radio.scanner,rec.radio.amateur.equipment

The following instructions are for modifying your Pro51 to recieve the full 800mhz band in the normal 30khz spacing. The poster asumes no liabilty for this modification. This modification WILL DEFINATLY VOID YOUR WARRANTY!!! It is recommend that persons performing this mod have some experience in this type of work.

Parts Required:

Radio Shack Pt#96-0267 (CELL Mod)
" " Pt#90-8100 (Speed Incease)

Tools required:

Low wattage Soldering Iron (15W)
Solder (da) ;)
Small wire clippers
Small Phillips Screwdriver
Tweezers

Step 1. Remove/Disconnect power and/or Batteries.

Step 2. Remove screws from back cover, remove back cover.

Step 3. Remove IC Board #1, (requires unsoldering of of board connectors)

Step 4. Unsolder antenna lead from Board 2 (Center Board)

Step 5. Remove Board #2 (requires unsoldering of board connectors)

Step 6. On Board #3 locate nanoconverter (N-7) located between R214 and the mezafilter (large black IC, 64 pins)

Step 7. Remove N-7, Replace with picoconverter (pt# 96-0267)

Step 8. Speed Increase- Remove large blue speed control crystal, and replace with 1000mhz version (Pt#90-8100)

Step 9. ReASSemble in reverse order.

Now you can receive full cellular, and scan at 250 ch per second. (+/- 200 ch per second)

Now I won't have to see anymore request for Pro51 Mods, Right?

Have a nice day. ;D
Ed

6120. Re: transmit code for a scanner

RCnut68427 wrote:
>
> One of the firefighters I know told me of a code you can enter into any
> scanner and be able to transmit on any freq. If you know anything E-mail.
Gee - I thought EVERYONE know the code to enter. It's really quite
simple - when you enter the frequency, do it as you normally would BUT
push the decimal button 3 times instead of 1 time (on AORs you push it 4
times). In fact, and this is REALLY cool, if you have an unblocked
scanner, you can use it as a cell phone. Just punch in the ESN after you
enter the frequency!!!!! One caution - you should replace the factory
RECEIVING antenna with a Ham radio HT antenna. The cheap factory antenna
sometimes melts when you transmit below 150 Mhz. ;-)

Message-ID: <01bc025e$337c5960$24aa2299@arlen>
Source record: 203143

Taking 5 minutes to read what follows could be one of the best decisions you have ever made.

READ THIS!!!!

I saw an article in an internet newsgroup telling me that I could make $50,000 within a month for an investment of only $5.

I thought it was a huge joke. I spoke to my attorney, friends and family about it, and they all agreed it was some kind of scam. I can't stand scams, because usually someone gets burned, and I didn't want it it to be me. After rejecting the idea at first, I realized all I had to lose was the $5 in my wallet. I figured what the heck, and decided to give it a shot.

A friend told me that he invested $5 and two weeks later he began receiving money in the mail! Soon, hundreds, and then thousands of dollars began to roll in. Within 4 weeks, he had received a total of $32,445! It came from everywhere in the world.

If you follow the three steps below, there is no reason why the same shouldn't happen to you! This is a legitimate investment opportunity. You invest $5, and you receive a return on your investment. So does the next investor.
NOT ILLEGAL, NOT A CHAIN LETTER - PERFECTLY LEGITIMATE.

If you are not interested, then don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

The procedure is simple:

1) Write your name, address, and country on 5 sheets of paper. Below that, write the words, "Please add me to your mailing list." This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. You should use thick dark paper to discourage mail theft. Fold a $1 bill in each piece of paper, (no checks or money orders). The folding of the paper around the bill will insure its arrival to its recipient.
THIS STEP IS IMPORTANT!! and mail them to the following 5 addresses:

1. Binti Jua Hayes
616 NW 22nd St.
Wilton Manors, FL 33311

2. Iffat Ara Sadique
183-11, Hillside Ave., Apt 6K
Jamaica Estates, NY 11432

3. Adam Gross
4730 Pond Creek Road
Alexandria, KY 41001-9766

4. Roger. Romero
7121B Dakota Ave.
Fairchild AFB, WA 99011

5. Susan Walther
910 Waybourne Way
Lake Mary, FL 32746

2) Now remove the top name from the list, and move the other four names up. In other words, #5 becomes #4 and so on. Put your name as the fifth one on the list. You can do this by simply retyping the article or reposting it to other newsgroups with the edited addresses.

3) Post the article to at least 200 newsgroups. There are 19,000, so it shouldn't be hard to find that many.
LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!!

If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's
Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

You are now in the mail order investment business, and should start seeing returns within a week or two. Of course, the more newgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a psuedonym, but make sure your address is correct.

Now, here is why the system works:

The internet is growing at a tremendous rate - it doubles in size every 4 months. Think about it. You see those 'Make Money Fast' posts more and more. All that growth means profits for everyone who participates. There are no losers.

Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

Each person who sent you $1 now also makes 200 additional postings with your name at #4. ie. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. $50.

Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people=$500. They make 200 postings each with your name at #2=100,000 postings=5000 return at $1 each=$5000.

Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THATS IF EVERYONE DOWN THE LINE MAKES ONLY 200 POSTINGS! Total income in one cycle = $55,000.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. The more you post, the greater the return.

Lets review why you should do this. THE ONLY COST IS $5, AND 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS.

Some people have said to me, "what happens if the scheme is played out and no one sends me any money?" Big Deal, so you lose $5 - but what are the chances of that happening??

There are millions of internet users, and millions of new net surfers every month.

Remember - read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER - HONESTY IS THE BEST POLICY.
WHAT ARE 5 DOLLARS TO YOU?
YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $49? $122? Start making your plans, because it can happen to you.

Extra section:
HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

If you have Netscape 3.0 do EXACTLY the following:

1) Click on any newsgroup like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$ or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except insert your name at #5, and remove #1

off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX.

Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

NOTE: If you don't want to type in the whole article by hand, AND you know how to use a plain text editor (like Notepad), you can edit the file ahead of time, then attach it as shown in step 6.

5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc:

6) Here's where you're going to post all 200. OK, click on any newsgroup then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message.

Click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that if you did this right, you should see your file name in the attachments box, and it will be shaded green.

NOTE: If you don't want to type in the whole article and you know how to use a plain text editor (Notepad), you can edit the file ahead of time, then attach it.

IF YOU USE IE EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, highlight this article. Then press the "ctrl" key and the "c" key at the same time to copy this article. Then print this article for your records, to have the names of those you will be sending $1 bills to.

2) Go to the news groups and press "post an article". A window will open. Type in your headline in the subject area and then click in the large window below. Press "ctrl" and then "v" and the article will be placed in the window.

If you want to edit the article, do so and then highlight and copy it again. Now every time you post the article in a new newsgroup all you have to repeat is "ctrl" and "v" and press post.

3) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way it posts to 200 DIFFERENT newsgroups, or more.

You see? Now you just have 199 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it. REMEMBER 200 IS THE MINIMUM. The more you post the more money you will receive.

AND THAT'S IT!! THEY ARE ONLY STEPS!!!

>be someplace that offers them for less money.

I have a box of about 50 crystals that fit Regency, Radio Shack, and
other older scanners that use a 10.7 MHz IF. (This means that these
crystals won't work in any of the old Bearcat radios unless you subtract
0.1 MHz off what the crystal says.)

Email me at r_brown@getonthe.net for a complete list, if interested.

That's the whole band. (sigh) The majority of signals using SSB
modulation can be found around 50.125, and the majority of FM at 52.525.
These are the most commonly-used "calling" frequencies on 6m. If you hear
something there, and you're pretty certain that it's not a local ham, then
the band is UP!! That means you'll be able to hear radio traffic from
several hundreds to even a couple of thousand of miles away.

I think May is a good month to listen to 6m... :-)

Source record: 203152
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a Pro-60 that I picked up 3 weeks ago for the $199 sale price.

I swapped it for another today, due to the loss (totally deaf) of NFM & AM reception. Wide FM worked fine, and NFM signals could be listened to in WFM mode. (although with much extra noise)

It worked yesterday, no good today. The radio was no dropped or otherwise physically damaged.

I seem to remember someone else here having the same problem

Any info? e-mail me.

Barry

I would like to inform all Scanner Listening, Shortwave, Ham, Amature radio users and listeners, of a new mailing list in the Ottawa-Hull region, that caters to our region!

This email list is great for sharing information about scanner listening, ham radio use, amature radio use, & shortwave listening.

Although this list is geared for the Ottawa-Hull region, it is open to everyone, regaurdless of where you are.

If you are interested in joining the list, simply follow these instructions ...

Send am email message to majordomo@shell.taima.on.ca and in the body of your message type in the follwoing.

subscribe ott-scan your@email.address

(where your@email.address is your actual email address)

You will be sent back a message with an authorization code. You will be required to send the auth code back, in order to be added to the list. (This is to filter out unwarranted subscriptions).

You will be validated right away, and added to the mailing list.

My ott-scan mailing list listings are closed off to the public for your piece of mind. This way people cannot see who is on the list. This way, your email address will not be given out.

If you have any questions, please feel free to contact me.

Have Fun, and Happing Listening!

James Poulin
Ottawa, Ontario Canada.

> about the radios. I am currently looking to purchase a new scanner.

Raymond,
I own both units and if I could only choose one, I would
not hesitate to pick the 2045. The 2045 is a bit more but
has much more features and wider frequency coverage. It also
has a much better front-end than the 2037.
Go to my web page below and look under Radio Monitoring(not
hard to miss ;-) I have posted my recent review of the 2045
under my Pro-2045 information page.
Good luck and let me know if I can help further!

several cities in my area use MDT's (Mobile Data Terminals) However, the motor cycle, bicycle, and mobile (on foot) units do nothave acces toa MDT unless they are near an MDT equiped patrol unit. The MDT does cut down on someof the "information" traffic but you still hear the Traffic wrecks and the interesting stuff over the air. Some agencies are even equippingeach officer with a laptop computer to expedite doing their crime scene, arrest, and other daily reports. An officer can do his reports on his laptop, and when he gets back to the station, can either transfer the data to the main network by floppy disk or by attatching the laptop to the station LAN using a network card or PCMCIA network adapter.

Fire Departments also Use MDT's to provide directions to an incident as well as to allow the fire units to access a hazardous materials database from the fire scene. A Fire Dispatcher can send a unit to a medical Emergency and send the responding crew additional patient info via the MDT.

I found the Phoenix Fire department has a nice web site. Don't remember the exact URL, you can find it using your favorite search engine.

They have numerous pages offore info and safety tips!

From: ubc9000xlt@aol.com
Message-ID: <19970323085800.DAA13401@ladder01.news.aol.com>
Source record: 203187

Hello,

I think I just made a mistake when I ordered 100ft of Coax cable from Grove. I think all I need is like 50 ft (not sure). anyway, I was wondering if it is possible for me to just cut off 50 ft that is not needed and attach the end of the cable on to the Coax's connector end. To make this question simple, Can you cut RG6 Coax Cable to any certain length?

I am 90% sure you can, but would like a 2nd opinion. Please answer me via email. Thank You For your time!

Also take into account that a lot of auto glass is tinted with either
carbon- or metal-based compounds, and the glass then ends up shielding
(or conducting to ground) lots of signal. Everything else being equal,
figure on 80-90% attenuation of signal into and out of a closed vehicle,
compared to standing outside with the same radio or phone.

Yes you can cut it to any length to suite the situation.
Keep it as short as posssible to minimize loss of signal.

PMFJI,

I have a PRO-60 and noticed the same interference. Through trial & error, I noticed it happend when certain screen images were display (ie, WIN 95 screens instead of DOS). The problem went away when I used the batteries instead of AC.

Is there a filer I can use on the PRO-60 to cut out the noise? I'm also considering switching to a different antenna, but I don't want to add an outside antenna if I can help it.

Thanks,

Don

OK. I am going to help you with this, although I will literally have to write a book. The first step to take is not bypass caps, but see to it that the chassis of the equipment has a ground. If it all has three - prong plugs, then you have ground. if not, then you will have to run a wire from the main piece of equipment (usually the amp) to the center screw on the wall socket. Most modern amps have a ground screw on the back somewhere. See to this FIRST. It may solve your problem.

Ever heard of toroid cores ? you can get them from several sources. I am going to get into a discussion here. What most people don`t realize is that speakers actually appear, in the RF environment, as filters. Since the only frequency range they are designed to reproduce is the audio spectrum, they will effectively "pick off" any modulation on a nearby RF signal, and reproduce the modulation, while "filtering out" the RF portion. I believe this is what is happening in your case. Get some of these cores (Radio shack used to sell them, I don`t know if they still do) that are designed to suppress (absorb) RF. Install these on the speaker wires, close to the speaker. You will have to install one at each speaker. Just wrap the speaker lead thru it five or six times, and reconnect. Works REAL GOOD here, and I run a 1500 watt amateur station in the same house with home theatre. They co-exist in peace and harmony, something I couldn`t say before I put the cores on. There is about a 90 percent chance that this will work, but let me know how you make out..

Just what is your gripe with Cheek ,anyway ? The man has spent a lot of his time, effort, and money to provide us with the latest in scanner technical info, and since he is in the business commercially, he expects to get paid for it. The last time I looked, this WAS still a capitalist country, right ? The man has a right to make a profit for his efforts. This is how a capitalist system works. If you don`t like his books, then dont buy them! If you cannot stand to have the "novice" information repeated in every book, then don`t buy them ! Some of the people that buy his books NEED that information. I don`t need the novice info, but I don`t waste my time BITCHING about it, either. I have bought a LOT of books that weren`t worth the price I paid for them. But I feel his are worth the asking price, considering the amount of information provided in each one. (And I have more than a few). I have seen Bill "give away" information right on this news group (like the S - Meter mod for the pro 43), without ever asking for any compensation. You`re not gonna make too many friends down here bashing Cheek......

I have an ATT 9120 and am very satisfied with clarity and ease of
use...haven't walked around the block with it yet, but it has great
sound around the house and yard. No static, and on the occasion that
there was some type of interference, changing channels once is all it
took.

I just got this little baby...it's nice.

There are a few things that I'm sure you already know about. It will not scan cell phone frequencies and for some reason it will not allow the input of 25 channel cordless frequencies (even though) I could be making a mistake on the input.

Source record: 203212

Production on Uniden's TrunkTracker will begin on 15 April. I
imagine distributors will have it shortly after that. It has
been through FCC acceptance and has an FCC ID now. The FCC
actually asked for a sample (fairly unusual), before they would
pass it. This was apparently related to the recent cellular
"unpleasantness" and didn't have anything to do with the radio's
trunking functionality. It is not vaporware. I have also seen and
used the BC895XLT and it also works quite well but will not be
released for a few months.

> email, Thank You.

I purchased my cable a couple of yrs back from Burghardt Amateur Center, 182 North Maple St., P.O. Box 73, Watertown, SD 57201-2557

The most current catalog I have from them is the Dec '96 one. It lists a 100 foot length of 9913 for $59.00. When I purchased mine, they cut it to the length that I wanted.

You can call them at 1-800-927-4261 M-F 8-5PM and Sat 9-1 (their time zone I'm sure) and get the latest order price, ask for a catalog. FAX 605-886-3444 and service, 605-886-7314.

Besides myself, I know of several Hams who have dealt with this business and are satisfied with their service. You can also search out "belden 9913" on Alta Vista and you should find other outlets.

Regards,
LGS

Rich Wells (rjwells@vnet.ibm.com) wrote:
: Uniden typically carries a US/Canadian model(cell-blocked) as well
: as a European model(not blocked). The US/Can version would be the
: BC230XLT while the European version would be the UBC230XLT.

: There are a couple overseas places you can get the UBCs from but
: you will take your own risk getting it into the country. In other
: words, if US Customs decides to confiscate it, it is within their
: "right" and you'll have paid for a radio that you'll never get.

Not correct!

If you use a CREDIT CARD, you simply refuse payment of that line item
on the bill and enclose letter that the charge was for goods you did not
receive, this makes it the responsibility of the VENDOR at that point.

Furthermore, you send vendor notification you have refused payment and
will continue to do so until product is DELIVERED.

So you have nothing to lose.

david084@flash.net asked:
> What are the modes and freqs of airphones onboard jets????

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

800 MHz Air to Ground Telephone [22.1107]

- - Airborne - -
Blk Ch 1 - Ch 29

10 894.0055 - 894.1735
9 894.2055 - 894.3735
8 894.4055 - 894.5735 Guard Band -
7 894.6055 - 894.7735 .x765-.x797
6 894.8055 - 894.9735
5 895.0055 - 895.1735 Control Channels -
4 895.2055 - 895.3735 .x813-.x973
3 895.4055 - 895.5735
2 895.6055 - 895.7735
1 895.8055 - 895.9735

Transmissions are AM (or AM/SSB), and converting to digital.
Channels are spaced 6 kHz apart. A specific block of 29 channels
is assigned to each geographical area. Ground frequencies are 45
MHz lower and do not echo the airborne half of the conversation.
Service is used on passenger airlines.

Air to Ground Telephone [22.521]

Ch Ground Airborne

Signaling 454.675 (459.675)
6 454.700 459.700
7 454.725 459.725
5 454.750 459.750
8 454.775 459.775
4 454.800 459.800
9 454.825 459.825
3 454.850 459.850

We may be "stupid" in your terms, but at least we are literate and when we
attempt to persuade thousands of people to adopt my ideas, we don't
insult their intelligence by making 4th grade spelling errors.

6191. Icom IC-R10 and the easy mode

Newsgroup: rec.radio.scanner
Date: 1997-03-23 00:00:00 UTC
From: WinW <ufs00776@email.sjsu.edu>
Message-ID: <01bc3734$e40cc340$62194182@default>
Source record: 203265

When the R10 is in easy mode, the default FM broadcast band starts at 88.0 mhz and continues in 200 khz tuning steps to 88.2, 88.4, 88.6, etc. Anyone else have the same default in easy mode in FM broadcast? It seems that the R10 is not centering on any frequency in WFM mode and it sounds that way also. Does the audio sound centered while tuning in WFM such as 59.75 mhz (TV 2) or 98.5 mhz (or other station) or do you have to tune 100 khz above the actual frequency (eg., to 59.85 mhz for TV2) to here the audio clearly? Responses are appreciated.

6193. Scanner software -clarification apology- please let me waste your time some more

Newsgroup: rec.radio.scanner
Date: 1997-03-23 00:00:00 UTC
From: Chuck Uibel <cuibel@utah.uswest.net>
Message-ID: <01bc3742$e2b7d940$4ea96ccf@charlesu>
Source record: 203267

A while ago a wrote a nasty post about the available scanning software. I made every thing sound like crap, which isn't true - sorry to the authors. Several of them wrote me and it was nice to hear from them.
I should have written, as if I am some kind of expert:

8k is a clean, cool program. It's well organized and does a lot easily. Radio Manager takes on a lot and has some unique features. I like the look-up feature in search mode. It retrieves the name from the database if it comes upon a freq it knows. Some features don't work, like mass change for labels.
AR8000-3 and the term program included are neat. The term program is incredibly fast up/downloading. It requires Access, which everyone should have.
I didn't consider some of the other programs because they use pictures of ducks on the birdie button.

The feature I miss most is the ability to import all those freqs fast. That's the power of the computer and I wish it were easier to do. I thought with an AR8000, and all the computer gizmos to support it, I would have a better time getting the freqs in and out. Actually, I can get the freqs in, but not the text labels en masse.
With a thousand channels on AR8000, It's useless not to know what it is I'm listening to.

Of course, as anyone can have me tell you, I am a complete idiot. You probably guessed that after the first sentence.. If not, go back and try again.

Thank you and I will not soil your inbox again for a while

What's this I hear about satellite radio coming? Sorry if this has been discussed a lot and I missed it. What freq. will it be on? When is it coming? Will it be FM? I can't wait!!! Uh, Duh, do I need a satellite dish even to get the first (maybe experimental) broadcasts...or will my scanner pick it up. What if I go sit on the southwest corner of my roof with my scanner? OK, with my scanner and an umbrella?

..actually they do not work on the military band since they are not
"mil-spec'ed"...also the military services have not allowed the commercial
companies to build antennas that will pick up military communications. You
will have to go to a military surplus store that specializes in military
communications antennas...they can supply you with the proper antenna i.e. an
"aircraft antenna" for aircraft communications and a "ground antenna" for
military ground communications.....(; >.........

I don't have a manual, but how does your unit work? Does it do as advertised? What is it's range? Do you find it better than a radar dector? Does it compliment a radar dector? I am looking at the BCT10 and was wondering how satisfied you were with yours.

The GRE-made Pro64 is now available! It is replacing the Pro62, per Wayne Wilson, Communications Buyer for Tandy Corp. (The Pro60 will be continued for quite awhile.)

The $299 Pro64 has 400 channels, intelligent Auto Store (no duplicates!), 10 or 11 Wx channels built-in, 25 Search lockouts, triple conversion technology, supposedly the same IF freqs as the Pro62 (ie clean RR band!), 10 Priority channels, Scan/Search speeds are 25/50cps like before, and will be PC PROGRAMMABLE! You can upload freqs, but not download them; a simple program will be available at RS stores. The Pro64 will have a Scan/Search lockout review (ala Pro26), as well as Auto Skip whereby you don't have to L/O unprogrammed channels anymore.

Freq coverage is now from 29MHz (not 30MHz) thru 54MHz, 108-174MHz, 380-512MHz, and 806-960 (excluding 869.0125-893.9875)MHz.

Wayne just got his on Friday and I'll have mine tomorrow (Tues, Mar 24). I'm hoping that it lets us know if we are programming in a duplicate freq.

The Pro64 (like other GREs) runs on 6AA cells. A carry case will be available for it, although I don't know if it is ready to ship.

> the actual frequency (eg., to 59.85 mhz for TV2) to here the audio clearly?
> Responses are appreciated.

88.0 seems to be the default for the US bandplan units.
Even though this is wrong, all this means is that you have to
change the start frequency from 88.0 to 88.1. Simply edit
this number using the EDIT feature and you should be all set.
The radio will not start searching at 88.1 and with 200kHz
spacing, you'll get 88.10, 88.30, 88.50 etc.
As for the tuned freqeuncy, go to VFO mode and type in the
exact frequency you desire. If it does not show up correctly,
simply change the step size so that this frequency is valid
and re-tune.
If you do not receive the proper audio(distorted) when on
the exact freqeuncy, then I would suspect your radio is
not tuned properly and needs to be sent for "repairs".

EEB sells by the foot and in pre-cut lengths(25'=$30, 50'=
$35, 75'=$45 and 100'=$60). They can also put on just about
any connector your desire(RCA, UHF, BNC, N).

They are in Virginia at 1-800-368-3270.

Good luck!

I dont remeber which freqs are which. I just have a list I drag out every
year but the ones listed cover everything from race control channels
to the safety crews.
you can also go to
http://users1.ee.net/rp/indyfreq.htm
(or if I made a typo go to yahoo and search for things like "racing
frequencies" or like that) and you find more info (driver freqs etc)
I've been going for years and its great to listen to everything from
the Pace Car crash (2-3 years) ago to Race control giving the starter
directions on who and when to black flag cars. The freqs I listed above
havent changed in years.

New groups are notified to me automatically as soon as they appear
on the net. I usually see an average of about one or two new
newsgroups a day appearing.(This morning I saw 3) I do not have an IP,
I have a direct permanent connection to the net. As far as I am aware,
we do not have any form of censoring or filtering of any material on
the net at my site.

I am puzzled why I can see other new newgroups but have not seen the
aus.scanner group appear.

s>I find that silly. What are they going to hear the LO? I know thats
s>there rules however it's just silly!

The concern is that the emissions from the LO could throw off some of the instrumentation on the aircraft. Is it silly? I don't know, but I wouldn't want to find out by having the plane that I am on fly into a mountain. OTOH, some airlines will pipe the ATC audio into the headset, so if you get tired of listening to the canned music after a while, you can tune in to that.

ALL electronics, including laptops, handheld video games, CD players, must be turned off during take off and landing. As I recall, there are three classes of electronics, but I don't remember the exact classification. One of them, the one that cannot be used at all, includes receivers (including broadcast) and transceivers. The other two are at the discretion of the airline.

6219. pro-60 and diamond discone problem?

Newsgroup: rec.radio.scanner
Date: 1997-03-24 00:00:00 UTC
From: rotney@instanet.com
Message-ID: <3336fda6.6008088@news.instanet.com>
Source record: 203043

I've got a Diamond discone connected to my pro-2006 and they work very well together. I just went out and got a pro-60 over the weekend and am very pleased with it except for the following. When I scan 42-43MHz and 46-47MHz with the rubber duck it finds tons of stuff. When I hook up the rooftop discone I get only static in those ranges. All the other higher freq's scan fine. It just seems to be a problem with <50MHz-60MHz.

If I've got 42.12 on the 2006 and discone and then tune in 42.12 on the pro-60 and attach the discone I still get only static. But if I connect a BC3000 on 42 .12 it comes in fine. The local Radio Shack even let me take their demo unit home to see if it was any better. It wasn't. Same problem.

Anyone have an idea what the problem might be? Since I plan on using the pro-60 mainly as a portable with the rubber duck I decided to keep it but it still bugs me why the two units I tried seem to have the same problem. Maybe someone with a pro-60 and Diamond discone can verify with me. Thanks.

If your talking about the new 9510, I tried two of them, and they both sucked. The sidetone level was so high,that you could barely hear the person on the other end. Also there was a constant ticking noise, I think from the microprocesser. The range was no where near the 4000ft. claimed. Not much better that a 49mhz unit. If you put the base within 5 feet of anything with a audio amp in it, you will hear the transmitter data through it. They should have done some real world testing.

Every 3 db of loss cuts the signal level in half.... you figure it out from there.

R/S coaxial cable doesn't even make good clothes line, let alone an RF transmission line. Spend the extra money for the Belden... it's the best available.

I would think that criminals engaged in major crimes would use a wide
range of frequencies to avoid detection. Many major crimes would be
arranged via digital mobile phones or ordinary landlines. I doubt if
you could organise the major criminals in your area to use just one
frequency.

Looking to buy a new DAT deck, and my need for money is forcing me to sell my AR8000 :(. Here is the deal:

AR8000 Scanner,
4 NIKAD Batteries
Rubber Duckey Antenna that comes standard with the unit
Extended atenna that was purchased at Radio Shack
Power Adapter
Manual
Box it came in

(and has been modified for cellular by the fine folks at Grove Enterprises)

.....all for $425 or best offer.

*it is in very good condition, and is only missing the car adapter that was lost by the person I purchased it from.

Mail me if you are interested :)

Has your local police department already gone, or is it planning to go to a closed radio system? Trunked and digital radio systems are taking public safety departments by storm. Each agency adopting new radio technology has a choice to make. Will it lock out the police-scanning public with their new technology, or will it preserve open broadcasting?

For many police agencies it doesn't even rank as far as a "choice". All too often, police agencies are quick to choose to close out the public, failing to realize the public benefits that come with open or even proactive transmissions directly to the citizenry. In large metropoliton areas, open broadcasting may be the only way to dramatically create a sense of community and an integrated connection to the police. This connection, police say, is often vital to deterring crime.

I have been hosting a campaign in recent months (sorry to those tired of hearing from me, but the march continues!), to raise awareness about this issue and hopefully pursuade those in a position to change policy in their respective agencies in way that maintains or compensates open broadcasting. I have been mildly successful locally, but want to see this issue raised at a national level.

If you are interested in this matter, pro or con, you are invited to an IRC chat session on the issue to be held this Saturday, March 29, at 8:00 p.m. (EST) on the AnotherNet IRC network. The chat will be held in room channel #OPENBROADCAST. Server and other information can be found by clicking or visiting the related links below.

My Toshiba FTH955 900 Mhz digital doesn't have any echo either although
it does suffer from a few other audio distortions such as occassional
background 'clicking'. Its also a bit quiet when transmitting.

> Range is also as claimed, I maxed out just short of a mile. Note, however, that
> you WILL suffer from occasional audio dropouts before that point.

What type of environment did you test the range in ... on open land with
no obstructions or in town with houses & buildings blocking the line of
site to your house? In town my Toshiba can only do 500 feet. I also
tested a Escort Courier 9100 Spread Spectrum digital and it was good for
about 700 feet. 4000 feet seems hard to believe.

Donald,
Even though I have not personally seen a UBC9000, I would
expect to use the same CTCSS board. Doesn't your manual
have a section for installing/using this option? If not, give
a call to Javiation and they should be able to help.
Try starting at the web page listed below. Go to my
Radio Monitoring page and from there you'll see a Scanner
Dealers FAQ. Give a call to anyone who carries the Uniden
line. I believe the CTCSS board typically runs around $55US.
Good luck!

My mistake...you can disregard my previous posting since
I read the header to fast and thought I saw UBC9000 instead
of UBC3000.

The 3000 is not capable of CTCSS decoding via an installed
option like the BC890 or BC9000. Sorry!

Check out my web page below. Go to Radio Monitoring, then to
Antenna page. There is a review of handheld antennas I just
posted.

There can be no software control of current Radio Shack or
Uniden(who makes your Pro-51) models except for the older
Pro-2004/5/6 or newer Pro-2035/2042 units.

The Radio Shack close-out price just a few weeks ago was
$180 I believe. That would give something like :

$150 Pro-62
$ 15 Antenna
$ 10 Case
$ 10 Charger
$ 5 Ni-cads
---- -------
$190 Total

How's that sound?

WHO QUALIFIES FOR THE AWARD?
1. Licensed ham op (any level)
2. Scout or Adult Leader (past or present) or...
3. Any ham that know someone (Scout or leader) currently active in a Scout unit.

WHAT IS REQUIRED FOR THE AWARD?
1. Agree to respond to Scouts via email with their questions about ham radio in your local area, for 1 month.

HOW DO I SIGN-UP FOR THE AWARD?
Email to the address below and fill in the blanks.... that's it!
1. Name & Ham Call Sign:

2. Email address:

3. Locations: (ie London, UK; Los Angeles, CA, USA; etc)

4. What do you want to do: (email only; email & phone; email, phone & ham class)

5. Your Scout affiliation & position (enter past affiliation and date if applies):
(If no current or past affiliation) Your Scout or Scout leader sponsor:

6. Optional comments for your ScoutElmer listing: (ie. ARC Club listing, Explorer post, Troop etc.)

WHAT DO I GET?
ScoutElmer Award recipients will receive special award logo graphic you can add to your website. You also get a certificate (suitable for framing). Lastly the satisfaction that you helped promote amateur radio in Scouting.

If you've already applied for the award, sorry for the email. You should receive confirmation in the next few days.

Am building and AR 8000 interface to the cvomputer. I plan to exploit the squelch detect line, but I do not know which RS232 pin the various software reads for squelch status.
Anyone know?

Also, is the flexible flat cable a reliable means to connect the 8K to the computer? I worry about the wear and tear on it. Recommendations?

Thanks. Please reply to csmith1@ccgate.hac.com

Luc,
Go to my web page listed below. Then to the Radio Monitoring page.
Find the HS200 listed and go there. You'll
find basic specs, a picture and my review of this unit.
Good luck!

For Sale:

Yupiteru MVT-7100 Multiband Receiver.

In case one is not familiar with this receiver, here are a few of it's features:

This particular unit is NOT cell blocked, (from Canada) and receives from 530 Khz to 1650 Mhz in WFM, NFM, AM, LSB, and USB. The step size is selectable from 50Hz to 100 Khz. In addition it has:

1000 channels, in 10 banks
10 search banks
500 pass memory channels
1 priority channel
Backlight (neat green color) display as well as keypad
Battery saver mode
Telescoping antenna
Nicads with wall and cig. lighter chargers
Handstrap and belt clip
All the original packing, box, manual, etc.
Mint condition, works great; need cash for new toys.

$400 shipped CON. USA

If interested respond via E-mail.

Thanks,

Mike

Source record: 203109
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi this is some information that I sent to the trunk system users page today. I thought it might be of some use to others as well.

here goes

Bexar County:
Motorola 800 trunked type unknown. used in conjunction with San Antonio they share 60 channels with San Antonio using the majority of these freqs system operates in the 856-860 range county allocation is 2125,4375,7125 these are listed exclusively to Bexar County as Public Safety Trunked in the FCC database. however they can also be heard 2375,4875,7375,9875 Like I said this all appears to be a mutual shared use system. County Channels seem to be used for Sherrifs office and county Constables. all other services are VHF dispatch

San Antonio:

Several Motorola 800 trunked type unknown. the main trunk is shared with the county <see Bexar County> and used for Public Safety Pol/Fire/EMS. This trunk also handles most ancillary city services < i.e code compliance, park rangers, animal control> this trunk operates 856-860 on freqs 2625,4625,7625,9375, and 9625. these freqs are not the only channels that the city will use... there is overflow on the county channels as need.

In addition to the public safety trunk the city also maintains a trunk for City Public Service and at least one other operation only idented as "Security Operations"
this also appears to be a Motorola type system with 15 channels that operate between 856-860 on 2875,3375 and 3625. this are listed to San Antonio, City of and are classed as Trunked Other.

Additional Bexar County and San Antonio frequency can be found at

http://www.texas.net/~rush/baf.html

6270. Areonautical frequency guide

Anyone
> else have the same default in easy mode in FM broadcast?

Yes, but that is easily changed. I re-did mine to start at 88.1 and to step in 200 kHz increments. Use EDIT mode to step through the features and make changes. Hit FUNC and hold EDIT for two seconds to lock in the changes.

How do you like it?

6287. Scanner Sensitivity

Newsgroup: rec.radio.scanner
Date: 1997-03-24 00:00:00 UTC
From: *NOSPAM*tcoles@tor.hookup.net
Message-ID: <5h4g9l$9dm$1@loki.tor.hookup.net>
Source record: 203153

Got a question about scanner sensitivities, as listed in their manuals. For example, one scanner I have has a sensitivity at 127Mhz (AM Mode) of 1.5 uV, the second one has a sensitivity at 10 - 400 Mhz (AM Mode) of 0.8uV. Which is more sensitive?

Does the sensitvity indicate the minimum strength that the incoming signal must be for the scanner to pick it up?

Thanks.

Todd

From: mbv@flash.net
Message-ID: <5h4i8p$n7m@library.airnews.net>
Source record: 203155

Your not going to get enough power to the speaker wires to
cause the speakers to react as you described. Any wires that
come out of the chassis can however act as an antenna and
feed the signal to the amplifier which will then respond to the
modulation.
You will have to use toroid chokes on all the wires exiting
the receiver or amplifer chassis: The power cord, the speaker
wires, and all input connections. If the case is not shielded
properly, you will have to add shielding wherever it's needed
(remove paint from the cover at the point where it contacts the
front, back and sides.) Same with the bottom and front. Add copper
screen to cover any large holes, etc. No easy task. I had to do this
to my computer to keep the trash from radiating to my scanner.

>where you can transmit from your VCR to another TV. I was wondering if
>anyone had any idea what frequency I might find the audio on.

The thing will be transmitting somewhere between 902-928 MHz. Video is
AM, audio is a WBFM subcarrier 4.5 MHz higher. Try 915 first as the
most popular freq for the video, with 919.5 MHz for the audio. But the
things could be anywhere, and likely will be as they are not crystal
controlled and most of the cheapies drift as they warm up.

Hope this helps ..... Steve

ubc9000xlt@aol.com (UBC9000XLT) wrote:

>Does anyone know where I can get Belden 9913 cable? Please reply via
>email, Thank You.

Hello,

I recommend RF Connection:

The R.F. Connection
213 N. Frederick Ave. Suite 11-W
Gaithersburg, MD 20877
USA

Tech Support (301) 840-5477
Orders (800) 783-2666
24 hour Fax (301) 869-3680
e-mail rfc@therfc.com

http://www.therfc.com

We probably buy 100,000 feet of cable annually from them, and
thousands of connectors, and if we did such a thing we'd award them
Vendor of the Year. They have everything in stock, ship instantly,
perfect accuracy, and they know what they are talking about. Also good
for almost any weird connector, whether coax or otherwise. They've
found mates for some real oddball foreign military connectors we
needed once.

There is a new 9913F cable they're carrying now. Info on their
website.

Hope this helps ..... Steve

Source record: 203168

I used amplified speakers with good results, but even better is to use a regular amplifier fed to quality speaker(s). If you haven`t a stereo amplifier maybe you have a FM radio that has inputs for auxiliary equipment. The phono input will distort, but CD or Tape input is ok. Douglas

Factory warranty applies: this unit was unpackaged only for testing
and quality assurance, and then repackaged. It was acquired as a
warranty replacement spare to back up a handful of others that were
sold on a special one-time deal. Turns out that it was not needed,
and so is available, first-come/first-served. For full details on
WinRadio, including a demo, point your web browser to:

http://www.winradio.com

WinRadio was reviewed in gory detail in MONITORING TIMES and in the
WORLD SCANNER REPORT.

For a quick overview, see below:

The WiNRADiO card.

The WiNRADiO receiver card plugs into an expansion slot in the
motherboard of an IBM compatible computer. WiNRADiO is a micro-
processor-controlled 500 kHz - 1300 MHz (MF-HF-VHF-UHF) scanning
receiver, (less cellular), with connectors for an antenna and an
external speaker or a headphone.

The receiver is a PLL-based triple-conversion superheterodyne, with a
single 50-ohm antenna input. The receiver does not require any sound
card for operation - it contains its own audio amplifier, with a
connector compatible to standard multimedia PC speakers. If you have
a sound card, so much the better as a lot of interesting things can be
done in addition to the amplified audio.

There is an eight-position port address jumper bus strap on the card
(the factory default position is satisfactory for most applications),
which allow up to eight WiNRADiO receivers to be controlled by a
single PC.

The card is a full sized ISA card and consumes maximum 3.25W of power (at maximum speaker volume).

==========

General Technical Specifications

Receiver Type PLL-synthesized, triple conversion superheterodyne with low-noise RF circuitry and microstrip filters

Frequency Range 500 kHz to 1.3 GHz (less cellular)

Tuning Steps 0.5 kHz to 1MHz

Mode AM, FM-W, FM-N, SSB & CW with BFO +/- 5 Hz

Sensitivity 1uV (nominal)

Audio Output 200mW into 8 ohm load

6306. Looking for Motorola MTS-2000 handbook.

Newsgroup: rec.radio.scanner
Date: 1997-03-24 00:00:00 UTC
From: ajass@tabaqui.informatik.rwth-aachen.de
Message-ID: <5h5j7l$b6d$1@news.rwth-aachen.de>
Source record: 203172

Has anybody the handbook for a Motorola MTS-2000 portable transceiver handy?

I am looking for the intermediate frequency (IF) of this device and my local Motorola distributor (Motorola itself don't talk to endcustomers here in europe) only tells me that there is a block schematic in the handbook where I could find the IF. The problem is I have no handbook and the distributor says he has'nt also a handbook.

So if anybody has the handbook handy please email to me which IF's this device uses (1.IF = 10.7 MHZ???, 2.ZF = 455 KHZ???).

With best regards
Andreas

So, what does everyone think. Should I buy Belden (is it worth the extra cost?) or should I buy RG-6 (is it worth its low cost?). Someone please help me out and tell me how much of a difference it is to lose 4.4db vs. 2.8db. I would just like to know if 1db is really that great of a difference. Thanks For Your Help. Please reply via email.

Packet: kc8dqf@kb8rmx#semi.mi.usa.noam
==========
Date: Wed, 26 Feb 1997 17:11:07 -0600
From: lem@datatel.com

Greetings,

I normally don't send unsolicited e-mail, but based on all of my reading
I and still have FT-50 questions.

Would anyone with knowledge please take a few minutes and see if you can
answer any or all of my questions. (Some are elementary and some are
very technical, but any help is appreciated.)

My radio has the following serial number sequence: 6L130292 (but I've
been told this doesn't matter)

My Radio has 'freeband' mod: (de-solder blob "1", remove resistor "A"
above blob 1, pwr on with lamp/knob,press FW, pwr off, pwr on with
lamp/ptt/knob, change BAND=A* to BAND=FREE, pwr off, pwr on)

My Questions

1. Why cant I get my radio to go back into "BAND xxxxxx" anymore, it did
it one time during freeband mod? I am interested in going back to see
what the A1, A2, and A3 settings do, and if I should have
createdtemplates for each of these? I assume two of them are EURO(s)
and
one is US configuration of the radio, if so does anyone have the
template
files (.TPL) for the three of these they could send me (if my assumption
is wrong - - what are they and are there more, and can you send me
template files for all of them) ? I am also interested in getting to
the
INTERNAL SYSTEM ALIGNMENT so I can adjust the signal strength meter. I
knew I read this somewhere, but YAESU said there was no such capability,
help me???

2.
What are the various differences in the versions of the ADMS-1C
software?
(for example version 1.05 won't let you enter out of band frequencies
[200-300 and cellular] even though you have done the FREEBAND
modification, but version 1.04 will allow entry of out of band
frequencies). Would having an older version(s) of the ADMS-1C software
do
anything for me, and which versions should I get my hands on (and how
can
I find them) ?

3.
How can you get the all VFO and HOME memories programmed into the radio
from the ADMS-1C? Am I doing something wrong, are these a part of a
template file (.TPL) versus a radio file (.RDF) ?

4. Would someone be kind enough to send me the following .TPL files via
the regular mail (address below): • a standard US template [pre
modification / out of the box configuration] • either or both European
templates(EURO.TPL) with a desc of what each does do • any other
templates that do anything off-the-wall, neat, or special [send with
descriptions]

5.
Can someone tell me what each of these lines in my WIN.INI file do for
the
ADMS-1C?

[FT-50 Programmer]
AllowAnyFrequency=0
Calibrate=2909
Com=1
DataDir=C:\YAESU\FT50
TemplateFile=C:\YAESU\FT50\FREEBAND.TPL
UseTemplate=1

What happens if I start changing values of "AllowAnyFrequency", will
that
open it up so I can do the out of band frequencies via the software, and
if so what value do I use (I have tried 1 and null, neither work) ?

What does the "Calibrate" do, and what are my options for values here?

6.
Is there a users guide or some detailed instruction manual that anyone
has
written for the ADMS-1C?

7.
Is there a power on button sequence that will reset the microprocessor
without clearing memories?
Is there a power-on-button-sequence that will reset the microprocessor
AND

clear the memories?
What are all the different power-on-button-sequences and what do each of them do?

8.
Is there a mod for receive in the 25-75 MHz range ?
Will the radio receive VHF low band if I add 45.1x 2 to the desired frequency ? (ie. 52.250+90.2=142.450)

9.
Is there a mod for TX (or RX) in the 220+ MHz band ?
Is there a mod for TX in the 800/900 MHz bands ?

10.
Has YAESU printed new (revised) manuals for the FT-50 yet, I heard they were going to ?
Is there an advanced users manual yet (similar to what ALINCO did for the
DR-599/600) ?

11.
What happens when you turn off the CPU clock shift function ?
What would this be used for, scanning via some sort of computer like computer aided scanning ?

6311. Re: Pro-2038 vs BCT7 or BCT12??

Newsgroup: rec.radio.scanner
Date: 1997-03-25 00:00:00 UTC
From: wrh@cbemg.cb.lucent.com
Message-ID: <5h96br$537@nntpb.cb.lucent.com>
Source record: 202927

Can anyone help me decide on buying the pro2038 mobile RS scanner
or the Bearcat BTC7 or 12. I can't remember which bearcat has the 800
mhz. Anyway, i noticed the bearcat can have both, for example, the
fire and police bands scanning but the pro2038 seemed to be able to only
run one or the other at a time. Is this so??

also, the pro-2038 "pre-programmed" or any for that matter, were manufactured
some years ago. does this mean that the freq. in them may not be active or
not 100%??? I have run into this situation with this scanner called the
informant. i guess it was mfg. in the late 80's and unless you're in the
sticks, the law/fire radio freq. are either 800mhz or seemed to be diff.
from when the scanner was manufactured. How about re-programming???
probably not possible - huh?

thanks ->bh

> --
> Jeremy W. Hopkins
> http://www.toltbbs.com/~jhop/
> mailto:jhop@toltbbs.comWhat is really happening here is once you push the decimal point
twice
the scanner goes into the transmit mode; each successive push of the
decimal button increases the transmit power 3 db, i.e., 2 watts to 4
watts. The antenna melts if you push the decimal button too many times.
You see if the firefighter needs more distance out of his scanner, he
just keeps pushing the decimal button until he has enough power to raise
who he wants to talk to, assumming the antenna doesn't melt first! This
should work on all scanners. Another interesting trick is to push the
scan, 3 and 7 key simultaneously which doubles your receive/transmit
frequency. For receivers that tune up to 1300 mhz this will effectively
double your frequency to 2600 mhz!! Now if you push the decimal button
enough times you have a microwave oven!! (This assumes the antenna
doesn't melt first). You can cook a potato in 6 minutes!!!!!

When expansion of the original 666 cellular channels was contemplated,
the industry looked for an additional 11 MHz and hard-coded the channel
numbers into their standards. The FCC finally gave them 5 MHz (166 chs),
with the remainder going to airphone and public safety, but the channel
numbers stuck.

At what frequency are these specifications?

If it's at 1GHz I'd say the difference is negligible.

Cheers!

I can't comment on the printed guides, since everything that
I've ever wanted to know about airport radio frequencies I've found
in the marvelous site:
http://www.airnav.com/

Perhaps they can help you, too.

> is more sensitive?
>
> Does the sensitvity indicate the minimum strength that the incoming signal
> must be for the scanner to pick it up?

The number represents the strength of the weakest signal. So, the lower the number of uV (microvolts) the more sensitive the receiver. This number can be misleading though for a couple of reasons. For example, if it's rated at 1.5uV this could mean the limit of the squelch threshold, the singal required for 12dB SINAD or the signal needed for 20dB quieting.

Most people rate the sensitivity of receivers for 12dB SINAD. 12dB SINAD is roughly the noisiest signal that can still be readily understood by the listener.

To confuse matters further, some receivers are rated in dBm. In my opinion, and others, dBm is a better measurement than microvolts for receiver sensitivity. 0dBm is equal to 1 millivolt so -119dBm would be 119dB's below 1 millivolt. In a case like this a lower number would be better too, I guess!

In my experience, the sensitivity of scanners not only varies from band to band but also throughout the band in question!

Cheers!

L302 in mine is mounted perpendicular to the board but rotated very
slightly clockwise (looking down on it) so that the leads line up with
the PC board opening. Basically , no, it doesn't look squashed or
tilted over.

Can't help with the screws.

6337. Cincinnatti Frequencies

Newsgroup: rec.radio.scanner
Date: 1997-03-25 00:00:00 UTC
From: gary.saffer@channel1.com
Message-ID: <40.50619.2433@channel1.com>
Source record: 202953

Way back in February someone posted active Cincinatti, OH area frequencies for me. I recently came back from there and found the info pretty helpful. I also took a few notes, not too many since I was pretty busy, and thought I would post them here. Mostly what I listened to was in the 460 Mhz range, so that is what I have. I also found the PL tones for most of the frequencies.

Freq Tone Use Notes
460.025 110.9 Hamilton County PD East Dispatch
460.100 114.8 Cincy PD West Ch. 3 32xx units
460.175 110.9 Hamiltion County PD West Dispatch
460.200 114.8 Cincy PD Central
460.250 114.8 Cincy PD Northwest
460.275 114.8 Cincy PD Northeast 42xx units
460.300 110.9 Hamilton County PD Car to Car
460.325 114.8 Cincy PD Channel 8 Warrants, License checks
460.400 110.9 Hamiltion County PD
460.425 114.8 Cincy PD Channel 2 East 27xx units
460.600 151.4 Cincy FD Dispatch
33.90 Hamilton County FD Dispatch

Luckily, Cincinatti PD uses clear speech, and no codes for dispatch. This made listening very easy. I didn't hear anything on 462.950 or 462.975, and I could not find a second channel for Cincinatti FD, although it seems like there is one. All in all, the listening wasn't much different than the Boston area, although not quite as busy.

DC>Does anybody know if the UBC 3000XLT can be fitted with a ctcss
DC>board? If so, what would be the cost, and where could one be
DC>purchased? Thanks in advance.

Not as far as I know. Shortly after the 3000's predecessor was announced I was at an ARRL convention and asked the Uniden rep about this. His answer (between bites of a tuna sandwich) was a shrug followed by a comment that the radio was "too small" to accommodate a CTCSS board. This of course was patently ridiculous, since there were and are several ham radio handhelds that have CTCSSS. Since then of course, RELM has come out with the HS200, which has everything the 3000 has, and built in CTCSS.

...
Posting this list will be great.

You won't put any groups into your MTS2000 without the system key, however, and it has the correct frequency coverage, and you know the group sizes, even if you do have the talk-group ids, if that is what you meant.

If you have a Standard LTR/Motorola trunking radio and the system operates on standard frequencies (i.e. not split freqs), and you know the group sizes (or can guess) and you have the programming software then you could potentially program the Standard radio from the group id's.

But, if you already have the MTS2000 receiving this system you should already know the talk groups and can post them now??? Why would you need to wait for the TrunkTracker.

6346. FS: ICOM R-1 handheld scanner

Newsgroup: rec.radio.scanner

Cross-posted to: rec.radio.swap,rec.radio.scanner

For Sale:

ICOM R-1 full coverage handheld scanner (no breaks, including cellular,
from 100kHz thru 1300 MHz). Radio is in very good condition except for
paint flaking off the cast aluminum back panel. There are no scratches
or blemishes on the face or display. Price also includes BP-90 six AA
battery pack, AC adapter/charger, original antenna and instruction manual.

Features of the R-1 include:
- Uninterrupted coverage from 100kHz-1300 MHz, including military and cellular
- Automatic search-and-store capability
- Built in clock with power-on timer and sleep timer
- Signal strength indicator
- AM, FM and FM-wide modes
- 10 programmable search ranges
- Selectable steps of .5, 5, 8, 9, 10, 12.5, 15, 20, 30 and 50 kHz
- Tuning knob as well as direct frequency entry
- Internal nicads that recharge from wall wart.
- Separate headphone and line-out (for tape recorder) jacks.
- Very small; about 2/3 the size of a R.S. Pro-39

$300 shipped. For questions or to arrange purchase, send e-mail to
jdc@cci.com or call 716-654-2487 (work) or 716-381-3102 (home before 9 PM EST).

>
>Surely Germany isn't that far backwards as to ban them. Surely.....

I would rather somebody from Germany would answer this, but I believe
scanners have been legal in Germany for maybe the last 3 years or so.
At least scanners are freely sold in radio and electronics shops in
Germany, so the hardware must be legal. There may be some restrictions
on which frequencies you can listen on, but ...
Anyway, the scanners sold in Germany, seem to have a pretty much
unrestricted and unblocked frequency range.
You might ask in de.alt.radio-scanner, the German scanner newsgroup.

Regards

Peter

>frequency so on my Pro 41 I can pick up the subject of the
>conversation.)

In the manual mode, the PRO-62 battery save function shuts down the
receiver after after about 5 seconds of inactivity on the channel. The
receiver is briefly activated about once every second to check for activity
on the frequency, and goes back into normal receive mode when it detects
a signal.

The following sequence can be used to disable the battery save function.
It puts the scanner in the search mode, stopped on the desired frequency.

1) Set the scanner to the desired channel in the MANUAL mode.
2) Open the squelch by turning the knob counterclockwise.
3) Press either the up or down arrow button once.
4) Press the MON button.
5) Close the squelch by turning the knob clockwise.

(If you perform the keyboard steps while there is a signal present on the
frequency, it is not necessary to rotate the squelch knob.)

>
>why not just use an ohm meter? if theres any cont then theres water
>inside...

The cable may not be shorted completely. The ohm meter only checks for shorts at DC. If there is moisture in the cable, it may act as a low pass filter and DC will still be fine. However, VHF and Ultra High Frequencies may suffer a short to ground do to the moisture even if you don't see a DC short.

Well they have similar laws about freqs as we do but I don,t know
exactly what they are.
You will not have any trouble if you are military or military spouse.
Put your stuff in the hold baggage or household goods shipment and no
one even sees it. If you hand carry one just don't flant it at anyone.
But, if you do not speak German there ain't a whole lot to listen to
Plus their freq bands are different and there is lots of digital control
stuff.

Chris, I would be willing to bet the vid is between 902 and 928 Mhz. The 900 Mhz stuff usually has 3 freqs, about 909,915 and 921 or so. Look for the audio about 4.5 Mhz above the vid. Just a guess now!
Mark

Chris Chapman <clchapman@kih.net> wrote in article <01bc34e0$6da3c7e0$627369ce@station.kih.net>...
I recently purchased an 900 mhz video and audio transmitter and receiver for about $6 a piece at a "salvage" place. Just the simple kind of thing where you can transmit from your VCR to another TV. I was wondering if anyone had any idea what frequency I might find the audio on. I took the cover off but it doesn't have any kind of info inside, and it doesn't seem to have a name brand on it. All I can find is V-26305 on the front bottom right hand corner along with TNC 22852 and FCC ID:DT9TX-008AV on the bottom. It also has an AB switch on the back so I assume you can change the freqs it transmits on. Does anyone know what audio freqs it might use, or can anybody at least narrow the range down from somewhere in 900?

Thanks

Could be true for a lot of people, but in my situation, with MUCH searching, the data just isn't available. I am in a town of 100k, and only some freq's are available on the net. For small towns, they are non-existent, and a post might get you what you want. I have to scan freq ranges with mine, and it has no auto-store capability, so I am sure I am missing something, hence the request for freq's.

Don, get thee to a local Radio Shack and pick up a copy of "Police Call." You should be able to find all the frequencies you need to fill up your scanner's memory, and it has a good beginning technical reference section. Of course, there are other scanning references and frequency guides, but Police Call, IMHO, is the most convenient and readily available, therefore the best place to start.

Scanning is indeed a great hobby; I've been at it for 20 years now and my 220XLT rarely leaves my side.

Good Luck and Happy Scanning,

Hi there! I am wondering if anyone knows what 150.625 is used for in the Western Washington area. I've heard a huge variety, including DES, helicopter patrols, security-type tfc, and most recently, what sounds like Canadian SAR stuff. I live south of Seattle, and recieve this really clear. Sometimes, the repeater opens for intermod, so is it possible that it has no tone and I am hearing Canada over a US military rptr? This wouldn't be the first time.
TIA

I have never had any problem with a scanner on board a plane. I usually wear a sport coat and stick the scanner in the inside front pocket. I monitor the clearance, ground, tower, departure, center, approach, and company frequencies.

I listen via an earpiece .

a scanner DOES NOT generate enough RFI (Generates little or none) to cause any harm to aircraft electronics. Laptop computers emit much, much more RFI than a scanner ever would!!

6395. Re: 800 to 400 MHz converters?

Newsgroup: rec.radio.scanner
Date: 1997-03-25 00:00:00 UTC
From: llevy2@pacbell.net
Message-ID: <33381b54.4658741@news.pacbell.net>
Source record: 203020

Hi, Bryan:

I purchased one of these converters a number of years ago and it works great. I currently use it here in the office on my old Bearcat 210XL, so I can hear LAFD communications

The company that made the converter, GRE of Japan, had a US office (GRE America) located at 425 Harbor Blvd., Belmont, CA., 94002 This is in the SF bay area, so it might be in area code 415.

They also made a converter that could work on a handheld scanner. I recall seeing an ad for it in MT, I think.

I believe that sales of these converters are limited to stock on hand in the wake of the ECPA legislation a few years ago. If GRE can't help you, try Grove Enterprises, http://www.grove.net

By the way, GRE is the same company that made the Pro-2006 et al for RS.

Anybody out there have any suggestions for a decent scanner that isn't going to cost me an arm and a leg? I currently have the BC60XLT (I didn't think I would have any need for more than 10 channels... duh), and I would like to upgrade. Unfortunately I don't have much cash.

Any information is greatly appreciated.
Thanks!
Robert Griffith

Here's the scoop on the Pro64, out today!

400 channels in 10 banks of 40 channels each.

40 Monitor memories.

200 Search lockouts!

L/O Review (Scan and Search).

17 Preprogrammed Limit Searches

10 Programmable Limit Searches!

Shows how many channels are empty in a bank.

Numerous memory management/delete functions.

11 Wx channels preprogrammed.

25/50cps Scan/Search speeds.

Auto Sort!!!!!

5 second backlight

Intelligent Auto Search and Store (no duplicates and doesn't store L/O freqs)

Looks like a Pro60/62 and costs $299.

PC-programmable (1 way).

Duplicate channel checking!

This is a GRE scanner and replaces the excellent-performing Pro62. I've been
told that this is basically a Pro62, but with all the goodies noted above.

Sure, these are the ones I know:

VHF CH. FREQ
====================
16 156.800
WX3 162.475
08 156.400
04a 156.200
11 156.550
22a 157.100
62a 156.125
68 156.425
70 156.525
WX2 162.400
06 156.300
09 156.450
21b 161.650
18 156.900
69 156.475

Those are the ones I know of.

From: nxjunkie@aol.com
Message-ID: <19970325001300.TAA07512@ladder01.news.aol.com>
Source record: 203061

Well... with all the terrestrial television stations in the U.S. vacating VHF channels 2-6 over the next ten years, ever wonder what's going to happen to all that bandwidth?

Looks like it's going to police/fire/ambulance, etc... In congress, the push is on to re-allocate that spectrum for public safety. On the floor, the Oklahoma City bombing was cited as one reason for it. According to the people on the hill, emergency crews had to resort to runners carrying messages because the communication system was inadequate to handle a catastrophie of that scale.

My advice: Buy a scanner that gets the whole TV band now, before they restrict those frequencies.

I have a UBC3000XLT and it works well. I think the frequency transfer
you are talking about is the ability to set an upper and lower limit
to scan between. Whenever the scanner receives anything in that
range, it saves it to one of the memory channels.

Hope that helps

John

Aeronautical frequencies are covered in the Aeronautical
Frequency Directory, written by Bob Coburn, W1JJO.
I have a copy and it suits my non-military aero monitoring needs.

Although most of the information is about civilian aviation,
Bob included sections on military mid-air refueling and CAP.
The 401 page third edition is available from Official Scanner Guides
(P.O. Box 525-NS, Londonderry, NH 03053).

Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello friends,

I'm still looking for a fast scanner with the following features (by now, I've given up computer control because computer controlled scanners aren't fast enough, or am I wrong?...):

1. FAST search or scan (around 100 steps per second or more).

If FAST SEARCH, then must have cascadable search banks (at least two). The main issue is frequency span per second (i.e step size multiplied by steps per second):

If FAST SCAN, then must have at least 400 channels.

2. Support for one or more of search/scan steps: 10, 15, 30KHz. I'll settle for 5 or 12.5KHz only if previous steps are not available.

3. Support for 400-500MHz a must. 800MHz an added bonus.

4. Handheld prefered.

5. All features then same, a lower cost unit is prefered...

Thank's for any help offered.

regards,
techno

(P.S: please email me directly in addition to posting here, so no responses are missed. Thanks!)

In what environment do you get 4000 ft? Do you live in a small town,
big city, open farm land? I ask because you are the first (that I've
heard) to actually get the range that some of the 900 Mhz phones claim.
I only get 500 ft out of my Toshiba 900 Mhz digital is a small town
environment.

>>successive push of the decimal button increases the transmit power 3 db,

>>i.e., 2 watts to 4 watts.

Thanks. I tried it and it worked just great! The scanner gets out a lot better than my CB does. Heck, people thought I had some kind of amplifier on it. What I don't understand, though, is why those airline pilots seemed to get pissed off when I called them. I mean, don't they say fly the friendly skies and all that stuff? They sure didn't seem too friendly to me! But then, neither did the police dispatcher when I called her a few minutes ago. I guess she's interested, though. She asked for my name address and phone number. Oh well, gotta go. Somebody's knocking at the door . . . . . .

6423. FS: Radio scanner converter (810-950 Mhz converted to 410-550 Mhz)

Newsgroup: rec.radio.scanner
Date: 1997-03-26 00:00:00 UTC
From: falatic@materials.ecn.purdue.edu
Message-ID: <5hc5ju$ghu@mozo.cc.purdue.edu>
Source record: 202833

o GRE Super Convertor 9001, receives 810-950 Mhz, down-converts them
to 410-550 Mhz. Uses 9v battery (included), has RCA/BNC output
adapters, uses a standard BNC-style antenna (not included, usual
configuration is in-line between your antenna and scanner).
Passes-thru when Off. Original box and info, works perfectly.
Asking $85 OBO.

Probe 3.0 was just released (3/17/97) and is more current.
Also, I believe that the license agreement forbids resale of
this software without express written permission of Datafile.

> and haven't got burned yet, knock on wood!

YES! Alot of folks don't like sending COD, our store
mails products everyday for orders from our web site
and I won't mail COD at all. But our store is pretty
easy to verify that it is legit. We have 1-800 #,
we are listed in our cities phone book, we have employees
and you can tell if you call, we can be found in ANY
internet searcher! Our employees HAM callsigns can also
be looked up on the internet... and we take credit cards
ha ha.....See it is really
quite easy to do a little work and determine whether
someone is legit enough to deal with...

I dont even have a problem sending money in advance if
I have talked to the individual on the phone and done
a couple of easy searches and still feel good about the
individual.. I have bought stuff LOTS of times...

Just have to fight the greed when you see a deal this
good and check em out first.

Since I posted the message about the possible scam I
have had numorous emails from others, some have actually
sent money to him already... I did a few more searches
and determined his mailing address is a company called
HELP U MAIL in Reno NV,...

Some of the victims are really upset, and have actually
contacted the Reno police about this already!
Maybe they can catch the guy!!

Seems like a suspiciously LOWprice
Seller will only allow cash up front no CODs also suspicious
told me he lived in Portland, then in another message
told me he lives in Reno NV! Suspicious!
His phone number is a pager with voice mail! Suspicious also!
his message was posted VIA Deja News (not easily traceable)
his email address is a free mail forwarding service! and not
his real ISP... VERY suspicious!

When I asked him for references his emails to me stopped
suddenly!

Doing some snooping around I found he also has a HOTMAIL
address wich is ALSO notoriously untracable!

Doing an activity search for his known email adresses to
see if he has ANY credibility at all I found that MANY
messages have been posted from these two apprearantly
bogus adresses in the last few days! ALL of the messages
are for expensive items for sale!!!

according to Deja News he has posted EXPENSIVE items for
sale in ALLthese newsgroups ALSO.. He is trying to sell
everything from $1000 basketball tickets to expensive
computer parts!

2 comp.sys.amiga.marketplace
2 comp.sys.ibm.pc.misc
2 rec.radio.scanner
1 alt.comp.sys.palmtops.hp
1 comp.sys.mac.portables
1 misc.forsale.computers.pc-specific.audio
1 rec.arts.sf.starwars.collecting
1 rec.bicycles.misc

1 rec.sport.basketball.college

After a small amount of research and a few
emails exchanged with this guy Idon't think I will send
the money. Looks too suspicious to me, anyone actually
think he is legit???

his mailing address is a place called
HELP U MAIL in reno NV. thier number is 702-851-1960
probably a mail forwarding service.
I'm not sayin he's a crook! But it is always best to
BE CAREFULL!

Does this model have a manual tune adjustment? I used to have a sound feeder, don't know what model. Anyway, you had to manually set the frequency. The only problem was that this was VERY hard to do exactly, and only lasted about 15 minutes before it needed resetting because the frequency would drift. This thing will try your patience more than ANYTHING else in car audio!

Might be better to modify your scanner to have wires coming out that are connected to the speaker leads. Run this into a line-level/rca converter, and finally into the rca system in your car.

6452. BP2500 battery packs for the BC-2500 and BC-3000

Newsgroup: rec.radio.scanner
Date: 1997-03-26 00:00:00 UTC
From: "James F. Boehner, MD" <jboehner@csra.net>
Message-ID: <3339EEA3.1D4C@csra.net>
Source record: 202862
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi Group!

FYI:

I read a number of posts some time ago complaining about the battery pack for the bc-2500/3000, as it is a one piece unit, and does not use the "AA" nicads.

I have three of these packs, and found that two had died and one has lost its ability to hold a charge for more than one hour of use.

Solution:

Mr. Nicad at (608)831-3443 or (608)831-1082 FAX sells the complete Battery Pack for $39 and the NiCd insert ONLY for $19.

I easily opened the case of these packs. You will need to break up the glue that attaches the batteries to the case (gentle pressure), desolder, and then resolder two connections, and put the case back together (glue not really necessary).

For $19, rebuilding the battery pack really is a good idea. You might do better by comparison shopping, though!

I have both the SCOUT 3.1 and the Startek ATH-50 with the the TCXO
option. I use the Startek for actual frequency counting, and the SCOUT
for near-field frequency finding (for scanning purposes). I really like
the Startek unit. Additionally, you probably met the CEO of the company
at the hamfest. I upgraded my unit at least twice with his help. He
allowed me to upgrade at a reasonable cost each time!

Interestingly, the CEO of Startek used to be married to the CEO of
OPTO!
I have many of the OPTO products. I used to be very impressed with the
company, but of late they seem to have become "too big" for the
individual consumer.

Jim,

Suggestion: Go to Walmart and buy some inexpensive "ear-bug" earphones.
These are the type that fit right into your ears with no over the head
piece.

Next, at the same Walmart, go to the sporting goods department and pick up a
good set of shooting ear hearing protector.

At the race, plug in your ear phones and then the ear muffs. Much cheaper
than trying to find something specifically made for the races.

Cheers

Brian

Has anyone had any dealings with a british mail order firm called multicomm2000? They had VERY low prices supposedly on scanners. Also has anyone had an oportunity to play with the new Welz ws 1000. Like to hear some commentary. Thanks in advance.

A regular earphone will work, but only one way - cover it with a set of
Saf-Ear-Sheilds, or equivalent. These are the hearing protectors worn
at shooting ranges and my many aircraft ground crews. Otherwise, you
will need a set of 25 dB reduction (minimum!) headphones like those sold
by Race-Scan, Racing Electronics, etc...

With JUST a $3 earphone, walkman type headphones, or standard stereo
headphones (even the "big cup" type), you will have to turn up the
volume so loud, you will risk hearing damage.

Don't skimp, trying to turn the earphone volume up loud enough to be
heard over the average race WILL irrepairably damage your hearing.

Hi All!
I've been out for awhile, so I apologize to those I was messing with the MDT program with (Bobby!). I've given up on the MDT stuff, there simply isn't any traffic I can find around my neck of the woods (Raleigh, NC).
I have, however, started playing with the trunker.exe program running around, and find it to work pretty well. I'd like to get it interfaced with my OS535, to turn my computer/scanner pair into a TrunkTracker of sorts. I'd like to hear from anyone who has had any luck programming the OS535, or has actually made any progress towards this end.
Thanks in advance, and I look forward to hearing from you!

Sincerely,
Robert McIntyre

>has that but this "dream scanner" would have everything YOU want.

>If you want to e-mail me: james.hopkins@lmco.com

I've been thinking about this and this is what I've come up with...

- Coverage from 25 to 1900 MHz

- Trunk tracking of all TRS systems regardless of frequency

- Banks would have names, not numbers, and have a dynamic size...

...so you could have, say, Whoville Police in a bank with WPD's 4
freqs

...and also Megaville Police in another bank with its 39 freqs

- Channel numbers would be meaningless since you would scan a named
bank rather than a collection of channels.

- You could easily cross reference these banks to give you the
flexibility to, say, scan all police frequencies, or scan all Whoville
freqs (fire, police, ambulance, sewer dept., etc.)

- It could read the morse code identifiers sent from repeaters then
look up the station on a CD-Rom either in your PC or inside the
scanner itself.

- A web site would be available where with a Netscape plug-in you
could download into your scanner known banks. Say you're going to
Disney World. You would click on the Disney World bank info and BANG,
your scanner now has a Disney World bank. It also knows which
frequency is used for what purpose. While you're at Disney you won't
have to wonder what 154.635 is used for... the scanner will tell you.

- The scanner can operate in trunked mode and normal mode without
having to switch back and forth.

- The scanner would be available in handheld and tabletop/mobile
configurations.

Anyone care to design this puppy? ;-)

> 119dB's below 1 millivolt. In a case like this a lower number would be
> better too, I guess!

You are right that a lower figure is better.

BUT that's not the whole, story.

If you talk about dbm, this is related to 50 ohms. The reference
(odbm) is 1 milliWatt (not millvolt!) in 50 ohms, so to quote
sensitivity in dbm really is only meaningful if, AND ONLY IF, the
scanner input impedance is 50 ohms, and a lot are NOT.

A signal of -107 dbm is the equivalent of 1 microvolt in 50 ohms.
1/4 of a microvolt is -119 dbm (in 50 ohms).

Incidently, another factor that determines the weakest signal that
you might be able to hear is the local RF noise floor. In most city
environments, the noise floor is considerably above the sensitivity
of the receiver and is the limiting factor for the weakest signal
you can hear.

You can imagine this to being in a room at a party and everyone
is talking. You might need to shout just so the person next to you
can hear, but if everyone stops talking, you can hear a whisper.

Hope this information is useful.

It depends what you are gona be tring to hear while racing. If it's the other drive teams then it would depend on the freqs they are using. But I think anyone involved in autoracing could afford something better that would cover say 10khz to 5gighzs with possiably a spectrum anlyz feature. I bet as soon as the other teams find you are scanning them they'll go to a secure system.
Your best bet is to plant a MOLE in their org.

I think if it was taped from tv news bc you would be in violation of news
station copy rights. not covered by fcc. If you taped from scanner "live" and
redistributed with out permission of sender this may be a violation of fed
statuates.

I haven't said two words to this clown, but since he still thinks its his perogative to insult people without cause. That's been his standard or operation for quite a while. The truth is, if he knew something about scanning, he would post it. The sad fact is that he is simply an idiot who hangs around here making up these sorry-ass jokes.

Come on Glenn, why don't you enlighten us? Why don't you send us a cogent observation or two about the latest software, or a new antenna that you may acquired? Do you know anything at all about scanning or is this the best that you can do? Yeah, that must be it.

Come back when you're willing to act like a mature adult and not some backwoods offspring of a pair of genetic defects such as your parents.

Michael,

When ever Bill C. Posts something you PJB always has something to say.
What about the other people lately that have been posting items
for sale. You say you want to comercial posts. But, it is
only Bill C. you have a problem with. Freud has something to
say about you and PJB. PJB never has anything positive to say.
He needs to increase in medication. It will get him out of his
negitive mode. Maybe talk to his doctor. We don't need a stalker
trying to kill Bill C. because some fool forgot to take his medication.

I have had a scanner operting in a small plane. In a cessna, a scanner is
far closer to the avionics than it could ever be in any airliner. NEVER
had any problem.

try using an Oscillocope or spectrum analyzer to look at the RFI a
scanner gives off and compare that to a laptop computer!!!

Gerard, I have no idea if this would work or not, but Electronics Now Jan '93
has an article on a digital voice changer that actually shifts the pitch of
the voice up or down one octave in 16 steps. It's based around a MSM6322
speech pitch control chip from OKI that costs $15 according to the parts list.
It just might work!??? If you want a copy of the article, give me your snail
mail address and I'll send it to you.

I'm curious to see if it works. I just build a speech descrambler from an old
Radio Electronics article and I haven't managed to get the 3.5Khz carrier
frequency out of the recovered audio. As soon as I turn it on, the cat starts
to go crazy and I am forced to turn the speaker over on the table as it hurts
my ears too.

> > scanner and be able to transmit on any freq. If you know anything
> E-mail.
> >
> >What do you mean? Didn't you see my post that got deleted? I will
re-post it here:

What is really happening here is once you push the decimal button more
than once sequentially, the scanner goes into the transmit mode; each
successive push of the decimal button increases the transmit power 3 db,
i.e., 2 watts to 4 watts. The antenna melts if you push the decimal
button too many times. You see, if the firefighter needs more range out
of his scanner, he just keeps pushing the decimal button until he has
enough power to raise who he wants to talk to, assumming he doesn't get
to the point where the antenna melts first. This is why many replace the
scanner antenna with a heavy duty transmit antenna. By the way, this
should work on all scanners. Another interesting trick is to push the
scan, 3 and 7 key simultaneously which doubles your receive/transmit
frequency. For receivers that tune up to 1300 mhz, this will effectively
double your frequency to 2600 mhz!! Now if you push the decimal button
enough times you have a microwave oven!!! (This assumes the antenna
doesn't melt first). You can cook a potato in 6 minutes!!!! This is
great for those late night snacks....

While I'm on the subject, if you're one of the lucky ones to have an
inverse key on your scanner, pushing this key FIRST and THEN successively
pushing the decimal key will drop the noise temperature of your scanner
essentially giving you more range. This has its limits though....

That's enough!!!!

If you get really stuck, remove the battery pack, hold the
"Microprocessor Reset" button in for a slow "5-count", release, press
again once (briefly), then re-install the battery and turn the scanner
on while holding either the Lamp and 0 (zero) keys, or the Manual & 0
(zero) keys, if there's no Lamp switch on your scanner. This will work
for most scanners, if the above suggestions don't help for yours. ;-}

That is patently untrue. I defy to go back and look my the posts that I
have made in the past six months. I also urge you to contact Bill Cheek and
ask him whether I have been responding negatively to his posts!

> What about the other people lately that have been posting items
> for sale. You say you want to comercial posts. But, it is
> only Bill C. you have a problem with.

That too is patently untrue. I have posted several "keep this commercial
crap outta here messages" in recent months. In fact, I have completely
ignored any that Cheek has posted.
G'wan ask him instead of talking about things you know nothing about.

Freud has something to

Well take it up with PJB and leave me the hell out of it. My participation
in this started when you told someone to say something useful about

scanners and I suggested that you follow your own advice.

Just a suggestion -- rather than be a "bad neighbor" with the other folks around you who may not want to have to listen to your scanner, how about an earphone? That will concentrate the sound you want to hear in one ears, block some of the ambient noise on that side, and still not bug the other people around who might want to try to talk amongst themselves without the distraction of your radio (unless you're going to a trotter race; those horses are pretty durn quiet...)

Seems like a suspiciously LOWprice
Seller will only allow cash up front no CODs also suspicious
told me he lived in Portland, then in another message
told me he lives in Reno NV! Suspicious!
His phone number is a pager with voice mail! Suspicious also!
his message was posted VIA Deja News (not easily traceable)
his email address is a free mail forwarding service! and not
his real ISP... VERY suspicious!

When I asked him for references his emails to me stopped
suddenly!

Doing some snooping around I found he also has a HOTMAIL
address wich is ALSO notoriously untracable!

Doing an activity search for his known email adresses to
see if he has ANY credibility at all I found that MANY
messages have been posted from these two apprearantly
bogus adresses in the last few days! ALL of the messages
are for expensive items for sale!!!

according to Deja News he has posted EXPENSIVE items for
sale in ALLthese newsgroups ALSO.. He is trying to sell
everything from $1000 basketball tickets to expensive
computer parts!

2 comp.sys.amiga.marketplace
2 comp.sys.ibm.pc.misc
2 rec.radio.scanner
1 alt.comp.sys.palmtops.hp
1 comp.sys.mac.portables
1 misc.forsale.computers.pc-specific.audio
1 rec.arts.sf.starwars.collecting

1 rec.bicycles.misc
1 rec.sport.basketball.college

After a small amount of research and a few
emails exchanged with this guy Idon't think I will send
the money. Looks too suspicious to me, anyone actually
think he is legit???

I'm not sayin he's a crook! But it is always best to
BE CAREFULL!

Hi,
I don't know if the scanner I have is what you're looking for, but I
thought I'd try. I have a NEW Realistic PRO-2006, 400 Channel
FEATURES:
Two-Speed Hyperscan Searches and Scans - 26 Channels per Sec. in
Fast Mode and 13 channels in Slow Mode.
Covers 25 to 520 MHz, 760 to 823.945 MHz, 851 to 868.945 MHz
and 896 to 1300 MHz Continuous
Zeromatic tuning for best reception.

2-sec. scan delay, selectable for each channel.
Selectable priority can be set to any channel so you can also
check on your most important channel.
Scans in frequency steps of 5, 12.5 and 50 kHz

AND MORE.

If you're interested, please e-mail me at dnjmusial@worldnet.att.net

Thanks.

This is slightly off. The correct sync is:

Sync Sequence: 000101010101010101010111100100100101010101010101
or 155557925555 HEX

The above CRC is actually a BCH (Bose-Chaudhuri-Hocquenghem) code.

As stated before, there are 28 information bits and 12 bits of BCH
code in each 40 bit word.

Can anyone assist me with writing a routing in "C" to check errors
using this BCH algorithm?

thanks,

Joe

Hello All:

I have Probe v2.0 scanner control software for sale. Works with Radioshack scanners equipped with either Optoscan 456 or Optoscan 535 boards.

Original manual, original disk (3.5").

I'm selling the software because I evaluated it against other software, and it does not suit my needs.

Asking $75.00, shipped.

Any questions, please email.

Content-Disposition: inline; filename="EDACS.TXT"

Hello everyone,

I've been looking around a little bit to see what I could find
out about GE / Ericsson's EDACS trunked radio control channel
protocol. Although I didn't find enough information to allow one to
decode talkgroup and frequency assignments, I think I did come up with
enough to allow someone to receive outbound control channel messages.
Perhaps someone else can then figure out how to interpret these
control channel messages and be nice enough to post their findings and
perhaps even design and market something like a "Trunktracker" board
for EDACS systems (and while you're at it please make it do Motorola
trunked systems too, and also act as an decoder for Motorola and
Mobitex mobile data terminal transmissions, POCSAG/GOLAY/FLEX paging,
CTCSS, ACARS, subaudible signalling, digitally coded speech, et
cetera).

The control channel data is transmitted over the air at 9600 baud
using Gaussian Minimum Shift Keying (GMSK). The upshot of this is I
think it should be possible to receive the control channel using
something as simple as the clipping circuit used to receive Motorola's
trunked radio control channel or mobile data terminal transmissions.
It would probably be a good idea to use Dejanews or Altavista to find
postings giving more information on those Motorola systems since they

explain some of the same things I'm going to talk about here. It might even be possible to rewrite one of the posted Motorola programs even though the coding and commenting style of the original writer will probably make you slowly rip all your hair out of your scalp.

Like any other digital system, there has to be some way of letting the receiver synchronize with the start of a transmitted message. This is done by regularly sending the following 48 bit synchronization sequence:

Sync Sequence : 000101010101010101010111000100100101010101010101
(or 155557125555 in hexadecimal notation)

Every time one sees this sequence in the received bit stream one knows that the following 120 bits form a transmitted message. In order to increase the number of messages transmitted each second GE decided to send the sync sequence before only every second message. So the transmitted data stream looks something like:

Frame sync, message slot 1, message slot 2,
Frame sync, message slot 1, message slot 2,
and on and on it goes

Some important system status / information messages will be repeated in both message slots.

Now that one knows how to pick off the individual messages off the air one must convert each 120 bit long message into the 40 information bits. This turns out to be really easy: the 40 information bits are sent in order repeated three times. The second time all the information bits are inverted. Effectively one has a really primitive and wasteful error correcting scheme - in the received message invert bits 41-80, then read off the information bits given by bits (1,41,81), (2,42,82), (3,43,83) and so on. If no receive errors occured then all three bits in each position will be the same. If an error occured just ignore that bit that doesn't match the other two. I'm not sure why the system designers didn't use some sort of convolutional or block error correcting code which would require much less overhead (maybe the designers had been smoking a little too much of that wonderfully wierd wacky weed).

One verifies that the received information bits are correct with a cyclic redundancy check. There are 28 actual information bits while the remaing 12 are the transmitted CRC code. One can calculate the CRC code using the following procedure:

1. Load a 12 bit register R with hex 7D7
2. Zero the 12 bit CRC register
3. If the information bit is 1 then
XOR the CRC register with R
4. If the rightmost bit of register R is zero then
shift R right by 1 bit, otherwise
shift R right by 1 bit and then XOR with hex A9C

5. Go back to step 3 until all 28 information bits
have been processed.

This calculated CRC should match bits 29-40 of the message or else the received message must be considered invalid.

At this point I've pretty much exhausted all of my information sources. I don't have any information on how the 28 information bits are formatted or translate into frequency and talk-group assignments. I would imagine that anyone who gets a decoder up and running for an EDACS system should be able to figure such things out in relatively short order. I also don't know whether or what information an EDACS system sends to mobile data terminals over a trunked system control channel - some literature seems to imply that the trunked control channel signalling can be used for more than just handling the trunked radio system.

Finally, this has been posted semi-annonymously in an attempt to deflect unwanted attention from various corporate or governmental security apparati. While I do not believe any of this information is confidential I do remember Henry Kissinger saying "Even paranoid people have enemies."

Incomplete as it may be, I hope this information has been of some interest. Maybe someone else knows more or can pick up the ball and do something practical with it. Please let us know what you find out.

6508. Cincinnati Frequencies

Newsgroup: rec.radio.scanner
Date: 1997-03-26 00:00:00 UTC
From: cr933@cleveland.Freenet.Edu
Message-ID: <5hbvjp$9ec@alexander.INS.CWRU.Edu>
Source record: 202922

Does anybody know the freqs used by the Cincinnati Police Department??

Basically I was wondering if they are trunked and whether they use Motorola radios. I will be moving there and am deciding if I should buy a BC235XLT. Also what are the freqs used by Univ. of Cincinnati, are they trunked, Motorola??

Thanks,

Mike

Scanners do not transmit! Accept It!
The only codes that work on my BC 200 XLT
are to hold down 2 9 manual and turn on the power.

Clears the memory and resets to 000.000

-Hold down 2 9 and scan clears all memory though sets your scanner to
preset factory test freqs that are rejected during normal operation
with an error message.

What company was this "fire fighter" associated with (i.e.
Town/City/State/Zip and his name because I will personally write him
and ask him the same thing.) and "why would you even think that a
scanner can transmit" All you want to is illegally transmit on cell
channels/frequencies and impress your peers. The news that I have
will "extinguish" your "hot flashes" of fame and fantasy and that is
-"Scanners Receive ONLY!! 2-way radios transmit and receive at half
duplex , cell phones are in full duplex."

Remember : Scanners Receive ONLY!

Who was the firefighter?
What Fire company was this individual associated with?
Where was this taking place at?
When did you realize and accept the truth that Scanners Do NOT
Transmit?

How did you know this individual was a firefighter?
Why didn't you ask him for the frequencies so you could be on your
way?

6514. Any Mod.'s For 2026 Besides Cell????

>claimed. Not much better that a 49mhz unit. If you put the base within
>5 feet of anything with a audio amp in it, you will hear the transmitter
>data through it. They should have done some real world testing.

Your units must have been VERY defective. The Lucent 9510 is the ONLY 900 MHz
digital phone out there that gets sidetone RIGHT - no echo, sounds like a
corded phone.

I also easily went 4000' with the phone and actually was able to go most of a
mile before the signal dropped completely. I'd say 4000' is probably the max
usable range, though.

I did notice that other devices tend to pick up the handset's data
transmissions, but that's more the fault of the other devices (e.g. If I key
up my HT ham radio it can cause devices to make strange noises, but that's not
my HT's fault...)

While reading article <33369F25.66A@bottom.com>, I noticed that
Len <email.address@bottom.com> said the following:
>My Toshiba FTH955 900 Mhz digital doesn't have any echo either although
>it does suffer from a few other audio distortions such as occassional
>background 'clicking'. Its also a bit quiet when transmitting.

There IS echo, but I won't argue that. The clicking is a standard (mis)feature
of VTech phones, of which I believe the Toshiba is an OEM model.

>What type of environment did you test the range in ... on open land with
>no obstructions or in town with houses & buildings blocking the line of
>site to your house? In town my Toshiba can only do 500 feet. I also
>tested a Escort Courier 9100 Spread Spectrum digital and it was good for
>about 700 feet. 4000 feet seems hard to believe.

Houses and buildings. For a more "fun" test, I live on a hill, and I was able
to go most of a mile downhill without losing the signal completely (though I
would say the usable limit was less.) Note though that this was NOT line of
sight, as other houses did block the direct signal path.

>Can you please give a few examples of these engineering problems?

Specifically there was a battery life problem where usable out of cradle time
was less than 24 hours and also another problem in which the handset would
report "Can't Find Base" about 25% of the time you pressed "phone."

------snip-------

When will RS get over this 10 bank thing? I mean their TOL home scanner has 1000 memories in 10 friggin' banks. Give me a break! And now a new handheld with 40 memories per bank.

Uniden has shown us how nice 20 banks can be. I really wish RS would catch on. It's just not practical tp have that many channels on one bank. And besides, who doesn't need more than 10 categories of frequencies? Wake up RS!

6518. Warranty for Canadian imported scanners

Newsgroup: rec.radio.scanner
Date: 1997-03-26 00:00:00 UTC
From: WinW <ufs00776@email.sjsu.edu>
Message-ID: <01bc399b$13adc280$59194182@default>
Source record: 202973

I was wondering if Icom scanners bought from Canada but shipped to the United States can be serviced free of charge (while still under warranty) by Icom America or does it need to be shipped back to Canada for Icom Canada to service. Scanners are being sold by dealers in Canada to customers in the United States but if those scanners need to shipped back to Icom Canada then it would be more troublesome and expensive because of shipping and customs charges. Responses appreciated.

I had the Ath-15 and the Ath-30......I would not give up my cheeper Cub
for both of them!They were junk....The letters wore off in a month, the
battery wouldn't hold a charge for long, and the cheep red film (or what
ever) in front of the LED's moved around.

My cub is better than both of them.

Like James, I was impressed with the Startek COE and sales folks at the
Dayton Ham fest.
They treated me well....of course they were taking my money....!

> environment.

I am not the one you were asking, but...

A couple of years ago I got an Escort 900 MHz DS/SS phone. I live in a
well popluated, suburban area and was able to get over 1000 feet range.

However as more and more spread spectrum and conventional 900 MHz radios
started pooping up I noticed my range begin to fall off. I now get
about 400 feet from the house. I only assume it is the increase in
other users that caused this.

On a side note regarding spread spectrum. Using several SS devices over
the last year I am convinced that freq hopping or hybrid spread sepctrun
is the only way to go on 900 MHz. Direct sequence cause more
interference with other user and seems to much less jam resistant than
manufacturers claim.

Regards

My "Dream Scanner" would have a video link to the cameras inside the police cruisers. And it would indeed scan my dreams when I was either asleep, or awake, to get the freq of that beautiful creature I'm dreaming of!

Your opinions on safety are sound but to write off the difference in travel times for a 30 mile trip are not realistic. It is easy to blow off 8.5 minutes as not making any difference but if you drive 50,000 miles a year as I do, that is over 235 hours difference. For those of us who get paid for our work and not just punching a clock the difference is very measurable. With billable time at 50 per hour, that "little" difference is nearly $12,000 per year. If my experience is any measure, I have 1,200,000

miles with no accidents and only 2 speeding tickets (I earned them both).
It is not speed that kills, it is those folks who drink, put on makeup,
eat, talk to back seat passengers, shave, chat on cell phone and discipline
kids who kill, in other words...not paying attention.

: Radio Shack has the PRO-60 on sale for $199 thru 3/29. Meanwhile, the PRO-62
: is on closeout for $169. Any strong opinions of one model over the other?

This is my opinion on the Pro-60:
Overall it's a good receiver. However these are some of complaints:
1. I don't like the 6 batt. pack, because it's adding more weight than necessary
If Uniden can do with 4, why can't GRE? Unless there is some technical
advantage that I am not aware of.
2. The Pro-60 is consuming power like elephants drinking water: a fresh pak of
Duracell batts only last for 3-4 days, and I am using the AC adapter most of
the time. The pro-51 batts lasted for weeks with the same usage.
3. The Pro-60 seems to be more susceptable to noise interference: use in my car
it picked up engine noise. The Pro-51 and Pro-26 are more immune to noise.
This is what I like about the Pro-60:
1. It has a very useful DIRECT button that allows me to enter frequency
directly before searching. Pro-51 and 26 don't have that feature.

>pushing the decimal key will drop the noise temperature of your scanner
>essentially giving you more range. This has its limits though....

Yea, but I heard it's different for the PRO-43. I heard you can lower the
noise figure and triple the frequency and effectively give yourself a radio
astronomy receiving station with more power than Aricibo! There was a trick
to it however. You have to climb the tower of a local TV broadcaster and get
as close as you can to the transmitting antennas. (if you can touch them,
that's great!) This increases your power 10 fold!

Seriously though, did somebody really ask for a mod to transmit on a scanner?
Were they a Radio Shack sales person?

This segment of the spectrum is reserved for point to point control station operations... no mobiles or ht's here. Most of what you hear now will be digital signals from paging system uplinks, but there is still a lot of voice control channels too.

Then it's *not* a digital phone!

>> I think the "digital" label on the phones is just a buzzword.

Be careful, a lot of phone boxes say "65,000 digital sercurity codes
to protect against unauthorized use of your phone" (or some such similar
statement). This refers *only* to the security codes used between the
phone and the handset to ensure that only your handset can initiate
calls from your base. It does not mean that the audio (conversation)
is digitally encoded. I've seen this on many analog phones as I was
browsing in my local electronics super store. Based on overheard
conversations, it was clear that customers and even store salespeople
were "taken in" by the box copy and incorrectly thought that the phones
were digital. It's pretty sleazy of phone manufacturers, but I'm sure
many of them are quite deliberately looking for ways to put the word
digital somewhere on their product boxes in order to cash in on the
popularity of digital. I'm sure they don't mind a bit if some folks
mistakenly buy their phone thinking it's digital when it's really not.

>> If you really want privacy, make sure it is spread spectrum.

Digital is enough to ensure privacy from all but the most sophisticated
eavesdroppers. Besides, your phone line from the base all the way
through your home and out to the telephone pole and down the street is
analog and is subject to being compromised too...

> You sure it wasn't an analog 900MHz phone? You shouldn't be able to
> "clearly" hear a digital phone on your scanner, unless you have a
> decoder on the scanner. Some of the "digital" phones I have been
> seeing lately are analog phones with a digital answering machine built
> in!

Yes, another "gotacha". People see the word digital somewhere on the
box or phone, and figure that the conversation is transmitted digitally.
In most cases I've seen, a digital answering machine is married to an
analog cordless phone. There are a few all digital models (from Tropez,
for example).

Biloxi doesn't have an airport.
If you meant Gulfport, Delta doesn't fly there.
If you meant Atlantic Southeast Airlines (a Delta feeder), they do allow
scanners at altitude.

The FAA's ruling on Portable Electronic Devices (FAR 91.21), the
official position of ASA and the statements of a number of other carriers

In all the aircraft I've ever flown in there was always a magazine put out by the airline and it was always in the pocket infront of the passenger. This publication is full of adverts and fluff but it also contains much overlooked but still usefull information on seat belts, oxygen masks, fire exits, and usually towards the end, in tiny print are the official rules of the airline. Most times the radio rules are written in plain English. I had a stewardess tell me that AM/FM radios were not allowed so I pointed to sentance in the book which allowed vhf scanners on a corporate basis then I explained that I was using a scanner instead of a "stereo". She was very polite about the whole thing and she actually seemed interested to learn. Please understand that I had already spoken to the pilot just after boarding and that the airline rules were only used because I didn't want to try to explain that I had already talked with the pilot. (Which I ended up explaining later anyway).

Please talk with the pilot first, then check the airline magazine rules pages for the low down.

Best of luck
JungleJim

6562. Kansas City 800mhz info here

Newsgroup: rec.radio.scanner

I bring my scanner along on my carry on, but wait till I am in the terminal to use it (after programming in all or the #s from www.airnav.com) Scanners are like cigarettes... don't use em on a plane unless it is legal, and even then *I* would rather you did it in the terminal away from me.

And if the captain asked me to take the batteries out of my watch before a CAT III approach at night in a snowstorm, I would!

Greetings,

I am interested in better monitoring an agency and I have only some of
their frequencies.

Here's what I know....

1) They use mostly UHF frequencies with repeaters.
2) They also use several unknown simplex frequencies.
3) They use Motorola Saber portables.

So, here are my questions....

Can I conclude that all of their frequencies are in the UHF range,
or can these radios also operate in other ranges, like VHF or 800's?

Also, can I assume they are operating in the clear, or can these
radios use any form of scrambling, or operate on trunked systems?

Thanks,
Jim

Echo might be there but I can't really notice it especially when I
compared the Toshiba against a Escort Courier 9100 which IMO had a BIG
echo problem. Toshiba is OEM VTech.

Amazing range! I'll have give one a try if I ever get the opportunity.
I have, however, noticed that 900 Mhz cordless phone owners seem to
report wide differences in range. Either the quality of the phones are
very inconsistent or certain (perhaps not readily obvious) environmental
factors have a significant impact on range.

> >Can you please give a few examples of these engineering problems?

I've heard that battery life is a somewhat common problem with the
higher power spread spectrum phones. Battery life (talk time & standby)
is excellent on my Toshiba.

900 MHz phones chew up battery power much more than the old 49 MHz
phones. I think if you have had your phone awhile, and it has
experienced many charges and recharges, installing a fresh battery pack
would bring the performance right back up there.

6575. R8500 Mods

Newsgroup: rec.radio.scanner
Date: 1997-03-27 00:00:00 UTC
From: jwa@tellabs.com
Message-ID: <5hehe0$6p4@tellnews.tellabs.com>
Source record: 202731

Operating the Icom R8500 in other contries.

If your traveling abroad and you want to re-program your R8500 to match
the version in that country. Use the table below.

Version | | | #03 | #05 | #02
Programming | | | | |
Resistor | AUS | DEN | EUR | FRA | USA
R516 | | | X | X |
R517 | | X | | X | X
R518 | X | | X | X | X
R455 | Z | Z | Z | Z |

X = populate the position with a 3.3k ohm 603 size surface mounted resistor
Z = populate the position with a 1k ohm 603 size surface mounted resistor

+-----------+--------------------------+
Version	Frequency Coverage (MHz)
	0.10000 - 823.99999
U.S.A	849.00001 - 869.99999
	894.00001 - 1999.99999
Europe	0.10000 - 1999.99999
Australia	
France	0.10000 - 87.50000
	108.00000 - 1999.99999
+-----------+--------------------------+

Remove the top cover and locate the main PC board (it's to the rear or the
chassis and holds the speech option, see the operators manual). R516, R517
and R518 is located in the right hand corner inside the small metal can.
There will be 4 adjacent resistor positions with 2 positions populated
(R517 & R518)the top position is unknown. The small metal can is located
on the right hand side of the main board. R455 is located below and to the
left of J12 (the speech module connector). R455 is also unpopulated and
it's to the left of R140.

If you can't find a 603 size surface mounted resistor, carefully unsolder
an exsisting resistor and re-populate it in another position. R455 can be
replaced with a zero Ohm resistor by shorting the position with a fine
stran of wire that was taken from a ribbon cable.

After the modification, the radio will lose it's memories and will require
reprogramming.

From: Robert Rodriguez <brodriguez@sosinc.net>
Message-ID: <01bc3aef$6911cbe0$LocalHost@brodriguez>
Source record: 202733

I am considering the purchase of a log-periodic antenna such as the Create 105-1300 Mhz sold through Radioware. Since I live about 80 miles from Denver, I would like to be able to pull in the multitude of signals that my current Radio Shack discone only receives with a very poor S/N ratio. My question is, should I orient this antenna vertically or horizontally? Most of the directional high-gain antennas I've seen are placed with the elements vertical. Does it really make a difference? Also, can anyone recommend a similar, more affordable antenna than the Create (which goes around $250) with either a PL-259 or N connector and similar frequency coverage? Thanks to anyone who can help.

LL>I will be buying this models for it's PL/CTCSS included. If you had
LL>ant experience with that scanner i would like to hear from you.

Great Scanner. About the only things that I don't like about it are 1)
No way to keep the keyboard/display light on for more than three
seconds, 2)You can search for frequency, but not tone, 3)It doesn't do
trunking, but then again the BC 235 won't do PL. I suppose a bigger
display would be nice, but it is a portable. Other than that, the radio
is great.

Your best bet would be to seach from 154.000 to 156.000. Most of your
public service agencies that operate on VHF high band can be heard
here. Yes, every now and then there are agencies that operate on
frequencies outside this segement, but I have found the most to be in
the 154 to 156 range. A particualry good VHF frequency used throughout
the country by nearly every police agnecy is the NLEEF (stands for
National Law Enforcement ??? Frequency), which is 155.475 MHz. This is
used as an interagency frequency allowing officers of different
departments usign different radio systems to communicate. This is
helpful in the the case of, lets say, a high speed pursuit that crossed
a county or state line. Units from the state police, the county
sheriff, the local police, and even the border patrol can coordinate
their efforts without having to relay through their individual
dispatchers. And, some departments that have gone to trunked systems in
the 800 MHz range often incorporate cross band repeater systems that
allow thier units to communicate with other departments units who are on
VHF.
Add 155.475 one to one of your memories and see what you hear!!

6584. List of sites for freq. lookups

6586. Need Advice on New Portable Transceiver and / or Radio Shack Scanner Mods

Newsgroup: rec.radio.scanner
Date: 1997-03-27 00:00:00 UTC
From: Peter Cheung <peter.cheung@bmts.com>
Message-ID: <01bc3a59$3c3778e0$9564bfcc@default>
Source record: 202742

Hello fellow scanner enthusiasts ...

This is my first time in the newsgroup and look forward
from learning from you people . I am a licensed pilot who attends airshows
and would love to be able to
listen in on the communications of the CAF Snowbirds, the USAF
Thunderbirds, the USN Blue Angels and the Northern Light Aerobatic Team . I
have no idea frequency range these teams operate at . Any leads on what are
the typical frequencies ? I presently own a Radio Shack Pro 37 scanner and
was wondering whether or not I can this unit can be modified for military
frequencies . I am thinking of purchasing a Radio Shack Pro 26 and was
wondering if that unit would be good for the aviation military frequencies
- without or with modifications .

Also, I would love to be able to be able to receive and
tranmit for CB and aircraft (108 - 136 Mhz) and recieve TV audio , AM /
FM signals and military aviation transmissions. I realize that I should
be looking for a portable transceiver that meets the minimum requirements
that I specified . A friend of mine just bought a
YAESU FT-50RH and I was wondering if such a unit could be modified .

Any suggestions on mods to be done or what transceiver to
purchase ?

Thanks a
heap .... TOP GUN j.glowacki@bmts.com

If the stations you wish to receive are vertical then you want to have
your LPDA vertical as well. It is important as cross polarization can
give you 20 dB of attenuation.

Before attempting to transmit, don't forget to turn the scanner off,
unplug the scanner, rotate the cord cap 180 degrees, plug it in and
turn it on again. Do this each time you switch between transmit and
receive. This will allow the speaker to act as a microphone as well as
reversing the direction of the electron movement from down the antenna
to up. This is top secret information - I hope the Feds don't see it!

A Steam Locomotive is a Beautiful Thing!

Does anyone know if there are any mods for this scanner? Thanx in advance!

6591. Help, need Xformer secondary CT voltage for Bearcat BC210-1

Newsgroup: rec.radio.scanner
Date: 1997-03-27 00:00:00 UTC
From: rstewart@infobahn.icubed.com
Message-ID: <X4CiA4kO8GA.151@news.icubed.com>
Source record: 202747

Help,

My Father's Bearcat BC210-1 gave up the ghost a few days ago, and he asked me to fix it. I have traced the problem to a open power transformer secondary winding. First thing to measure after checking the cord, etc. The transformer is always live in the circuit when the units plugged in (most likely to power the memory which stores the channels freq's). The rect. diode (2 - ie CT. Xformer) are good. I spent a few moments and traced the circuit, and I see that the DC from the rect. is filtered with caps as expected and supplied to pin 1 of a 7805 (+5V reg.). I think that the 12V DC input also goes to this 7805. Now since I know that the 7805 needs at least 3 volts headroom to properly regulate (ie reg. output in this case is 5V -hence 7805 plus the 3 volts = 8 volts. I also know that the max. input to the 7805 is in the neighborhood of 35 V). SO I have a range and would guess around 10V AC CT. But I don't want to damage the radio by guessing and thus end of buyong dad a new one. So what I'm looking for is the Telephone number for Electra Corp., A parts dist. for Electra Corp or Bearcat radios who can tell be what transformer is used and COD it to me, or Someone who has a schematic and can look for the Xformer's stated secondary voltge for me (current capacity would be nice as well, but with just the voltage I can measure the current capacity needed and guess based on the general Xformer's size) - my transformer is unreadable both with a meter and the label on the side. I have dad back in business with an old 12V DC regulated power supply borrowed from a mobile CB converted to a base unit. This works, but I want my supply back and dad says its a little more noisy (most likely lacks the filtering that's needed). Thanks for reading this message, and thanks in advance for any/all of your help. This is dad's only known hobby!

i have an ar300a and used the program that came with it and it works great.
i tried scanstar and it crashed on me. i call them for help while using the
demo
program and THEY WERE NO HELP AT ALL.. i guess they must of made enough
money now and don't care. it looked interesting butt thats about it..
scancat haven't been able to find a demo to look at...

good luck to u that have scanstar.....

anyone know of any others let me know ......

thanks

>by Icom America or does it need to be shipped back to Canada for Icom
>Canada to service.

Hello,

We are an ICOM dealer and regional service center and will service any ICOM commercial equipment regardless of when and where purchased, both in or out of warranty.

We will do this even for jerks who burn up our 800# trying to beat us up for the last dollar of profit, then buy from our competitors, then come back to us when the competitor ignores their phone calls needing support because there was no profit in the deal to cover that support.

ANY dealer should be willing to assume the same responsibility.

And you should not get yourself into situations where you cannot get support due to trying to pull a fast one. If you want to play games then be willing to put up with the consequences.

Even so, if your radio is broke, send it to us (UPS if possible) and we will make it right. We will put our $100K bench and $38/hour loaded labor cost technicians to work on your radio you bought somewhere else who can't support it for whatever reason.

We really appreciate it when our competitors give THEIR customers OUR 800# to support equipment they sold cheaper than we can afford to.

Make sure we have a UPS return address for you, a phone number and please give us a decent description of the problem we hopefully can reproduce. Include a dated bill of sale.

Problems due to not understanding or following instructions are not covered under warranty. We would like to bill these at a thousand dollars an hour.

You also can try to deal with ICOM directly 206-454-8155 in Washington State and see what they say. They also should be willing to service any of their stuff regardless of where purchased. They will first tell you to go to the dealer who sold you the thing, and after all your excuses why that's impossible maybe they will help. Maybe they won't. We will.

If you're going to play games purchasing out of the country you should allow something in your budget for dealing with problems as a result of that. Nevertheless, we will fix whatever it is you bought.

I just returned from Bogota, Colombia where I repaired about 40 receivers we didn't sell. And brought back eleven I couldn't fix in the jungle with earth, air, water and fire. Of course, we did sell over three hundred there in the last ten years, so the repairs are a service to the customer.

Holler if questions.

Message-ID: <5hd08n$v27@uwm.edu>
Source record: 202789

First, a big thank you to those who responded to my "for sale" post regarding the software.

Upon closer examination of the fine print in the license agreement, I believe it to be the case that despite my giving up total rights to use the program, (in effect, to get rid of the program) I must either send the materials back to Datafile or destroy the materials and send words to that effect back to the company, certifying the materials no longer exist.

I can certainly see the company's viewpoint on that issue. I just wanted to try not to have a total washout of my money, but live and learn.

I am in no way bashing Datafile; I think they produce an EXCELLENT product, and the help in trying to decide to buy beforehand from the author was commendable.

At this time and for my particular purpose, I felt Probe just wasn't for me...

Thanks again to all who responded.

Sincerely,

Jeff

6612. Re: bincancel:4 large binaries:AR1007:@@NCM

Newsgroup: rec.radio.scanner
Date: 1997-03-27 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-1007.a@redpoll.mrfs.oh.us>
Source record: 202797
Cross-posted to: alt.retromod,comp.databases.gupta,rec.arts.sf.starwars.misc,rec.radio.scanner,soc.culture.assyrian

Large binary posts do not belong in unmoderated discussion groups.

Please read this entire message, the Bincancel FAQ, and the complete
report (see below) before following up to or responding to this article.

As a service to, and with the cooperation of, other news administrators,
I run a program that searches for, and issues advisory cancels for,
large binaries in the akr, biz, comp, humanities, misc, news, nz, rec,
sci, soc, and talk hierarchies.

I have issued 4 cancels for large binary files (average size 218,164
characters - total size 872,656 characters) posted to 4 different
unmoderated discussion groups in the comp, rec, and soc hierarchies
as follows:
1 soc.culture.assyrian
1 rec.radio.scanner
1 rec.arts.sf.starwars.misc
1 comp.databases.gupta

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.usenet.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.bulletins. The
full report can also be found in news.lists.filters and alt.retromod.
Look for AR1007 in the subject, or, if your reader supports it,
use <URL:news:ARMM-Report-1007@redpoll.mrfs.oh.us>.

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated groups in the akr, biz, comp, humanities,
misc, news, rec, nz, sci, soc, and talk hierarchies
(except for comp.binaries.apple2, comp.bugs.2bsd, and
rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

For more information about binary cancels, see the bincancel FAQ,
<URL:http://www.southcom.com.au/~geniac/binfaq.txt>.

Please direct public feedback to news.admin.net-abuse.usenet and private
feedback to red@redpoll.mrfs.oh.us. In the interests of preventing
cross-posted flame wars, please honor the followup-to header and do
not cross-post your reply to multiple groups. Thank you for your
cooperation.

Best wishes,
Dick

I would appreciate any recommendations or suggestions for a VLF (150 KHz to 1 MHz) antenna for my scanner. I know that a lot of antennas claim to provide good coverage in this area, but I know they often don't do the job. Good performance in the 200 KHz to 500 KHz range is particularly desirable. Antenna can be for handheld or base, but it will be moved around and so it has to be fairly portable.

Thank you in advance for your input.

OK, but what about the squelch tail mods? I have been having problems lately with the broadcast being complete, but my Pro-51 stays on the channel, because what follows sounds just like it would if I had the squelch turned all the way down. I have heard this problem is addressable, but since you don't address it in your "Cure All - Quit asking Questions" post, I felt inclined to ask it.

Thanks buddy,
yo

The two freqs you say you didn't hear anything on are for University Hospital's Air Care (helicopter). It's not unusual to listen to these two freqs and hear nothing for long periods, because the choppers sometimes sit on stand-by for a while.

The CFD has at least four channels, the one you mentioned (460.600) is the one I listen to so I can figure out why the sirens are going off from the Fire Station about a block away. The others are essentially car (or truck?) to car. [I've heard traffic on these, but cannot, at this time, confirm that they are CFD: 458.250, 460.550, 460.625, 465.550, 465.600, and 465.625]

There are also those communities just across the Ohio River (Covington, Newport, Campbell County, and Kenton County - not to mention the Greater Cincinnati/Northern Kentucky International Airport), that are easily heard from high atop Price Hill, and are equally interesting.

And Cincinnati is spelled with one "T", thank-you.

Listening, but not telling,
yo

Scanner Buff! v3.90 has been released. Based on popular demand from
many dedicated users I have come back from the dead and released a new
version.

Scanner Buff! is the standard for data exchange and has been reviewed
with excellent marks by Monitoring Times and others.

Hope you enjoy the latest version. Version 4 - The Next Generation, is
being coded and will be released in a while.

Probably an old subject, but I'm new to this newsgroup.

Radio Shack has the PRO-60 on sale for $199 thru 3/29. Meanwhile, the PRO-62
is on closeout for $169. Any strong opinions of one model over the other?

This unit works well if you do two things.
1)Find the freq. spot on your radio and use a dab of super glue on the thumbwheel of the sf100. It will stabilize the drift.
2)Use a digital tuning radio. Analog radios always drift.
I use the sf100 for various other things like cd player, tuning in in the house while listening to it while working on the car outside...etc...
good luck. You would be better off buying a cd-cassette adapter if you have a tape player in your car......works best!

All I did was to tell people to BE CAREFULL!
I Would be HAPPY if you were not a crook!
and I would be HAPPY to post a PUBLIC APPOLOGY IF
you prove to not be a crook! Tell us something
solid! Tell us something trace-able! You wont even
give someone your real phone number, or real address

or real email account, or ANY transaction means than
CASH UP FRONT... Geez, only a dummy would trade with
you knowing all of that. Why do you refuse to give
a little more info?

BUT SO FAR, I have recieved numorous messages from
many that have dealt with you and NONE can as of yet
give me anything solid, in fact several are frantic
and have already contacted authorities!

I feel like I know what your up to, AND IT AINT GOOD!
I can't sit by and watch, I have been scammed on the
internet before and it's not a good feeling.
There is NOTHING WRONG with being carefull.

Tell us why we should trust you!
Where is the Beef!??

Do you really have for sale:
a $700 bike
$700 basketball tickets
$1000 basketball tickets
$300 NAD stereo
Macintosh computer
Amiga computer
video toaster
Radio shack scanners
Microsoft Office
ANDMANY other items placed for sale
cash up front only on the internet???

Would you think a legit trader would
post through Deja News instead of a normal traceable was?
Would you think a legit trader would
post using a EMAIL free mailbox (rocketmail) which was obtained
using another free mailbox (Hotmail) both very hard to trace?
Would you think a legit trader would
use a POST OFFICE mail forwarding service like
HELP U MAIL instead of a real traceable address?
Would you think a legit trader would
give a REAL phone number?

Sorry Patrick (if thats your real name) it still
looks VERY BAD to me.

Give me a call if you wish, 713-626-7627
if your afraid for some reason to give info on the
internet I would be happy to discuss your problems.

Eddie

Ha. I bought one, for the same purpose. It was pretty crappy. Might
have been a different (lower cost?) model, get one at someplace with a
liberal return policy. Try it and see.

>scanner gives off and compare that to a laptop computer!!!

I operate all kinds of stuff while flying my airplane. BUT I CAN TURN IT OFF WHEN IT CAUSES PROBLEMS! How the can a flight attendant ask you to do the same if nobody knows you're using your electronic toy?

Speaking as an electrical engineer, and as a private pilot, I'll be the first to say that most electronic toys (yes, I mean your scanner too) are perfectly safe. There are a few, however, which DO cause problems. Rather than put the burden of safety on some flight attendant who doesn't know what EMI is, they made the law I cited in an earlier post. That's reasonable. They don't know who you are, and they can't know whether that thing you claim is safe is truly ok.

Want an example of something which did cause interference? One particular model of hand held GPS receiver made by Magellan! It trashed both ILS receivers on board an aircraft which was fortunately in VMC at the time.

Sure, the device met part 15. So what? That's not gonna save your ass if you're using one of those devices covertly while while the pilots are trying to take you down a glide slope at 150 knots in 0-0 weather for a CAT II approach.

By the way, if you don't know what 0-0 weather is or what a CAT II approach is, then I rest my case. But even if you understand what I'm talking about, you don't know whether that doo-dad you own could cause problems or not. Aircraft avionics stacks are carefully certified to work simultaneously with no interference problems. Your scanner was not part of the picture.

Yes, you could use a spectrum analyzer to figure out if the device is a problem. That's nice for design work. But not everyone has a shop with that sort of equipment. Even if they did, how would a flight attendant know that you really tested the device and that you did it correctly?

Laws are written for everyone, even you Mr. Moran. This law exists for good reason. Your attitude and behavior isn't just illegal, it's dangerous.

Good luck! I tried using online tracking with a 2nd day UPS shipment. Their delivery guy had already been to the house and left the yellow note but their World Wide Web tracking didn't even show
that the package had arrived in Georgia much less the Atlanta area. What a joke $16+ for 2nd day COD that I couldn't pick up until the following Monday.

Fedex, on the other hand actually *called* on the phone to tell me that a package would be delivered the next day and exactly how much it would be.

Wonder who is getting my business?

All,
Someone here asked last week if anyone could confirm the rumor that Motorola has sued Uniden to block the release of the TrunkTracker. The answer is no! At least, not yet.
I called Motorola's press relations folks yesterday and asked. They called back this morning and said "we are aware of the (Uniden) radio, and we are studying our options at this time. We have no further comment."
I then asked if she was clearly stating that no lawsuit has been filed. She said none has been filed.
As an aside, Harold Ort, editor of Popular Communications magazine, told me yesterday that he spoke with Jill Prince, Uniden's media and trade show director on Monday, and she told him then that the first shipments of production model 235XLTs are expected either late this week, or early next week.
Of course, samples will have to be tested for quality control and such, so it will probably take another week or two to actually get them to the dealers.

John

> 447.00 - 450.00 442.00 - 445.00
There is a much easier way to figure this out. The 2 meter repeater
inputs/outputs are always separated by 600Khz. The outputs that are below
146.00Mhz have a negative offset, and above 146Mhz have a positive offset.
For example, output of 146.76 has an input of 146.16. Output of 147.21 has
an input of 147.81. The 70cm band has a 5Mhz offset, ie: 444.100 output has
an input of 449.100Mhz.

Does anyone know what type of connector the Diamond Discone D-130J uses? I received my antenna yesterday and the warning label said:
'Attempted connection of a PL-259 (UHF) cable connector can damage the antenna connector.'

If I cannot use a PL-259 connector (which I already have) then what type of connector should I use?

Well, thanks For Your Time. Please reply to:

ubc9000xlt@aol.com with the answer. Thank You

I've tried to scan my Tropez 900DX, and came up empty. I recently picked up a 900NDX--but did not bother trying to scan it yet. I'm curious, which model Tropez were you able to intercept?

It might come as a surprise to some, but not all of Tropez 900 MHz phones are digital. My parents really liked my 900DX and went phone shopping. When they proudly showed me their new Tropez--it was a 900ADL. I didn't have the heart to tell them that they just bought an analog phone.

> However, it seemed to be the result of interference with an adjacent

> conversations from that phone. (Unlike the neighbors' 49 MHz analog
> phones. :-)

Hey, maybe your wife was calling one of your neighbors on their analog cordless phones. That could explain how you were intercepting your wife's call :-)

> I've also heard parts of (apparently) cellular phone conversations
> while in traffic. I think that also may be the result of local signals
> interfering, and I think the transmitter was very close to me.

Digital is relatively new in the world of cellular (at least in the US). Most cellular out there is still analog and so it's no surprise you've been picking up cellular calls.

Got to Q's

Q1
How come my UBC3000XLT find freg's in the range 430 - 438 when my IC R10 dosen't. Is it the socalled images ?
Which one is the bad guy

Q2
In my logbook i have this "old" Q from when i first got my r10. When the 3000xlt is set on freq. 418.4 NFM og my ICOM is scanning over 399.9999 -> 400.0000 NFM The the Uniden is activated !!!!

If i go Up then i get sounds like a transmission was end and then nothing
If i go Down it sounds like ctcss tone encode signals
At 400 mhz on r10 it gives just endless white noise in the uniden

Q3
When the Uniden is located on 418,4 Mhz and i scan with the R10 using 0.10 kHz steps then i get the uniden activated on every step on the third decimal -- that is whenever the ICOM is going .005 up or down.

Q4
When i power the R10 on it activates the Uniden as thoug it was a transmitter ? The noise is different on diff. places in the band.
When they bot are set on 418.4 they don't trigger the squelsh
Hmm....

BTW i can also scan my computer keyboard and mouse :)

Please give me some plausible explanation on what goes and tell me which one to get rid off.

Best regards

I had the same issue. Besides the notice, the connector is very snug, so
you think that it's not a PL-259 (possibly an "N"). It really is
PL-259. Push hard and you should be able to screw it down.

Regards,

Harold

> (118-136?). Thanks fo' 'da help.The 118-136 range would be for airport operations, like takeoff, landing
and heading. Once they get off the ground check your local media
frequencies or traffic report frequencies or if it is a medical transport
check out those frequencies. Depending on the area, the frequencies will
be different. If it is strictly a business helicopter it may operate in
several ranges. Check your local listings, you'll find them.

6673. L.A. Area - Media Frequencys

Newsgroup: rec.radio.scanner
Date: 1997-03-28 00:00:00 UTC
From: Jon & Sarah <jsevers@sure.net>
Message-ID: <333C4FFF.21F8@sure.net>
Source record: 202604

What are some good frequencys in Los Angeles area to monitor for newsmedia activity ? Not really interested in "Live Feeds" but more a type of dispatch channel for the different media units to respond to different incidents around L.A.

Both ground and air units.

Thanks...Jon

Why would you want to use rg6 which has a 75 ohm impedence versus 9913
which has a 50ohm impedence. For short runs I would use rg8m from radio
shack, long runs 9913 is the way to go, but I would get the superflex
9913 ie (stranded center conductor) and for really low loss, I would
use 1/2 inch hardline!!!

Although I like the above response better, it is actually
Drug Abuse Resistance Education. That is a nationwide program
to educate students to avoid drug use and other unhealthy behavior.

Well, I had the same problem with mine, both the one with the antenna
and the one with the cigarette lighter plug. I thought that since I
wanted my system to look stock, and I couldn't afford to get a changer
yet for my '91 Explorer, I would just use my discman. Unfortunately,
Ford's premium sound system's cassette head unit has a bad tape head,
so I chose this. After a while, I went back to the car cassette
adapter, and I just use a LOT of patience so that I can get CD in all
speakers, not just the right.

Vertical, All of the signals your shooting for are vertical. And yes
it makes a VERY big differance, 20 Db worth. Theres a guy that lives up
the street (7 Miles) if I work him on 6 meters crosspolarized he is
about S3 if we run in the same plane he is 30 Db over S9. BTW, you'll
like that antenna, its built with the heaviest guage alum I've ever seen
in an antenna....73

>for example).

I have a Tropez digital, and I did hear a conversation while my wife was using it. However, it seemed to be the result of interference with an adjacent signal, and wasn't very clear. It was late, so I didn't make a note of the frequency I was tuned to. Under normal use, I cannot receive conversations from that phone. (Unlike the neighbors' 49 MHz analog phones. :-)

I've also heard parts of (apparently) cellular phone conversations while in traffic. I think that also may be the result of local signals interfering, and I think the transmitter was very close to me.

I had a RS discone on the roof(35') of my last building and I was getting
some from highrise apartment building 1 mile away (I like when they call
for a pizza, because then you get a location) But for homes the range is
less. The apt building user was facing me location and was higher. With
houses they are low and have all sorts of RF crap around, like power lines
transformers, trees will block some freqs. But I've also heard cordless
from 1000 miles away during good skip conditions...

> Thanks, Ken

I'm sure that it's possible, but I suspect that it would not be worth the cost. The primary difference between the two is in the auto store/memory functions and if that is all you want to upgrade then it hardly seems worthwhile.

If you want to replace the the board to get cellular, you can order one from an overseas supplier such as Javiation (www.demon.uk.co/~javiation). Not sure what the cost would be.

The other alternative, if it is cellular that you are after, would be to install the Optoelectronics OS535 and with software such as Probe, and "unlock" the OS to receive cellular. The OS is widely available, including from Optoelectronics (www.optoelectronics.com). Not sure what it is selling for these days. It was on sale for a while for $200, and it still may be. Otherwise, it's $300.

You can also buy the same board from an overseas seller and not bother with obtaining the unlock code, but there's not much advantage to that approach. That's what I did before the unlock code became widely available. There is a small advantage in that the overseas board can be used with any software regardless of whether it is capable of unlocking the OS (not all scanning software enables you to unlock the OS).

The scanner must be interfaced to a PC in order to tune cellular. The biggest advantage is that you have computer control and that would virtually eliminate any drawbacks that you currently may find with a 2035.

What is the exact frequencies marked, as in the Ottawa area ther were
some RCMP surplus WT sold a year or so ago, but most were the old 155.67,
155.76 etc.. that the RCMP use to use. They are now on the 410-415 range.
The RCMP units were motorola units that had the entire freq. synthesizer
chip removed. The replacement is several $ hundreds from Motorola. If
the radios are intact, then you aren't keying a repeater. You'll need
to have the CTCSS (PL) code to do that. Fire up one of the units and
use a scanner and search to see if the radio is transmitting. Some
radios had a simplex channel as one of the channels, so that may be
the only one that will recieve. The repeater always have an input
frequency and an output frequency. BTW there is really no point in
buying surplus radios, as you can't legally transmit with them. The
surplus radios I've seen are normally a narrow spectrum like 420-425
Mhz. They are not 400-800, so not only will you need "crystals' but
you will also need to change various coils and other components. The
only freqs around 450 is the HAM 70cm band (430-450 mhz)

I wouldn't be foolish enough to send anyone I didn't know a check, tell him to ship it UPS-COD!

The situation is similar to the cellular/cordless phone monitoring
flap. You can have a scanner that receives the frequencies, but you
can't listen to them. You can record traffic from your scanner, but
you can't play them back FOR ANYONE ELSE.

That's the federal law in a nutshell.

There are ordinances and statutes in some jurisdictions that are more
restrictive, but unenforceable unless someone complains. So, if you
want to record scanner audio for time-shifting purposes so you can
listen to it yourself, just keep a low profile about it.

From: ealafita@aol.com
Message-ID: <19970328184100.NAA09322@ladder01.news.aol.com>
Source record: 202658

Fellow newsgroupers to whom this individual has posted,

I and others on the NG's have been doing business with a Patrick Walker <patwalk@rocketmail.com, patwalk@hotmail.com> and would like to obtain traceable information on him (true address, phone,...) to ensure he may be held accountable. In the last week he has posted about 20 wanted ads on a variety of newsgroup marketplaces (everything from NCAA Final Four tickets, computer parts/software, bike, Star Wars action figures, etc.) and has responded to WTB ads (like mine). He asks only that money orders (no COD - no more lectures, please, I already know!) be sent to a mail forwarding service in Reno, NV (he may be in either the Portland, OR or Las Vegas area) and has offered no obvious information which leads to his whereabouts or confirms he is who he claims to be (apparently, he provided rocketmail with a hotmail address as his permanent). Myself and many others who have corresponded with him have been given nothing to allay our suspicions and only more reason to be wary (very reasonable requests for information on himself and what he's buying are met only with rants on how he's being victimized). For more background, read below and try Altavista, Dejanews, etc. searches on his email address. One gentleman who works with hotmail was good enough to offer the following ID numbers from analyzing the headers of the messages I had sent him. Because none involved hotmail he did not pursue further, but there is apparently a clue here (these don't match the numbers I see in patwalk's headers). Any help would be greatly appreciated. Eric

All I did was to tell people to BE CAREFULL!
I Would be HAPPY if you were not a crook!
and I would be HAPPY to post a PUBLIC APPOLOGY IF
you prove to not be a crook! Tell us something
solid! Tell us something trace-able! You wont even
give someone your real phone number, or real address
or real email account, or ANY transaction means than
CASH UP FRONT... Geez, only a dummy would trade with
you knowing all of that. Why do you refuse to give
a little more info?
BUT SO FAR, I have recieved numorous messages from
many that have dealt with you and NONE can as of yet
give me anything solid, in fact several are frantic
and have already contacted authorities!
I feel like I know what your up to, AND IT AINT GOOD!
I can't sit by and watch, I have been scammed on the
internet before and it's not a good feeling.
There is NOTHING WRONG with being carefull.
Tell us why we should trust you!
Where is the Beef!??
Do you really have for sale:
a $700 bike
$700 basketball tickets
$1000 basketball tickets
$300 NAD stereo
Macintosh computer
Amiga computer
video toaster
Radio shack scanners
Microsoft Office
ANDMANY other items placed for sale
cash up front only on the internet???
Would you think a legit trader would
post through Deja News instead of a normal traceable was?
Would you think a legit trader would
post using a EMAIL free mailbox (rocketmail) which was obtained
using another free mailbox (Hotmail) both very hard to trace?
Would you think a legit trader would
use a POST OFFICE mail forwarding service like
HELP U MAIL instead of a real traceable address?
Would you think a legit trader would
give a REAL phone number?
Sorry Patrick (if thats your real name) it still

looks VERY BAD to me.
Give me a call if you wish, 713-626-7627
if your afraid for some reason to give info on the
internet I would be happy to discuss your problems.
Eddie

> Contact me at terryh2@airmail.net

There's a dfw and other freqs listing at
http://www2.cy-net.net/~kg5ai/freqs/freqs.html

Pls post if you find any good freqs.

My personal quest these days is trying to find the freq[s]
Harwood-Pacific (the building management company in dallas) uses. The
building I'm particularly interested in is the Texas Commerce Bank
tower in Richardson where I office.

I went to the office and inspected their portables; they're Motorola
p110 units. The lady said they can hit downtown Dallas with them (a
few miles away) so I believe they're hitting a repeater in Dallas or
Richardson. There were no indications of freqs anywhere on the units.

I looked up the specs for the p110 and it's shipped to cover freqs in
these bands:

136-162
146-175
438-470
465-495
490-520

:-o

So I brought my porto-scanner to work and scanned each of these bands
with the antenna off the unit (figuring the in-building TX would be
strong enough to come through).

I did this for two days and no hits... (I would recognize the voices
of the staff at the building here).

Does anyone have hints as to a better methodology for finding these
freqs? I don't have the $$$ for a freq counter at the moment...

Maybe someone has a cd-rom they could search for me? I think I've
done a pretty good job of doing the homework so far... :)

He did mention that he was a pilot. He did not mention the purpose
he had in mind for the transmit feature, but being that he didn't
mention that he wanted Xmit for the military frequencies does kind
of suggest that his planned purpose is legit... although, that does
not make it legal to use a transmitter which is not FCC approved for
use on those frequencies (except in an emergency.)

6711. Portland OR area freqs. to trade?

Newsgroup: rec.radio.scanner
Date: 1997-03-28 00:00:00 UTC
From: Tom Greenli <tgreenli@vr-net.com>
Message-ID: <01bc3ba4$46277e80$LocalHost@home-133>
Source record: 202662
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I live on the west side of Portland OR (Aloha/Beaverton).
I was wondering if anyone has frequency's they would
like to trade. I can reply with MS Word MS Excel or
just plane ASCII. My list is small but growing every day.
I have a computer controlled 2006 that I set up on search
missions all the time. I also have the FCC database for the
area, but that takes a bit of weeding out to see if I can get
these or not. That's why I would like to hook up with people
who have monitored this area that would like to trade freqs.

Thanks,
Tom

: Don, get thee to a local Radio Shack and pick up a copy of "Police
: Call." You should be able to find all the frequencies you need to fill

And when you do pick up that copy of "Police Call", lookup that large
suburban area that's 20 miles away, punch in the frequencies and see
what you can pick up. Even with a scanner sitting on your desk with it's
built-in whip, you just might be amazed at what you can hear.

The audio from the shootout was played on local
broadcast radio stations here in Los Angeles area,
therefore, one could claim that the tape was made from
there (Or TV where i believe it also aired.)

I'd love to hear the wav file... plst it.

Before becoming paranoid and accusing people of being dishonest, it might be useful to learn something about how the Internet works.

Most anyone who is using a dialup ISP and does not have a domain name of their own will probably have a different IP address each and every time they log on. There is nothing "fishy" about this; it's just the way things are. The numbers starting with 206.163.12 above all belong to one ISP and the suffixes are dynamically assigned by their server when a customer dials in. The same is probably true of the other numbers, although they might belong to different ISPs. I know a lot of honest, reliable, trustworthy people who have accounts with multiple ISPs because no single ISP is reliable enough.

Jim,
If your going to a NASCAR race... get the muff type headphones, they are WORTH
the money.
If you are going to a NASCAR race and are sitting in the cheap seats (those in
front) get the muff type hearing protectors even if you are not taking your
scanner.
You can find the headphones on the WWW at (you'll have to look this up) Frank's
scanners or some suce, might also try racing radios. You can also buy them at
the track, and from what I saw at MIS last year, they are not any more
expensive. The cheaper sets go for about $30 and then go up from there.
Buy yourself a set, or you may as well leave the scanner at home, you won't be
able to hear it anyhow..

6735. PRO-26 questions

Newsgroup: rec.radio.scanner
Date: 1997-03-28 00:00:00 UTC
From: Ray Bloom <bloom@intermetrics.com>
Message-ID: <333B36BA.6D2B@intermetrics.com>
Source record: 202757

With PRO-26s currently $100 off at RadShack (thru this Saturday), I am considering "upgrading" my recently-purchased PRO-60 to a 26.

However, after looking at one, and its manual, in the store today, I have some questions.

The primary concern I have is that, unlike the PRO-60, there doesn't appear
to be any way to directly enter a frequency. On the 60, it's PGM (MANUAL
also works), {frequency}, DIRECT. Does anyone know how to do this on the 26?
There's no DIRECT button.

Related to this, the 26 manual says you must begin a direct search by selecting the channel that's set to the frequency you want to search from.
Since this is a truly *stupid* requirement, I tried a direct entry, which
worked (and should have solved my problem, above, but the scanner begins searching immediately). I believe what I did (I don't have the 26 to try to duplicate it) was to press MANUAL, {frequency}, then UP or DOWN ARROW.

Next ... I noticed that the 26's display seems sloppy as compared to the 60. That is, on the 60, the active banks blink in sequence as they're scanned and the channel numbers can (just) be seen to increment smoothly.
On the 26, only some of the selected banks seem to blink, and then only irregularly. Also, the channel numbers are, well ..., sloppy, too.
I noticed, for example, when just scanning banks 1 and 2 only (none of the
channels were programmed), often the tens digit never seemed to go beyond
"1". Perhaps this is related to the scan speed and either the frequency in which the LCD panel is updated, or, perhaps the panel itself can't keep
up. I don't know. Does anyone?

I presume that the "H/S" stands for hyperscan (at least that's the implication from RadShack Faxback Doc. # 15614 ("Hints and Tips"). But what the heck does "S/S" stand for? I couldn't find it in the manual ... I'm guessing "Search Skip".

Another one ... the manual says that Data Skip works in both limit searches

and direct searches. Does anyone know if it works during regular scanning?
It would be nice I didn't have to changes lock-outs manually as trunking systems switch their data channels from day to day.

Let's see... I find it puzzling that the manual lists the 11 NOAA weather
channels in the back, but in the front indicates that the scanner only searches the 8 in the 162.400-162.550 range.

Lastly, 'cause I can't think of anything else ;-), I notice that the 26 skips two 2MHz segments that the 60 covers: 849-851MHz and 894-896MHz. What's up with that??

The idea is to pay attention and the stops will not need to be sudden. The
concept of speed is not how fast you go but how you go fast.

While scanning the bank you want to see hit the manual key and you can =
step through the channels by pressing it again and again. Or you can =
press manual then type in the number of any channel you want to see and =
press manual again. Is that what you were looking for?

6743. Discone Antenna vs. Pre-Amp

Newsgroup: rec.radio.scanner
Date: 1997-03-28 00:00:00 UTC
From: hipcs@aol.com
Message-ID: <19970328052900.AAA06273@ladder01.news.aol.com>
Source record: 202765

Here's some antenna / gain questions for those who might be able to help me:

I have a Discone antenna mounted at the top of a 40' tv tower. I have 50' of good quality RG-8 cable with a BNC adapter on the scanner end to plug into my PRO-46 scanner.

When I originally bought the discone I was very disappointed with the results below 50MHz --- my $9.99 radio shack "center-loaded telescoping whip antenna" (#20-006) attached straight to the scanner was better than the discone mounted 40' in the air. So I read about a "trick" where you take the $9.99 whip antenna and mount it to the bolt on the top of the discone antenna on the tower. I did that and surprise surprise it made a big difference in my reception of lower frequencies. (In defense of the discone, I did see a big difference in the 150+ and 400+ ranges even without the add-on whip antenna).

My question now is that lately I have been reading up on pre-amps to try to pull in even weaker signals in all frequencies and especially below 50MHz and am a bit confused about pre-amps on a discone. I read that discone antennas don't have any "gain" - so does that mean a pre-amp would be extremely useful or extremely pointless with a discone? And how about the extra antenna I added on top of the discone? Would a pre-amp make it more effective?

Are there any pre-amps that are suggested for my setup and are in the $50-$100 range?

Also, I have a regular VHF/UHF/FM antenna and a rotor with a TV pre-amp on this same 40' tower - would I be just as well off using the TV antenna signal for my scanner thus having both gain and the ability to "point" the antenna?

Thanks very much,

Jonathan Stanley

6745. Legal question about scanner tape recording

Newsgroup: rec.radio.scanner
Date: 1997-03-28 00:00:00 UTC
From: hipcs@aol.com
Message-ID: <19970328063401.BAA10158@ladder01.news.aol.com>
Source record: 202767

Hypothetical:

I like to record air traffic frequencies at night while I'm asleep onto a voice activated tape recorder. I can then play back 6 hours worth of information in just a few minutes. I've also used the tape recorder to try to help me find new frequencies by locking the scanner into a narrow search mode and then playing back the tape to see if anything useful was found.

Recently a "concerned" person advised me that while it is fine and legal to *listen* to a scanner, it is illegal to *record* anything coming from one. I then turned to the newsgroups and found one message stating that there is no Federal / FCC law against recording from a scanner, but states and counties may have their own laws prohibiting tape recording from a scanner.

My questions are: Is it true that there is no Federal / FCC law making it illegal, and how would I find out what the state (Florida) and county (Marion) laws are on the matter?

Interestingly, when I bought the voice activated tape recorder from Radio Shack a while back, I told the salesman what I wanted it for and he knew exactly what to recommend and didn't mention anything about it being illegal. But calling radio shack a couple days ago and asking "is recording from a scanner legal" the answer was "no - it is illegal."

Curious,

Jonathan Stanley

If they are news or traffic, helicopters, try searching 450 to 451
MHZ.

The police helicopters can crop up just about anywhere, at least they
do in the SF Bay area.

If they are black helicopters, try the standard NATO frequencies.

1. It is no longer legal to manufactuer scanners that can receive the "Rip off Band".

2. If your scanner can be modified to do so, go for it, it is not illegal to modify, only to listen, no mater what the fed jerks say (I would like to see this one stand a chance in court). Please do not let the government scare you with false statements. They will deny all they say later.

3. I have not seen the Scanner Frequency Reception Police in my area yet, has anyone else ?

4. If you are smart you will not tell just anyone what your listening to no mater what you hear.

The in-flight magazines of most airlines explicit say what electronic devices are and are not allowed in flight, although the captain has the last say.

Most airlines prohibit radio receivers or, specifically, VHF receivers or scanners. Not all do, however. At one time, Delta specifically permitted
VHF scanners at altitudes of 10,000 ft and above.

I suspect that the more modern the aircraft is, the more conservative the flight crew will be.

In the past it was customary for some airlines to put the pilot/ATC conversations on a cabin audio channel of aircraft that had them. American
stopped this practice several years ago, and I have not been on a carrier recently that was still doing it.

Yah I know a guy that bought some radios like that at a flemarket,
turned out that the police dep. that they were from, pulled out some of
the major components before selling them as junk. So that's all they
are JUNK! Don't wast your time and money on stuff like this.

The last thing in the world the cops or anyone for that matter is
going to do is leave their crystals inside, just think if some dink
getting hold of their old radios and starting to TX on their radio
frequency!

Trunking talkgroup IDs are not issued by the FCC. They are set up by
whoever installs and maintains the system.

>Which one is the bad guy

Sounds like birdies. Does it happen when you have a rubber duckie on it? If it does, try finding one, and stop there. Then disconnect the antenna and put an external antenna on and see if you still have it. A birdie is a signal generated by the internal workings of the scanner and is generally unwanted. Besides an external antenna, there's nothing you can do about a birdie.

Sounds like your one scanner is hearing the IF or LO of the other. I used to be able to "jam" my mom's kitchen radio by tuning the upstairs radio to the right place. the LO from the upstairs radio was overpowering the station she was trying to pick up downstairs.

IF= intermediate frequency
LO= local oscillator

>
>Q3

Well, if there is anyone NOT to ask, it is a Rat Shack employee. They
wouldn't know if you are talking about a computer scanner or a radio scanner.

I think it is legal just so long as you don't tell anyone what you hear on the
tape recording. (cell phones aren't legal of course) BUT, catch me
listening. I dare you.

The AR3000 is an excellent scanner, far better than my 8K, but it does have a plastic case.. ..in my view a poor effort in a scanner in that price range. However, ther is a fix; because of its otherwise excellent quality, it is the ideal candidate for some kind of screening, nickel paint, metal spray, I'm sure you know the sort of thing. Along with some other precautions, this will help. Be careful you don't ground anything you shouln't and don't attempt it if you're not used to pulling circuit boards out things.

Regards,

Joe

Hello,

I have a Phillips DC777 in-dash am/fm/shortwave radio and
cassette player for sale. It's in good condition, but has been installed
in two different cars and repaired once (to fix the infamous cold-solder
joint in the display).

Asking $300, which includes insured shipping to you.

>And just what are you threatening you little pissant? You better behave
>yourself or I'll spank you. Now run along and stick that ferret like nose
>of yours in places that actually concern you.

For crying out loud, Michael! Do you HAVE to antagonize each and every user here on the newsgroup. A year or so ago you abused me for hazarding an opinion as to the value of an Icom R-7000 (I agreed that $1,000) was a fair price at the time). Rather than accept the fact that other users can have opinions that differ from your own, you vilified me as ignorant and deceitful. Now, I find that you have turned your puerile venom on someone else who said something you didn't agree with. If it weren't for these personal attacks I don't think we'd hear from you at all! Please, try and confine your observations to something of interest to the group as a whole. Ad hominem attacks don't fit that profile.

Check around. I know that with some disk changers, an FM modulator is
included which is NOT analog (drifty) tuning. I think they work by
crystal, since they usually have one or two frequencies with a switch.
Or, check out a PLL (see alt.radio.pirate) if money is NO object
(although a radio with AUX input would be cheaper than anything for
pirates).

I tried the SF, and the sound is excellent, but the drift makes it
virtually useless.

6780. FS: Bearcat BCT-10 $134

Newsgroup: rec.radio.scanner
Date: 1997-03-29 00:00:00 UTC
From: gtseng@wgn.net
Message-ID: <gtseng-2903972133400001@38.227.110.2>
Source record: 202502

Had it for a few months, but seldom used as I live so close to work that
all the driving I do is local.

Preprogrammed and works in all 50 states!

$134 (firm) +shipping.

--George

Bearcat BCT-10 Highway Information System

"The World's Smallest Mobile Scanning System from Uniden Bearcat."

* Highway Patrol alert with strength meter
* Highway patrol coverage
* Local police coverage
* Pre-programmed scanner covers all 50 states plus Canada
* 9 level strength meter
* Instant weather
* Built-in speaker
* External speaker jack
* Channel lockout
* Memory backup
* Hold Key
* Windshield mountable

The BearTracker is a sophisticated highway alarm system that responds to
radio waves emitted from special secondary transmitters installed on
most highway patrol vehicles across the U.S. The BCT-10 alarm system
informs you both visually and audibly when activity is detected. It also
determines signal strength to inform you of the presence and distance of
highway patrol vehicles even if they're not using radar!
Features

2 Digit/State LED Display with Pre-Programmed Frequencies -The BCT-10
comes equipped with 866 pre-programmed frequencies which includes all 50
states and Canadian provinces. Just set the BCT-10 for your state and
go, the scanner does the rest.

LED Numerical Signal Strength Meter -This lighting fast technology
gives you an accurate indication of strength and distance of radio
transmissions.

Multiple Coverage -Helps protect you against all forms of speed
measurement including Radar, VASCAR, Airplane, Clocking and Laser.

Instant Weather ?-?Automatically scans all NOAA weather channels and two Canadian Coast Guard channels.

Channel Lockout ?-?This feature allows you to skip channels you don't want to hear.

High Gain 360 Rubber Antenna ?-?The BCT-10 uses a highly sensitive antenna to receive radio signals. Adjustable for any mounting situation.

Built-in Speaker ?-?Allows you to monitor law enforcement two-way radio transmissions.

External Speaker Jack ?-?An external speaker jack allow you to add-on a external speaker.

Built-in Scan Delay ?-?An automatic 2 second delay that allows time for reply on the same channel before resuming to scan.

Mute ?-?While warning alarm is sounding, press mute to mute the warning alarms for the duration of warning (until warning LED turns off.) The mute is automatically reset when warning LED turns off.

Memory Backup ?-?The BCT-10 comes with a permamant memory back-up system that remembers your state selection, frequency selections and deletions when you power off the unit.

Hold Key ?-?When the scanning stops on an active frequency, press this key to stay on that frequency. The warning function is disabled in the hold mode. Press this key again to go back to scanning.

Accessories ?-?The BCT-10 includes a "Quick-Clip Release" dual suction windshield mount, visor mounting bracket, cigarette lighter adaptor plug, hard-wired power cord and DC power cord.

One trick I used is mounting a RS Discone antenna on a 5 foot length of
PVC pipe and then putting that into a Christmas tree stand. This let me
have a good antenna that I could move out onto the balcony when I was
scanning but bring inside when I wasn't at home or didn't want anyone to
see it.

6786. Swap scanners for CB's

Newsgroup: rec.radio.scanner
Date: 1997-03-29 00:00:00 UTC
From: Nick Marsh <nickwb4sqi@wwd.net>
Message-ID: <333DAB15.440@wwd.net>
Source record: 202508
Cross-posted to: rec.radio.scanner,rec.radio.cb,rec.radio.swap,alt.radio.scanner

I have the following scanners to swap for CB equipment.

RS PRO-33 vhf l/h and uhf - 20 channels, power supply and manual, gc.

RS-PRO-2010 vhf l/h and uhf and vhf air band - 20 channels, mint cond.

RS-PRO 2035 1000 channel, covers 29 - 510, 760 - 1300 mhz, cell blocked but receives cell images at 1100 - 1115 mhz. AM, Fm and WFM, mint cond.

Uniden BC-350a base or mobile - 50 channels, service search, MArine, police, dot, fire, etc. Good Condition.

Yupiteru 7100 1000 channel covers 100 khz to 1650 mhz continuous coverage, no cell block. AM/FM/WFN/SSB modes, fantastic receiver, AM filter mod upgrade. Very good condition.

Will trade the PRO-2010, 33 and Uniden towards Grant XL or Cobra 148 or similar.

The PRO 2035 and Yupi I'll consider trading towards other high dollar rigs, Brownings, Trams, Galaxy, Northstar, RCI, Uniden 2510 or 2600 with Chipswitch. Current selling prices for the 2035 is about $225 and the Yupi about $400.

Lets talk about a trade....

73 and happy Easter

Nick

1. This is baloney. Radios designed as scanners lack the circuitry needed
to transmit.

2. The FCC takes a very dim view of unlicensed stations and transmissions,
and violations can result in massive fines
and even imprisonment. Unlicensed transmissions are a violation not only
of FCC rules, but federal law.

3. Where would you plug in a microphone?

Got to Q's

Q1
How come my UBC3000XLT find freg's in the range 430 - 438 when my IC
R10 dosen't. Is it the socalled images ?
Which one is the bad guy

Q2
In my logbook i have this "old" Q from when i first got my r10. When
the 3000xlt is set on freq. 418.4 NFM og my ICOM is scanning over
399.9999 -> 400.0000 NFM The the Uniden is activated !!!!

If i go Up then i get sounds like a transmission was end and then
nothing
If i go Down it sounds like ctcss tone encode signals
At 400 mhz on r10 it gives just endless white noise in the
uniden

Q3
When the Uniden is located on 418,4 Mhz and i scan with the R10 using
0.10 kHz steps then i get the uniden activated on every step on the
third decimal -- that is whenever the ICOM is going .005 up or down.

Q4
When i power the R10 on it activates the Uniden as thoug it was a
transmitter ? The noise is different on diff. places in the band.
When they bot are set on 418.4 they don't trigger the squelsh
Hmm....

BTW i can also scan my computer keyboard and mouse :)

Please give me some plausible explanation on what goes and tell me
which one to get rid off.

Best regards

Stephan Walther-Larsen
email to : ICOM@earthling.net

>
>FAN

This is absolute and utter nonsense, and likely posted as a cheap
attempt at causing someone difficulty.
While I have no experience with the Channel Master antenna and I can't
comment on how "well" it works on the UHF military airband I can suggest
an inexpensive alternative. Radio Shack sells a little groundplane antenna
for about $15 to $17. Just trim the elements to about 7.5 inches to match
312.5 mHz - the middle of the UHF-airband - and it will work quiet well. I
use one with my BC9000XLT with excellent results. Of course, trimming the
antenna does degrade VHF performance somewhat - particularly VHF-Lo - but
like most everything, it's a trade off.

>
>
>Mike Dodds

Why do you want to keep a computer on while you are scanning? I find
most modern scanners have more than enough in terms of memory and
firmware to cater for the most demanding listener without the need to
interface them with a VERY noisy computer. In my experience whatever
steps you take to reduce noise you will always end up with some.
Watch out for printers too, my Canon BJ-200 transmits a very strong
signal between 140-150Mhz even when it is switched off, I usually
disconnect it from the mains when scanning.
Your AR3000A is an excellent scanner but keep it as far away as possible
from computers.
Good listening!

Mike,
I have one and am quite pleased with it. I hope to have
a review of it within the next few weeks. From what I have
read, it gotten favorable reviews when compared to the Icom
and Diamond discones.
The discone version of this antenna has also gotten good
write-ups(anywhere from 2db to 7dB gain(compared to similar
discones) with 4dB typical).

Hi Don,
Sportys has certain companys make items just for them, this is one of them, it only has 20 memory ch so it makes it very difficult to program in several if not hundreds of freq for the range it covers. I believe it was designed for the pilot that wants to monitor other freqs while flying into a airport. I have a Sony Air-8. I called Sony before I bought it and they said that it was made exclusivly for Sportys Pilot Shop. Well I bought it because it would provide Am as well as vhf air and up to 174mhz. I am now going to sell it because I just don't use it as much as I thought I would. Anyway I hope this helps you understand the philosophy behind it.

Thats sad...I shipped a regular ground track package on 02-27-97 and it
was Delivered on: 3-28-1997 at: 9:30 AM
Cost was About 3 bucks!

Sounds like you should have told the buyer that a shipment was comming
so someone could have been there.....It isn't UPSs' problem that the guy
wasn't there. Do you expect them to sit in his driveway and wait for him
to come home, or pay for it out of their pocket, leave the package and
hope like hell the person is honest enough to pay up later?
Sorry....doesn't work that way.

I am in the business of shipping packages UPS, FEDEX, and USPS. Ups and
FEDEX is the best carriers in the business.

I do agree that FEDEX is the best.....but you pay a price!

1Z854W250110000265 Is the package I sent and received one day service
for less than 3 bucks! Check it out

The very first thing to do is to hook up an "external" antenna
fed with coax
with the shield grounded. "External" here means an antenna "far
away"
from the computer. "Far away" means far enough to not hear the
offending
noise.

Works for me.

<<Your attitude and behavior isn't just illegal, it's dangerous.>>

OK, Jake, you wanna talk "dangerous, let's talk "dangerous." Why are avionics manufacturers (and/or installers) allowed to get away with selling ILS gear that can be jammed by a Part 15 device in the cabin or cockpit?

Considering the veritable sea of electromagnetic energy that we all must live in (and fly through), I'd say your'e attacking the wrong problem. Instead of making pointless laws against Part 15 devices on board aircraft (and good luck explaining this law to the snot-nosed kid in row 23 who's quick to hide his Game Boy when the F/A's walk by), why don't we mandate certain standards for EMI resistance on the part of the critical equipment? Trying to legislate an RF-free environment for an aircraft is like trying to legislate the sunrise. Believe me, you would have to be suicidally ignorant to tolerate any ILS (or other) gear that is bothered by a handheld GPS receiver in the cockpit. That ILS receiver you mention should be used for verification purposes only -- that is, verification of Newton's law of gravitation after you chuck it out of the airplane.

Wrong: Attack safety-related technical problems with feel-good legislation and self-righteous hand-waving.

Right: Identify the problem (if indeed there is one -- I have yet to see any scientifically-valid documentation of this mysterious "jamming" effect) and take appropriate steps to correct it at its source.

Simple enough, huh?

Two possible solutions:
1. If the noise quits or diminishes when the antenna is removed, go to a
outside antenna.
2. Turn the computer off. :)

Is this a wunnerful example of a free society for us to
be enjoying?

Someone asking if it is "legal" to print or publish collections
of numbers and letters meaning little to the average viewer and
major impetus to the "sophisticate"....

so by this maybe it will be legal for the unsophisticated to
read and print and illegal for the people who "use it" it.

sort of like the glass pipes for smoking...it was ok to own
one, but you were owning it illegally if you smoked from it.

Afraid to post or to print or to publish that which is gotten
freely and then deemed wrong to have in possession by some
agency with nothing better to do ....

Get this: Malaysia has just called for women to wear CHASTITY
belts. The government is in the YONIAL-protection business
so the men will be happy that their female property is not
being used by others.

go to: http://www.malaysia.com

my guess is that they don't allow 'scanners' in this country.

Might hear how they treat the women who don't wear the constraints. The more things change, the more they remain the same. The genius of the Military mind.

6833. ## NBFM off-frequency reception question

Newsgroup: rec.radio.scanner
Date: 1997-03-29 00:00:00 UTC
From: techno@actcom.co.il
Message-ID: <E7tGKG.Jv@nonexistent.com>
Source record: 202570
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello!

I have a question regarding reception of a NBFM signal by a receiver
which is a bit off frequency. This can be the result of a receiver
(such as a scanner) who's frequency tuning steps on a certain band
are different from the channel spacing on that band. Another reason
can be a misaligned or drifting receiver LO (local oscilator).
The question is: how far off can the input signal frequency be from
the scanner frequency?
Of course, it also depends on the scanners selectivity and NBFM signal
bandwidth, and of course more distortion will be present in an
off-frequency signal's recovered audio, but for a typical scanner
(Uniden/Radioshack), and NBFM signal (knowledgable people tell me
what's typical at VHF and UHF) what can be expected? I'm not talking
HI-FI, just inteligible received audio.
Thank's for any help offered.

regards,
techno

(P.S: please email me directly in addition to posting here, so no
responses are missed. Thanks!)

One major advantage...well I guess it really depends on how you view it...is
that the imaging is fairly strong so you can get most of the cellular
frequencies if thats what you want,,,not that I do

6837. Business Itinerate Rules?

Newsgroup: rec.radio.scanner
Date: 1997-03-29 00:00:00 UTC
From: n0ovf@mindspring.com
Message-ID: <n0ovf-2903971543360001@ip33.duluth.mn.pub-ip.psi.net>
Source record: 202574

Can someone enlighten me as to the rules for using the business itinerate frequencies (red, green, etc.. dot freq..) (151.625, 154.600, etc...)?

I know radios using these frequencies are sold to people w/o licenses of any sort. What are the power & use restrictions?

Thanks!

Just call Transcrypt to get two digital encryption boards for your baby monitor. That will only set you back $500 or so plus installation.
Or go to Radio Shack and buy wired intercoms for $50.

OK, let's suppose it is illegal, which I doubt. Since I collected the
info off of the internet, and there were no indications that it was,
in fact, illegal, prove my intent to break the law. I suppose it
could be considered contraband, and I could be forced to surrender
them, but that's about it. IF it's illegal at all.

Be Safe!

Sure. Check the specs for bandwidth and make sure that it covers the
frequency ranges that you want. Some cut off at 450 mhz, get one for
CATV or satellite. I have one that's 30-900 mhz, it's a 2-part jobby,
there is a power inserter that plugs into AC, and the actual 'bullet
amp' that installs below the antenna. I tested it on the temporary
setup with ok results before climbing the pine tree/tower.

I'm looking for a Bearcat 760XLT. Age is not too important, as long as it's in good condition electrically and cosmetically. It would be nice if cell. is already enabled, but not necessary. I would also prefer a scanner with the CTCSS (aka PL) chip already installed, but again not necessary. Should come with DC and/or AC cord(s), book, ant, and box. Please reply if you have what I'm looking for, and maybe we can work something out.

If you're looking for traffic helicopters reporting to their newsrooms,
try the Aux. Broadcast ranges 450.00-450.99 and 161.64-161.76. For helicopter
specific communications, try 123.025 for air-to-air and 123.050 & 123.075 for
UNICOM at heliports.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu

6861. Re: Trunk Tracker

Newsgroup: rec.radio.scanner
Date: 1997-03-30 00:00:00 UTC
From: tom5fd@aol.com
Message-ID: <19970330204800.PAA11817@ladder01.news.aol.com>
Source record: 202378

Actually the Trunk Tracker is nothing like the sport cat. 200 more channels. Data lock out, etc.

It is worth buying if you have a TRS system nearby. It will cost around 269.99 tho, not the 350 that Grove Electronics is selling it for.

tom

6863. Air-Med Frequency for Baton Rouge, LA

Newsgroup: rec.radio.scanner
Date: 1997-03-30 00:00:00 UTC
From: "David M. Hitchner" <hitchnerx@xworldnet.att.net>
Message-ID: <01bc3d4e$62288f60$81e892cf@hal>
Source record: 202380

Does anyone know what frequency Air-Med uses in the Baton Rouge Area?
I have had some hits on some of the possible frequencies that it may be on,
(computer controlled scanning) but I have yet to actually here the audio to
verify
what it is. I'm always somewhere else at the time.

Yeah, same here. And initially, I too was somewhat underwhelmed. But I, as you, wound up keeping it, for its advantages far outweigh the negatives.

One thing you didn't mention: mine seems to eat batteries. I get four or five hours out of a set of fresh alkalines, and the "Low Battery" indicator comes on. Then it'll run for another ten hours with that damn warning flashing! I just shut off the beep and keep on listenin'.

You might want to consider a coax switch. Beware that the good quality
switches are not cheap. The downside with this method is that only one
radio at a time will operate through the antenna. Good luck.

Don't know what all the hullabaloo is about, I am on file in the FBI when I got my security clearance in 1958. Only thing I don't like is giving the RS sic.ANDROIDS my unlisted phone number (which costs me every month to be unlisted), even after I show them my drivers license, and other ID cards, with pictures on these items when I write a check.
I am not in the habit of carrying $100 dollars with me in cash, and writing a check is a necessity sometimes. I do not however like the idea of some turkey in RS corporate headquarters deciding that he can make

money for the company by selling lists. I don't give a damm if they sell my mailing address, my UNLISTED phone number is to prevent JUNK phone calls, and some of these Androids become hostile when I refuse to give them my phone number.

Sounds like some calibration data is wrong. After I start getting the low battery warning I get about 10
minutes until the thing starts getting weird, then I have to power it off.

I bought some 850 AH recharable NiCad batteries from Radio Shack with a charger. These give me about 8 hours
(something like that) of usage and recharge in 3 hours. I have been swapping these with the batteries that
come with the unit. So far it works ok. I spend a lot of time swapping batteries.

6886. Need advice on antenna installation

Newsgroup: rec.radio.scanner
Date: 1997-03-30 00:00:00 UTC
From: DA Honeycutt <k3458@Vnet.net>
Message-ID: <333F1D91.F9@Vnet.net>
Source record: 202403

I need your advice about several issues with my scanner antenna installation. I have a Radio Shack PRO-2042 scanner with a OS 535 and ScanStar software. I will do most of my scanning in the 800 mhz range. I plan to install a Radio Shack discone antenna on the eve of my two story house which will require only about 25' to 30' of coax. Is RG-213/U the best choice coax? Since I will have to use a PL-259 to BNC adapter at the back of the scanner, would I have less total losses if I used RG-58 or RG-59 so I would not need to use an adapter? Maybe I should change the BNC connector at the back of the scanner to a SO-259? What's the best plan? One more question; what should I do about lightning protection?

Thanks in advance for the read and comments,

I was curious why does the Los Angeles County Sheriff's radio system is set up where the units only hear beeping when another unit is talking to the dispatcher and only can hear mobile to mobile when the dispatcher puts the frequency on the "patch". What is the benefit versus a open system(ie LADP)where everyone hears all the radio traffic being broadcast.Why did they set it up like that ? Any LASD deputies out there that can answer....

Jon

I have for sale a couple of AS-3886-AN Military Discone antennas.
The antenna is 108" tall, folds into a 3 foot canvas bag with shoulder
strap. N connector, rated at 5KW, made by TRW for the TRC-191 system.
Perfect for 6 meters, scanners listeners, FM BC and anyone who needs a
good, resonant antenna. Military collectors will like them too!

These antennas are NEW/complete in bubble wrap & 36" canvas bag:

frequency range: 25MHz to 400MHz(if coaxial network removed(in
hub)
you can go lower into 15m by adding wire ring to
top
gain: unity gain over frequency
geometry: discone
weight: 8 pounds
mounting: snap in mast adapter 1 3/4"
materials aluminum tubing & hub, stainless hardware
color GI Joe Green

top elements 35"long x 6
bottom elements 102" long x 6

I will ship for $200 each plus $10 shipping
I have 3 left

102" replacement elements, fold to 36"(3 fold) $10.00 ea. $4 shipping
These elements are available in quantity, please e-mail with the
amount. Priced accordingly.

The best $200 discone you can buy when you see what a $100 discone
looks like. There simply is no way you can't like it.
It has alot of possibilities if you like antenna brewing.

Please e-mail me to reserve one & my address info: rafman@kerrlake.com
Thank you!

Ok, now here is some thing I don't understand.

Me say this...
:2) The wide NFM B/W (15kHz really is too big for me in Australia, cause
: there are alot of strong data channels beside weak voice on the standard
: 12.5kHz and the voice gets blasted by the data.

barryo*@*fastlink.com.au (Barry O'Grady) Replys this...
>I live in Australia as well and I disagree stronly with the above comment.
>In spite of what Avo says there are in fact a lot of strong data channels
>beside voice on the standard 12.5kHz,

Is that not what I said above??????

Me also say this...
:Final comment is that the R10 reminds me alot of my old ICR7100.

>That would have to be the most pointless comment of all. The R10
>would remind you very little about most other scanners as well.

Well it does, receive wise which is the context to which it was stated.
Anyways, I like pointless comments :-)

Hair! Here!

I own a IC-R10.. I have no real gripes.. Its my first eva scanner and
I'm happy with it. One thing though.. they could have atleast have
made the scanner waterproof, no good listening to it in the bathtub :)

Don't be surprised to hear aircraft on 1030 MHz also.
Apart from military aircraft with their own interrogators,
ie. AWACS; civil aircraft with TCAS/ACAS also transmit
on 1030.

where do you get this info from? The part that a computer hooked to a server is a fax machine....?

I realize that a fax machine is a small computer that sends and receives images imprinted on paper and what you get is what you see...but a computer hooked up to a server don't quite meet the same criteria as a fax...

so give us your background notes for the implications and the reasoning and an official declaration of "case closed" about this issue.

Promise this to yourself:

"i will invent a name and phone number and address
for uses at Radio Shack...an agency of the FBI.

"I will not be upset that these morons ask these
redundant questions over and over again...no matter
how often I go to that store and buy a piece of RS
history.

"i will therefore give a different name and phone number
and address just for the hell of it to these RS agents
of the FBI.

One of these days there will be an addendum attached to
the sales slip: sort of what Sears does when you use a
credit card. That will say: Soc Sec Number.

No number, no goods. Sort of what California does when
we go to get our driver's license: we have to give our
federal id to get a state license. No number, no license.

Remember: there is a card being developed which holds
much RAM of your personal history in that little piece of
plastic. I would not be surprised that the FBI gets free
downloads at their request...in the name of national
security.

and like rats in a cage we all sing "and the land of the

This is my personal experience with the IC-R10. This is not technical, just general.

I was one of the people who had to have the IC-R10 the day it came out. I read the ads, read the web pages, looked at the pictures, read the specs and generally lusted daily after the IC-R10. I had to have it! I paid for it sight unseen, waited a few days then picked it up, ran home and with the reverence of a religious ceremony, opened the box, turned it on, programmed in some frequencies and started to scan. I was expecting this to be the killer scanner of all time. Well... I was a "just a bit" disappointed by my initial experience. I used it for 4 days and brought it back to HRO to exchange it for the AR-8000 (they have a great exchange policy). This thing was slow and strange, not what I expected! Blahhhh!

Well... I ended up keeping the R10 and here's why:

1. Its small. After carrying it around for a week I was hooked on its size. I could slip it in my pocket, hold it in my hand while driving. Slip it in my bag... generally just always carry it around with me.

2. Great feeling. The thing is solid. It reminds me of HP equipment. After a month in my hands (I do take it out to sleep) it still looks new. The knobs are still firm and precise, the plastic is strong, the buttons solid. It just feels good in my hands.

3. I actually enjoy the strange key sequences for doing things (ya, right). I have it wired now, its kind of like a video game. Everything you do to the thing requires two hands. It's a challenge.

4. $100 less than the AR-8000. I really didn't want to spend more money.

5. Built in computer interface (someday I'll use it).

6. Built in interface for the Optoelectronics Scout. I'm going to buy one this week!!!! Did I say I didn't want to spend more money?

7. I've heard it's easy to modify.

8. Lots of ways to organize frequencies: 1000 channels (800 general in 16 banks, 100 lockout in 1 bank, 100 autowrite in 1 bank), 20 general scan ranges, 10 ranges in Easy mode (very useful since it's the only scan mode that can be restarted with one button press, stop laughing!).

9. Great display. Clear, easy to read (great for us old guys).

10. Seems to work well. I have the thing on day and night. I receive all the stuff I want. I bought the Diamond RH77CA antenna for harder to

receive signals but use the standard antenna most the time.

11. Fun to play with. The Band scope is entertaining. Turn the top knob to continue/change direction of the scan, wow... I�m easily amused.

12. Entertaining manual. It�s like a free puzzle included. Some titles don�t match paragraphs, instructions are incomplete. Free �Twilight Zone� feelings included when reading this manual... I spent a lot of time saying �what?�. Don�t read further unless you want me to tell you the secrets. You have to figure out on your own how to delete frequencies (hold the �CLR� key for 2 seconds while in edit mode). You have to figure out that you have to hold the �edit� button for 2 seconds to actually store your edits.

13. I love the controversy. I was an owner of a 63 Chevrolet Corvair, Atari 1040 ST computer, 1970 Volkswagen Van.

I�m not trying to get anyone to buy the darn thing, but after reading so much bad stuff about it I just wanted to say that if you�re interested in this scanner you might enjoy owning it. Yes, it�s slow, yes the firmware is a little on the strange side but overall the thing works well and it�s not all that expensive.

Happy Scanning!

Rick G.

Cordless
>> phone calls when I install my new Diamond Discone antenna? Right now I
can
>> only pickup on my next-door neighbor's cordless phone, I am hoping the
new
>> antenna will give me a better radius. Please email me if you know.
Thank
>> You.

I use a RS discone and a Grove Scanner Beam. On the discone I can
hear
signals out to 1/2-3/4 of a mile. The beam I can hear approx. 3 miles.
The discone is at 40ft and the beam at 80ft, so your results may vary!

>that bandwidth?

I understood it to be channels 60 to 69 (UHF) not 2 to 6 (VHF)

--SCANTEXT APRIL 1997 DURHAM REGION--

Scanner information packet for the Durham Region, Toronto Metro, York,
Halton, Niagara, Hamilton-Wentworth Regions, and Northumberland, Victoria,
Peterborough, Hastings and north New York counties. Includes police, fire,
ambulance, air marine, trunked, government, military, railway, satellites
plus a whole lot more. NOW includes over 3200 records for the scanner
database. Shortwave information now includes Radio Canada International
schedule and over 2700 records for the shortwave database. Now inlcludes
a air/marine beacon and TWEB database and listing.

Verticle polarization will make a big difference. You might want to
take a look at the Grove Scanner Beam. It is nothing more than a recut
tv antenna, but for the price{59.99} it will save you quite a bit over
the Create. I was skeptical of how well the scanner beam would hold up
in the weather, but we have had several wind storms of 50-60mph winds and
it is doing fine. BTW it is mounted at 80 ft. in a tree, so it gets all
of the wind. I have seen several posts saying to buy a tv ant and mount
it vertically, but all the tv ants I have seen comparable to the beam are
more than 40 bucks, so take your pick. If you go with a tv ant I would
want to mount it vertically and offset from the mast, otherwise you may
cause a interaction with the mast and coax distorting the pattern. My
curiousity is getting to me, so if I get the time this weekend I'll see
if my tv ant will out perform the scanner beam. It is in another tree
about the same height, so I'll turn it verticle and run some decent coax
to it. I'll post what I find out.
Kent

>If this link works, look here!
>http://catmac.grove.net/CGI.SPG?L=F&P=ANT+1

I have the Grove Scanner Beam and a RS discone. The beam out performs the discone by a large margin. The beam is nothing more than a recut tv antenna, so if you have wind and freezing rain I would go with something more stout. Kent

6915. Re: Computer Noise!!

Newsgroup: rec.radio.scanner
Date: 1997-03-30 00:00:00 UTC
From: adam_gott@nospam.com
Message-ID: <333e3ca2.60931505@199.104.80.6>
Source record: 202440
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

I used to have tons of computer noise throughout the spectrum on my old computer but on my new computer that noise is almost nonexistent. I am now using a FIC PT-2006 motherboard and CYRIX 150+. The case is always off (there goes the grounded case theory) due to the CPU overheating and I still get good noise response.

My point is that if you have tried everything and still can't get it fixed try getting a new CPU/MB or other components.

My system for those that wonder which components of mine are RF friendly:

FIC PT-2006 mb
CYRIX P150+ CPU
Diamond Stealth 3d Video Card (the vid card may be a major source of noise?)
Sound Blaster 16 PNP (Vibra I think they call it)
Practical Peripherals Internal 28.8 modem

Don't listen to others that say you don't need your computer on when using your radios! I used to have to do that too and wonder how I survived without the computer before. I don't have any computer controlled radios either but find the computer invaluable for signal recording, logkeeping, database lookups, etc.

The local oscillators and digital circuitry generate a small amount of
RF energy that is present whenever the unit is on.

Are you sure it's 1.1.96 ?
In the summer of 95, scanners were freely sold in shops
and department stores in Germany.
They wouldn't do that if they were not allowed....

michaelkr1@aol.com (MichaelKR1) wrote:

>I would like to get the skywarn freq. for NC

There is not one single frequency. Typically, SKYWARN uses the widest coverage repeater in each geographic area.

In Raleigh/Durham: 146.88

In Greensboro/Winston-Salem/High Point: 145.25

In Wilmington: 146.82 (88.5 pl)

In Charoltte: 145.35

In Ashville: Might be Mt. Pisga on 146.76, but I'm not sure.

and I believe Skywarn operates in the Moorehead City area, and on the Outer Banks, but I can't tell you the frequency.

I too originally thought the delete frequency keystroke was
undocumented, but it's not. It's just put in the diagram on
page 52 along with how to save edit changes.

> 13. I love the controversy. I was an owner of a 63 Chevrolet Corvair,
> Atari 1040 ST computer, 1970 Volkswagen Van.
[snip]

I too enjoy it's "uniqueness". But it is not for everyone
for sure. Great second or third scanner to play with or
take where people might be scanner-phobic!

Thanks for the thoughts Rick!

I think you have me confused with someone else , because i will not
nor have i ever belittled anybody for asking a question. Now i have
been on here telling certain people to piss off if they don"t like
hearing or i should say reading the same questions over and over , but
that will happen because there is always new people joining in every
day. That is what these news groups are all about and that is what a
"DELETE" key is for if you do not want to read it.
Now i do hope that this hobby will grow, because i know i enjoy it
very much.
Lets enjoy this news group and enjoy our hobby, take care and happy
scanning.
The Dungeon Master said that.

I may well be wrong, but as I understand it, the radio will automatically ID the individual talk-groups, and then you'll be able to choose whether or not to include it in scan. I don't know if it
displays the actual (programmed) talk group ID code or not, but even if it does I don't know if you'll be able to manually enter them in the radio. Someone correct me if I have the whole thing
backwards.

>and it seemed to work fine. So why are they so horrible?

I have done extensive side by side testing or the startek, opto and radio shack counters. In terms of the units ability to capture and display a weak (250Mw) signal the radio shack consistently out
performed the top of the line startek and was slightly better than the opto cub in a high RF backround level environment (Chicago). The starteks all have LED displays, which can be hard to read in
direct sunlight, but if you prefer them, the older opto models had LED displays. The Radio Shack is also the only unit that you can run on regular AA batteries, if that's a concern. Personally, I
like it's rather huge display, and you can lock the back light on for night time use.

>scanner, what would these features be,

1. PL & DPL Receive, Detect and Display
2. A signal strength meter
3. A Dataskip feature that really worked on all non-voice signals
4. 50 banks of 50 channels, easily selectable in and out of scan
5. Good service search presets
6. An illuminated keypad and backlight that you can lock on
7. Lockout frequencies from searches, at least 1000 and an easy clear for the feature.
8. Programmable step size, like the AR-1000 only down to a single hertz, or, selectable from this list in Khz:
.1, 1, 5, 6.25, 10, 12.5, 15, 20, 25, 30, 50, 100 (in any mode)
9. AM Wide, AM Narrow, USB, LSB, Wide Normal and very Narrow FM
9a. Proper default mode for varying frequency ranges
10. Triple conversion receive
11. Alphanumeric display set up the right way
12. Non-Defaulting Entry: I.E., you enter a search from 461.1125 -to- 464.9875 in 25 Khz steps and the radio stays on just the interstitial frequencies.
13. Scans >50 channels per second, Searches >100 steps per second
14. Programmable attenuator
15. Linkable sets of 50 search limits
16. Built in duplex RS-232 interface
17. Auto store from search, stores each frequency found only once
18. Metal case and good internal shielding, water resistant
19. Excellent sensitivity and image rejection, at least as good as the Yupiteru's
20. Comes w/8 Nickel Metal Hydride or Lithium AA Cells and a rapid charger and DC power cord (It's a handheld)
21. Discriminator output jack
22. Line out jack
23. A good supplied earphone and earphone jack
24. A rugged BNC connector for the antenna
25. Big keys and a sane entry system and operating procedure
26. Big, Loud, Booming Bassy Audio from the internal speaker
27. Supplied leather or nylon carrying belt case
28. I.F. Output Jack
29. Cloning Cable
30. At least five selectable priority channels
31. NOAA Weather Radio Alert Siren
32. 10 Khz-2000 Mhz w/no gaps
33. Two or more VFO's
34. Under a grand

Why? - mine's under the edge of my monitor - no problem whatsoever -
BUT - there are plenty of steps you can take to remove computer
generated RFI.

Do a search for comprfi.txt - its available on many FTP sites
including ftp.funet.fi, ftp.cdrom.com to name two.

It has many suggestions for eliminating RFI, but the most important
are good antenna ground, equipment earth and use an external antenna -
with sheided coax feeder.

Went to Sun TV today and bought a cheapo Electro Brand pocket radio.
It has features that I was looking for in the FAR more expensive
Pro 60 handheld scanner (ie. TV 2-13 and of course 88-108 Mhz).

This pocket radio apparently picks up out of band stuff
which is the cool part. Just to the left of the weather frequency
of 162.55 just happens to be my hometown's police dept. frequency
159.15 so I have a police radio, as well as one railroad frequency and
one aircraft frequency (just beyond 108 Mhz).

Not earthshaking, I know. But not too bad for $9.
The cheaper version of this radio (minus AM) is avail. at Sun
in mass quantites for $6 but I don't know if it gets the out of band
stuff. And unlike many scanners, you can put this puppy in your pocket
and it runs on 3 AA's.

FYI

Mike

Hello
I put up a preamp to help offset the loss on a long coax run,but a strange problem cropped up.I have a Pro 2006 hooked to a Discone about 55 feet high and since i put on the amp I have to turn on the attinuater to pick up low level signals in the vhf
hi range no problem in Lo or uhf. I can pick up signals that werent there before with the amp turned on AS LONG as i switch on the attinuator. Any Ideas why it has to be on Noise or somthing maybe?
Thanks rick@clandjop.com

They sell equipment that receives AUTHORIZED transmissions in AUTHORIZED
bands. It CAN be jammed by an UNAUTHORIZED transmission in the cabin -
that IS the whole point of the regulation - to give the flight crew
the power to stop transmissions that interfere with normal operation.

Here is a VERY FEASIBLE example. My security system in my house
generates
spurious RF all over the place - my BC3000XLT and my Alinco DJF1T pickup
numerous spurs in the aircraft band from the security system. Now,
suppose
that a sales rep has a portable demo version of this in a briefcase in
flight
and he decides to show it to the guy sitting next to him. He powers up
the system, and starts generating spurs at 125.75 Mhz which happens to
be
the frequency for Air Traffic Control. The spur could be stronger than
the
ATC signal - in some areas, ATC signals are VERY weak and are just above
the noise level.

This is the problem that the legislation addresses. It gives the flight
crew the AUTHORITY to control a potentially hazardous situation.

> Right: Identify the problem (if indeed there is one -- I have yet to see
> any scientifically-valid documentation of this mysterious "jamming"
> effect) and take appropriate steps to correct it at its source.
>
PC Magazine documented this problem last year while researching the law
as it applies to computers in flight. They interviewed individuals from
the FAA who have several documented cases of this problem.

several stores collect this information so that they
can see who their customers are.
How far do they live from the store?
male or female.
what did they buy.
how often do they buy stuff.

Tandy can then target their advertising dollars
more effectivly.

I find it hard to believe that tandy would just
hand over lists without any court order etc.

However anything is possible.. O J got
away with murder

> I'm not sure if they're designed for this purpose?

Duplexers are SPECIFICALLY designed to let 2 trasmitters/receivers share an antenna, but they are designed for specific frequencies/bands. The odds are good that most of the stuff you want to hear will be be trapped, and your CB would probably be VERY unhappy transmitting into a ham radio duplexer.

It's a REALLY bad idea to allow electrically coupled RF (ie both radios on 1 antenna wire) of more than a couple hundred millawatts go in the front end of a receiver, unless it's protected by a duplexer tuned for that purpose. ZAP........

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
60 old and new scanner radios and monitor receivers. Other
topics include:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units

unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 , Bearcat BC-101 , and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which

were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable |

Note: Reprints of Monitoring Times articles are available for $2.00 each (plus self addressed stamped envelope) from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this $2.00.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface

included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-

meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good

performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs

and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered

different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate.

Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test | report, see "The RELM HS-200 Portable Scanner," by Bob | Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan.

Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 -

612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast.

Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were

used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no

aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Model	Sonar #chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline

and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal,

American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

6971. Bearcat 890 XLT

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: "Eugene W. Lenard" <glenard@ix.netcom.com>
Message-ID: <5hpigi$crj@dfw-ixnews12.ix.netcom.com>
Source record: 202231

Am am thinking about buying a Bearcat 890 XLT and have questions.
1. Are they any good?
2. What's a good price (have seen for $225)
3. Is there a better scanner for that kind of money?

Hi,

Wanted to take my scanner on the road driving (NE to PA), what is
there to
listen to along the way, esp. state patrol, CB's, weather, speed
traps?

Thanks!
-Matt

Matt,

You had better check local and state laws regarding having a scanner in your vehicle. Here in Indiana you must have a letter of authorization from local law enforcement (ie: Sheriff, Cheif of Police). An exception might be if you are a Volunteer Fireman, Reserve Police Officer, or EMT. The State Police have no problem with confiscating your scanner, I know of at least one case where this happened. Just to be on the safe side, check first.

Troy

According to "Newsline", there was a _request_ for giving up 5 of the 10 channels in the 60 to 70 channel portion of the spectrum.

What the other person might be thinking of is the fact that the FCC is letting all the television broadcasters have a SECOND channel for free. In exchange, the broadcasters are to put the new HDTV signals out on the second channel within a few years (5, I think). I caught this on a National Public Radio "Morning Edition" show a couple of weeks ago.

Ray

6976. WTB: Inside window antenna

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: Steve Walker <smwalker@mail.telis.org>
Message-ID: <334063E8.57DB@mail.telis.org>
Source record: 202236

I just recieved a used BCxlt 600 and need an inside window antenna lead similar to the one that comes with the BC 760 xlt. It is bassically a wire with some suction cups and the correct plug on the end.

E-mail me if you have one you are not using and need to get rid of. I am in california near pasedena

Thanks

6977. Help: Pro26 receiving CB

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: bich@scd.hp.com
Message-ID: <5hpgbb$182@hpscit.sc.hp.com>
Source record: 202237

Help, please.
My Pro26 only picks up CB at extreme close range. How do I improve the sensitivity? Is it the antenna at fault here?
Thanks,

bic

In article <333AA355.6DF@ricochet.net>, cwheeler@ricochet.net says...

>On a side note regarding spread spectrum. Using several SS devices over
>the last year I am convinced that freq hopping or hybrid spread sepctrun
>is the only way to go on 900 MHz. Direct sequence cause more
>interference with other user and seems to much less jam resistant than
>manufacturers claim.

Huh? Between FH and DS, FH causes *far* more interference to others. FH allows a fixed carrier (ordinary modulation on top of it) to sit on one frequency for up to 400 ms., typically a whole packet. So if you're doing something when the hopper sits on you, you hear it in full power. DS spreads it out so there is no frequency with a high spectral density; it's background noise to anybody else not correlated on it.

I do like my Escort phone, but note that it, like other DS 900 MHz units, runs in time-compression mode (switches the handset and base from receive to transmit many times a second) because there's not enough spectrum to receive and transmit simultaneously. This causes a buzz in nearby susceptible gear (in my case, the answering machine that sits next to the base).

Radio Control Model aircraft. I also seem to remember that radio control
construction cranes use or did use frequencies in that range.

I have a DIAMOND DISCONE (forgot the model) but it has an N type
connector. Do NOT use the PL-259 with it as you will ruin it.
I bought a used scanner that had a type N connector on it and someone
had tried to use (probably successfully connected) a PL-259 -- the
center pins were bent and restoreable (but a couple times doing that
would break the connector.)

I recommend you follow the caution in the manual and get a type N to
whatever adapter at RS or your local electronics store -- you will pay a
few bucks for it but -- don't ruin your equipment.

I have a rather old scanner (18 years) and I'm in the market for a new one. I don't know a whole lot about scanning and have a few questions.

1. Where is the best place to buy a new scanner?
2. How much does an OK 100 chan. scanner cost?
3. Can a better scanner be bought for less than $175?
4. Is Raido Shack any good for anythig?

I thank you in advance for any help that you can give me.

I suggest using separate antennas.
The best one for the scanner would be a discone
because of the wide range of frequencies. and a regular
cb antenna for the cb.

Last year I purchased a BC230XLT primary for listening to NASCAR events track side. I also got interested in listening to the various local activities, i.e. police, fire, etc. The I joined this magnificent mailing list and had my eyes and ears opened to the other possibilities of the radio spectrum.

Now I find myself interested in a higher quality handheld scanner and have seen various ads for the ICOM R10 and AOR-8000. Would you please enlighten me as to the merits of each and an overall rating. Should I be looking at different possibility? I am very interested in the availability of a computer interface and the ease of obtaining a computer interface. I am also very interested in compatibility with the Opto Scout frequency counter "Reaction Tuning" feature.

Lastly, I would like to hear of other people's experience in purchasing unblocked (cellular) versions of these scanners. I have seen ads from both Canada and the U.K.

Your advice will be appreciated.

Best Regards,

Dirk Bremer
St Charles MO

Huh? There are hundreds of GMRS repeaters in use, they are extremely popular, and make the service useful. Most have multiple CTCSS tone inputs, and are very well maintained. I don't know of any in the area the original poster was asking about, but did want to clear up your point. They use standard +5 MHz spacing in the assigned 462/467 area.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which | allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost | programmables which can't search. Some of the newer | models, like the Uniden SportCat and Radio Shack PRO-2046, |

```
allow searching between limits, but the limits are factory |
programmed and cannot be altered.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver |
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance | squad members came to rely on their crystal controlled, | transistor Plectron and Motorola desktop monitor receivers. | They have now been replaced by battery operated portable | pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models | which can be powered from 117VAC or 12VDC with the proper | mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is
offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. You
can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated March 26, 1997 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

APRIL 1997

Apr 13 (Sun), Chicago, IL - CARC Ham Auction. DeVry Tech, 3300 N. Campbell Ave. Will auction your electronic goods at this auction if you bring them in before 12 noon. All goods subject to 10% donation. If purchased back by the sell, then 5% will be due. All sales as-is and final. Info: Dean (708)331-7764 or George (312)545-3622, days.

Apr 19 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Apr 20 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Apr 27 (Sun), Arthur, IL - Moultrie ARK. Contact Ralph Zan-cha, WC9V, tel (217)873-5287.

MAY 1997

May 3 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, 8:00 AM. Circle B Recreation Center, Intersection of HY 60 and Ozaukee Cty I. Talk-in on 146.37/97 and 146.52 $4.00 Amateur License exams. Amateur Radio. Computers. For Infor-mation Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 4 (Sun), Sandwich, IL - DeKalb KARK Hamfest. Sandwich Fairgrounds at Suydam and Gletty Roads. Admission $6. Overnight camping on grounds $10. Talk in 146.73 (-600 kHz) | or 146.52 MHz. Info: Bob Yurs, N9ZNA (815)895-3219 or n9zna@aol.com. Web page: www.tbcnet.com/~jleonard/hamfest.htm (Good, medium sized fest which grows each year. Good restroom facilities. Few commercial exhibitors. - AJ9S).

May 10 (Sat), Peotone, IL - Kankakee Area Radio Society ham-
fest. Will County Fairgrounds. I-57 to Peotone exit 327
(east). 6 AM. Admission $4. Talk in 146.94 MHz. Info:
Willis Bowser, K9IFO (815)472-2079.

May 18 (Sun), Orland Park, IL - Giant Computer show, Orland
Park Civic Center. See notes at the end of this article.

May 25 (Sun), Chicago, IL - Chicago ARC. DeVry Tech, 3300
N. Campbell Ave. Admission $5. Info: (312)545-3622 or
(312)486-6823.

May 31 (Sat), Springfield, IL - The Sangamon Valley Radio
Club. Illinois State Fairgrounds. This Hamfest is "rain or
shine" with over 100,000 square feet of covered and lighted
fleamarket space, plus indoor facilities. Info: Don, W9EBK
at 217-789-4519.

JUNE 1997

Jun 1 (Sun), Princeton, IL. Bureau County Fairgrounds.
Free parking. Info: Debbie Burton, N9DRU, 1153 Union St.,
Marseilles, IL 61341-1710, tel. 815-795-2201 (Usually an
excellent hamfest, with sellers from Illinois, Iowa, and
Wisconsin. - AJ9S.)

Jun 8 (Sun), Wheaton, IL. Six Meter Club of Chicago.
DuPage County Fairgrounds, 2015 Manchester Rd. 7 AM.
Admission $5. VEC tests 9 AM - 1 PM. Talk-in on 146.97 MHz
(107.2 PL) or 146.52 MHz. Info (708)442-4961 or contact Joe
Gutwein, WA9IRJ, (630)963-4922.

Jun 8 (Sun), Orland Park, IL - Giant Computer show, Orland
Park Civic Center. See notes at the end of this article.

Jun 22 (Sun), Wheaton, IL - Giant Computer show, DuPage
County Fairgrounds. County Farm & Manchester Rds., Wheaton,
IL. See notes at the end of this article.

JULY 1997

Jul 13 (Sun), Sugar Grove, IL - Fox River Radio League, Wau-
bonsee Community College, Rt 47 at Harter Rd. 6 AM. Admis-
sion $5. VEC tests 10 AM only. Talk in 147.21 (pl 103.5 &
107.2 Hz) Info: Diana, WD9API (630)293-7485.

Jul 26 (Sat), Pecatonica, IL - Rockford Amateur Radio Assoc.
(RARA) Amateur Radio and Computer Hamfest. Winnebago County
Fairgrounds, about 15 minutes west of Rockford, Il. Talk in
on 146.61 MHz, 114.8 Hz PL. This will be in the main exhi-
bition hall with room for tables. Ham Radio Vendors, Com-
puter parts vendors, tailgating, food. Code receiving con-
test, Throw the Radio contest, Great door prizes. For table
reservations contact Mike Anderson at (815)397-4304 or
mander5@ix3.ix.netcom.com. For any other information con-

tact Marsha Plasters at (815) 399-9233 or wa9ffl@aol.com or |
see http://www.rockford.com/rara/index.htm

AUGUST 1997 *

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tailgate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325. 414-325-7427

Aug 16 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Aug 24 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. 6 AM. Admission $5. Talk in 146.52 MHz. Contact Bob Grosse, N9KXG. Info (voice/fax) (847)658-1678. http://www.angelfire.com/il/tcrg/ (Smaller, but fun fest. - AJ9S)

SEPTEMBER 1997

Sep 7 (Sun), Joliet, IL - Bolingbrook ARS. Inwood Recrea- | tion Center, 3000 W. Jefferson St (Rt. 52), Joliet, IL | Admission $5. Outdoor flea market on paved parking lot. | Indoor reserved tables. VE testing 9 AM - noon, bring ori- | ginal license and photocopy. Talk in on 147.33 (+600 kHz), | 224.54, and 146.82 (-600 kHz). Table Info: Ed Weinstein, | WD9AYR, (630)759-7005. |

Sep 27 and 28 (Sat & Sun), Grayslake, IL - CFMC's Radio Expo 97. Lake County Fairgrounds, Rts 45 & 120. Admission $6. Talk in 146.76 MHz. Info (708)457-0966. (This is probably the biggest and best hamfest in N. Illinois - AJ9S).

NOVEMBER 1997

Nov 15 & 16 (Sat & Sun), Fort Wayne, IN - Fort Wayne Hamfest. Indiana ARRL State Convention. Allen County War Memorial Coliseum Expo Center. Sponsored by the Allen County AR Technical Society. Admission $5. Parking $2. www.pipeline.com/~dagagnon/. Info: (219)484-1314.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which | allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost | programmables which can't search. Some of the newer | models, like the Uniden SportCat and Radio Shack PRO-2046, |

allow searching between limits, but the limits are factory | programmed and cannot be altered. |

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band. *

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In | general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The new RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-62 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception

superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end

scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $2.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of the $2.00.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new, 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national

scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities,

highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

- 2 -

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

I have an Icom R 7000. It only has one scratch on the display. It
receives 25-2000 MHZ except cellular. $700 and i'll pay shipping.
Email me if interested . Only selling it because i'm going to college
and it's too big for me to take and i need the money.
Thanks, Ken

From: craze@fia.net
Message-ID: <33404e0d.6081481@news.alt.net>
Source record: 202311

I was put under the impression by a post some time ago that cell phones operate between 868.000 MHZ and 899.000 MHZ I will assume that is correct for the moment.
What am I getting above 900.000 MHZ? Are these the images I've seen discussed here or are they actually the frequency being used by the cell system. From the comments made there, there is no doubt they are cellular.
Someone was right earlier when they said not to worry to much about getting a scanner that will get cell. after about 5 minutes its pretty boring. But I'm still glad that the desire to do so convinced me to take back the Pro-60 and find a Pro-51 of 7A4 or earlier, I like the Pro-51 much better. dont know why but it seems to work much better, The pro 60 would go right passed some things that a 3 year old RS base would pick up even when scanning the exact same freq. even with a better antena than the rubber one that came with it.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is expected soon and will be available from Grove Enterprises for about $30. This second edition is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government | frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's

book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies * of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. Rich Barron | maintains an interesting site at htto://exo.com/~rbarron.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities

to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know

if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold.

That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 5A95, means the scanner was made in the 5th month of
1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be
ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a
Photophacts from Howard Sams Publishing division of

Prentice-Hall at (800)428-7267.

Parts lists for recent models are available on line at:
http://support.tandy.com/support_electronics/2849.html.
Parts may be ordered through your local Radio Shack store
or through Tandy National Parts, telephone (800)442-2425.

G & G Communications (telephone (716)768-8151) is a family
owned company which repairs scanners and stocks parts for
several older models, especially Electra/Bearcat and
Regency brands, but they don't sell manuals or schematics.
They are located at 9247 Glenwood Drive, LeRoy, NY 14482.
(http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or
ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022,
PRO-2004, and PRO-2005/6 is implemented by an
electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is
designated EL-501, and is identified by Radio Shack part
#10800050. A new EL panel can be ordered through your |
local Radio Shack store and sent to your home for about $32
plus shipping. Radio Shack no longer sells replacement EL
panels for the PRO-2004.

Replacing the backlight is an operation which requires care
and patience. The service manual has an exploded parts
diagram which is helpful in showing how to disassemble the
scanner.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables,
e.g., PRO-39 and PRO-43, can become unreliable after
prolonged use. The best repair is to replace the rubber
keypad instead of trying to restore contacts using
chemicals. A replacement rubber keypad may be ordered
through your local Radio Shack Store for about $6.00. |

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part
#EAS-3P123A). The voice coils in some of these speakers
have opened, resulting in lack of audio output, though
audio is still available from the earphone jack. A more
capable 500 mW speaker is available through Tandy as
replacement (EAS-3P127).

7015. BC140- OLD Bearcat...QUESTION:

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: Brent <medic345@voicenet.com>
Message-ID: <33406456.B4F@voicenet.com>
Source record: 202315

I have an older BC-140 10 channel scanner sitting in my living room at home. I bought the thing about 8 years ago or so....

Anyway...a few months ago, I noticed the thing would be scanner, or monitoring action on one of the channels, and it would flip to 'P' priority channel 1; THAT'S GREAT, actually;

The priority is a feature that this scanner did NOT come with; but, something happened that caused it to do it. For whatever reason, it is no longer doing it again.

Any insight on this odd scanner anomale?

It took me me three months to get a AR 8000 from Canada, the first one
was seized, the second one arrived within a week. Only paid for one.
Well worth the wait.

In LA there are 5 or 6 GMRS repeaters but they see little use. It's also very hard to get on them. Each repeater has several users that use it as their business repeater. Others need not apply. FYI.

As far as I know it is not illegal to ask for a name and address. You can simply say NO. This whole Radio Shack, name, address, FBI thing is a bit paranoid to say the least. Why would the FBI care what you buy at Radio Shack. Afterall isn't paranoia "delusions of grandure" ?

> that can answer....

Basically their reasoning is that the dep does not have to pay attention to the other transmissions thereby keeping his ear tuned for the dispatcher. Of course the Patch can be raised to allow deps to communicate with each other in a tactical situation. Actually I think that I would prefer to hear the other comms while I was in the field in order to enhance situational awareness and determine the disposition of the other officers in the field. Unfortunetly at LASD you must remember that dispatchers often are listening to multiple freqs with stations which are not usually co-located so that would cause a bit of confusion over the air all of the time.
Really, I think that the bottom line is that you have a 20 year old radio system which for reasons of officer/procedural standardization has not been changed.

Dirk,

I purchased my AOR-8000 from Javiation over in the UK a couple years ago
and couldn't have been happier with the radio and with the service I received
from Jonaton Clough at Javiation. I've not seen or played with the R10, but
have held on to it's predecessor the R1. Like what I've heard of the R10 it
has certain endearing qulaities. If, however, the R10 is something akin to the
R1 in performance I'd opt for the AOR-8000.

One more thing: "How 'bout them Rebirds"? I'm Kirkwood boy out here in
purgatory and sure do miss the StL area in general and Cardinal baseball in
paricular. here's hoping they can do it this year!

How well would a Celluar phone antenna work if I will only be scanning 850-900 mhz on my PRO-2042 w/OS 535? I'd like to use some type of antenna that I could mount in the attic of my two story house. Maybe an amplifier would be needed?
Thanks in advance for the read and your comments.

I have owned a couple of 8000's and currently own an R10. The 8000 is a wonderful scanner if you are willing to put the time in learning how to use it. The 8000 is not you out of the box put in frequencies and scan away type scanner. The computer interface will cost extra as will the mod to reaction tune it with a Scout. You can do the mod yourself if you are fairly comfortable with a soldering iron.

The R10 is a real quirky slow scanner but I like mine. It will also reaction tune a Scout as it stands it has a CIV port built in. Just connect the Scout set the R10 baud rate to 9600 put it in VFO mode and tune away.

It is somewhat like comparing apples and oranges the 8000 is definately a more powerful scanner but has a fairly healthy learning curve. But once you learn it is very functional.

Neither radio is very good at all on HF bands.

I have also heard good things about the Yupi 9000 which runs in the same price range. Buying from abroad is always a risk but I have heard of few seized scanners. IMHO Javation in England is the best source for scanners from abroad, great service. But if you are going to get the

computer software like ScanCat Gold for the 8000 you can buy a cut version here in the U.S. and the software will uncut it for you. This is not true of the R10 that I know of.

I can not imagine how this could be illegal. First off, it will
become public information and its is not illegal to monitor so it
can't be illegal.

Some may not like it but,....tuff.

Remember trunked radio systems were not designed to offer private
communications. The idea behind them is to offer more efficient use of
the radio spectrum.
Second,..Whats the difference between using old technology such as a
regular scanner or a device that will track and follow?

For indoor use, I've used a Radio Shack ampliflied VHF/UHF/FM portable antenna, Cat. No. 15-1607, $24.95. Comes with an AC adapter, or runs on 2 AA batteries for portable use. Does fairly well for
VHF-hi and UHF signals.

This is echoed by several of our club members. Here in Central North Carolina, we don't get a lot of snow, but sleet and freezing rain are not uncommon in the winter.
A couple of our members had Grove scanner beams, and they worked fine until winter. Then they crumbled like toothpicks.

One person replaced his with a CREATE log-periodic... it's about 5 times more expensive than the Grove, but it has lasted four winters so far.

You can also try a TV antenna, mounted so that the elements are vertical. Sometimes you can get a TV antenna for free from people after cable TV is offered to their area. They might crumble also, but if they're free...

Scott... Yes..they are indeed designed for this purpose.
I own a Comet CF530 diplexer as sold by many popular Ham
radio suppliers. This device would likely serve you ideally IF you
only intend to scan frquencies above 120 Mhz. I use this diplexer
with a larson mobile 2meter (144 Mhz)5/8 antenna that happens to
be resonant on 6m (50 Mhz.) as well. I run 52Mhz fm and 146Mhz fm
50Watt radios with the same antenna mobile, and always leave both on.
The low-band side of this diplexer is from aroud 90 Mhz and down,
but I think there's a model out there that splits around 30 Mhz as well,
in case you want to scan frequencies down as low as the 40-50 Mhz range.

Scanner Buff! v3.90 is once again available for the serious scanner enthusiast -- drop me your e-mail adress and I'll send it over to you.

Many of you are already familiar with Scanner Buff! It has been reviewed by Monitoring Times (with great comments!) and others. The very next release will include a FRS conversion. As it stands now, Scanner Buff! is user-friendly, robust and FAST and searching. A Query By Example section lets you search out even the toughest.

If you're interested just drop me your e-mail address and it's on its way.

> the FAA who have several documented cases of this problem.

Yes, but the real problem is that BOTH "receivers" and "transmitters"
should be able to handle any situation (except maybe a foot or so away);
in other words the receivers (aircraft equipment in this case) should be
designed well enough to reject "dangerous" frequencies that would
interfere with their operation and the transmitters (your scanner, PC
etc) should be designed so that they do not emit harmful levels of EMI
that could interfere with aircraft equipment. The only reason there are
documented cases of this problem is that the equipment isn't designed
right in the first place!!!!!

7054. motorola pager retuned?

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: aa357@yfn.ysu.edu
Message-ID: <5hoal0$2of@news.ysu.edu>

Hello,

I have a USA Mobile Motorola Pager and I was wondering if this
pager is able to be retuned to, say, 155.745 of 154.370? It is currently
tuned to 141.710 Mhz and was used as a severe weather monitor. Does anyone know
if this could be recrystaled and retuned? If so, are there any places where
I can get this done? Thank you for any information.

7055. Re: CHP Listening tips?

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: grohe@galaxy.nsc.com
Message-ID: <333fa209.852243@139.187.81.1>
Source record: 202355

On 31 Mar 1997 05:34:43 GMT,
in the newsgroup rec.radio.scanner,
allister@best.com (Allister Fiend)
from BEST Internet Communications, Inc. thoughtfully posted:

> I live in Sunnyvale California and I was trying to pick up the Highway
> Patrol on my scanner. I could hear the base station, but I could never
> hear the patrol car. I have the freqency that the cars are supposed to
> use but I have yet to hear anything. Are there some secret tips on
> hearing both sides of the conversation for the California Highway Patrol?
> I guess the nearest CHP station is the San Jose office on Junction Ave.
>

Seein' as I live in Sunnyvale, I may be able to help you! ;^)

There is no "secret" to receiving the cruisers, just common
sense. The frequencies used by the CHP are optimized for
long-distance, not convenience. The antennas required for their
frequencies need to be 5' or more long, as opposed to 19" for
VHF-HI and 6" for UHF. The dinky rubber-duck or "back-o-the-set"
antennas are just electrically too small to efficiently receive
the signals. Plus the chicken-wire used in most stucco homes can
block lower frequencies.

Here is a excerpt of one of my recent posts on the same subject:

The CHP radio system is a "duplex" system. The bases (dispatcher)
transmits on one channel, and the mobiles (cruisers) transmit on
another. The mobiles normally do not hear each other, but they
can switch to the base channel to talk "car-to-car".

So for each "area" (office), you would need to program two
channels.

However, it is not that big of problem. You usually do not hear
the mobiles, as they are usually pretty weak, and the dispatchers
usually repeat everything the officer said. So you only really
need to monitor the "base" channel.

The frequencies used by the CHP do not work very well with
portables. So the cruisers have a low-power "repeater" in them
that allows the officers portable to transmit back through the
cars radio. If you monitor this channel, you can hear both sides
of the conversation. The extender channel is the same all up and
down California, so it is useful anywhere.

The frequencies you would be interested in are:

"Office" Base

Redwood City: 42.08MHz "91"
San Jose: 42.50MHz "24"
Extender: 154.905MHz

For more concise listings, dig around this site:

http://w5gb.nmsu.edu/kc5kto/localfrqs/california/ca.html

Note: The bases are fairly strong and easy to receive. But the low-band signals are very hard to receive with a portable inside a car. You will need an external antenna. An old magnet mount CB antenna works great.

--

You can receive the mobiles under three basic conditions:

Worst: With the "built-in" antenna, or worse, the rubber-duck antenna, the mobiles must be within a mile or two.

Better: An outdoor "all-band" antenna: This will extend the range to about 10 miles.

Best: An outdoor "CB" or VHF-low ground-plane with the radials cut to 66".

Personally, I just monitor the base frequency. The dispatchers repeat everything and if the mobiles need to talk to one-another, they come up on the base frequency anyways. So don't loose any sleep over not being able to hear the mobiles.

But do keep an ear on the "extender" frequency, especially if you live near any 24 hour resteraunts near the freeway (Denny's, CoCo's). They turn on their extenders when they go for their "code-7".

Good Luck!

Cheers,
Paul Grohe

The part I don't understand is why anyone, especially on a "electronics"
newgroup would actually walk into a Radio Shack in the first place!

Even their wire is sub-standard.
Tom

It depends on how old the unit is. The cellular mod for the original 760XLTs was very simple, you just snipped one wire, but that changed after early 1994 when the amendment to the ECPA went into effect.

Is there some law that RS may be violating

question mark.

When a customer to be goes into any store and
pays cash is not this an anonymous sale?

Pay and leave without any further questioning
by people who are in a ROTE-FRAME of mind.

Should not they pay you for your time in
asking you info for their marketing purposes?

Cash is paid and your anonymity is conferred by
some law. There must be something that says the
store is in violation of buyer's rights or in
violation of my right to privacy when I am asked
for my i.d. in order to fulfill their reasons for
holding me in check while they ask personal info
from me.

Any legal ears listening here.

question mark.

7065. Need help on unwanted signal

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: Jim Hopkins <jhopkins@LMCO.com>
Message-ID: <333FDD6A.4396@LMCO.com>
Source record: 202365

I have a Sportscat 150 scanner and when I listen in the approximate range of 500 - 512 mhz, I get a signal that sounds like a FAX machine. It comes in on all frequencies in this range. This thing is on 24 hours a day and 7 days a week. Since all my county stuff I want to listen to is in the 506 - 507 mhz range, this creates a huge problem! I have heard it at lower frequencies, I believe, in the 400 mhz range also. It identifies iself in morse code on the half-hour as KNKM749 AND KNKK636. I don't have access to the FCC files; can anyone identify who this is, what their actual frequency is, where they're located and what their purpose is?? Why the two IDs, is one a repeater?

Now on to my next question, assuming someone can identify who this is, how can I eliminate this problem? Would it be possible to build a low-loss notch filter at their actual operating frequency and install it in-line with the antenna to eliminate this problem?

Any help on this one would be appreciated. If I turn the antenna in such a way I can null out the signal at times but this is only helpful when I don't want to move or carry the scanner around. Thanks again!!

If you want to e-mail me: james.hopkins@lmco.com

Dave- Pick up a copy of Monitoring Times and look for an item called the SKy Scan Desk Top antenna, that may work out for you. It works good for me, but I am on pretty flat terrain so their are no mountains to block the signals.

7068. Re: bincancel:10 large binaries:AR1017:@@NCM

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: red@redpoll.mrfs.oh.us
Message-ID: <ARMM-Report-1017.a@redpoll.mrfs.oh.us>
Source record: 202368
Cross-posted to: alt.retromod,misc.jobs.offered,rec.arts.movies.production,rec.autos.sport.misc,rec.radio.scanner,rec.sport.baseball.college,rec.sport.pro-wrestling,rec.sport.snowmobiles,soc.culture.iranian,soc.culture.singapore

Large binary posts do not belong in unmoderated discussion groups.

Please read this entire message, the Bincancel FAQ, and the complete
report (see below) before following up to or responding to this article.

As a service to, and with the cooperation of, other news administrators,
I run a program that searches for, and issues advisory cancels for,
large binaries in the akr, biz, comp, humanities, misc, news, nz, rec,
sci, soc, and talk hierarchies.

I have issued 10 cancels for large binary files (average size 226,536
characters - total size 2,265,363 characters) posted to 9 different
unmoderated discussion groups in the misc, rec, and soc hierarchies
as follows:
2 rec.sport.pro-wrestling
1 soc.culture.singapore
1 soc.culture.iranian
1 rec.sport.snowmobiles
1 rec.sport.baseball.college
1 rec.radio.scanner
1 rec.autos.sport.misc
1 rec.arts.movies.production
1 misc.jobs.offered

This pointer is being posted to each affected group listed above.
Follow-ups are directed to news.admin.net-abuse.usenet.

If you want to see exactly which file was deleted from a particular
group, read the full report in news.admin.net-abuse.bulletins. The
full report can also be found in news.lists.filters and alt.retromod.
Look for AR1017 in the subject, or, if your reader supports it,
use <URL:news:ARMM-Report-1017@redpoll.mrfs.oh.us>.

The criteria used to search for this batch of large binaries were:
NEWSGROUPS: Unmoderated groups in the akr, biz, comp, humanities,
misc, news, rec, nz, sci, soc, and talk hierarchies
(except for comp.binaries.apple2, comp.bugs.2bsd, and
rec.games.bolo)
BINARY: base64, binhex, uuencode, and xbtoa encoded files, etc.
SIZE: > 100,000 characters [(size * (# of parts - .5)), if multi-part]

For more information about binary cancels, see the bincancel FAQ,
<URL:http://www.southcom.com.au/~geniac/binfaq.txt>.

Please direct public feedback to news.admin.net-abuse.usenet and private feedback to red@redpoll.mrfs.oh.us. In the interests of preventing cross-posted flame wars, please honor the followup-to header and do *not* cross-post your reply to multiple groups. Thank you for your cooperation.

Best wishes,
Dick

>
> story house which will require only about 25' to 30' of coax.

You won`t like the discone. It has very little gain. there is no reason to use
a discone, since you will be scanning a relatively narrow range of frequencies.

> Is
>
> RG-213/U the best choice coax? Since I will have to use a PL-259 to BNC
>
> adapter at the back of the scanner, would I have less total losses if I
>
> used RG-58 or RG-59 so I would not need to use an adapter?

rg 58 or 59 will give you so much loss per foot that the adapter`s loss looks
tiny by comparison ! Belden 9913 or similar would be what to use. You cannot
tolerate the kind of loss in a scanner that you can in a CB radio installation.

> Maybe I
>
> should change the BNC connector at the back of the scanner to a SO-259?

Well, you run a ground wire from a ground rod driven into the ground at the
base of the antenna pipe to the pipe. Coax type lightning arrestors are
available , from various sources, if you are worried about lightning.

> VHF-hi and UHF signals.
>
> Howard C.

Yes, you can use TV signal amps for scanning. They are indeed cheaper
than scanner amps, although they don't go up as high in frequency as
some of the scanner ones do. (TV amps about 50-900 MHz or so).
73,
Mike

Newsgroup: rec.radio.scanner
Date: 1997-03-31 00:00:00 UTC
From: deforger@aol.com
Message-ID: <19970331004300.TAA26550@ladder01.news.aol.com>
Source record: 202421

You can find the headphones your looking for at the race.I own a set form Race-scan communications in Tenn.800-441-2841.They keep the noise down and also have a volume control.Also there is Racing Electronics in NJ 800-272-7111.Both companys usually show up at the event with their trailers.I've read some of the other ideas posted but find ear buds and shooting muffs a pain at the track.Also depending on what scanner you have it may have to be modified for added volume through the headphone jack.I use the Bearcat 2500xlt which has a headphone jack(3/32 plug)and an external speaker plug(1/8 plug).I use the external speaker plug which required no modification for extra volume.But if you need your scanner modified because of the 3/32 plug,both companys usually do the modification on site.
Well i hope this helps you.Enjoy the race.

You can refuse to give your name if you use cash.

They will still try to get it from you, but in the end they will give up
and sell you whatever you want without the name.

I do this to limit my junk mail. I'm so traceable I don't care if RS
gives my name to the FBI.

I heard that the Bearcat 760xlt has been or will soon be discontinued.
Has anyone else heard this. Has anyone heard of a replacement for it? I
was considering purchasing one but I may wait if something better is
coming soon.

>them my phone number.

when they become hostile, ask yourself this:

"is this worth the aggravation?"

and then walk out. you did not need it that much
at that store,did you?

or people: find out your local Circuit city or Good guys
and their phone number and even memorize a name of a few
CC or GG sales clerks on commission: give this to the
RS droid in the form of a card: make them up on your
printer and make a nice presentation and put on it:

Information for Radio Shack Sales Droids

1. name of a CC or GG guy or gal
2. address
3. phone number...

Those of you who have LABEL PRO or Labels in your word
processor can do this quite easily and have some fun

My Life History For Radio Shack

what titles do you readers have for this Heading to give
them....?

This way...no aggravation and no walking out.

bill conduit
etc.
